Results of Investigation of Per- and Polyfluoroalkyl Substances in Off-Base Drinking Water—Ault Field, Area 6, and Outlying Landing Field Coupeville, Naval Air Station Whidbey Island, Washington

PREPARED FOR: Naval Facilities Engineering Systems Command (NAVFAC) Atlantic
NAVFAC Northwest
Naval Air Station (NAS) Whidbey Island

PREPARED BY: CH2M HILL, Inc. (CH2M)

DATE: December 2020

Introduction

CH2M HILL, Inc. (CH2M) was contracted by Naval Facilities Engineering Systems Command (NAVFAC), to evaluate impacts of potential releases of per- and polyfluoroalkyl substances (PFAS) to groundwater at Naval Air Station (NAS) Whidbey Island and collect drinking water samples for PFAS analysis from private drinking water sources near Ault Field and Area 6 located in Oak Harbor, Washington and Outlying Landing Field (OLF) Coupeville located in Coupeville, Washington (**Figure 1**). This technical memorandum (TM) presents the results of the drinking water investigation, which was performed in October 2019 through September 2020 in accordance with the *Sampling and Analysis Plan, Investigation of Per- and Polyfluorinated Substances in Off-Base Drinking Water, Ault Field, Area 6, and Outlying Landing Field Coupeville* (SAP) (CH2M, 2020a). CH2M prepared this TM for the Department of the Navy (Navy) under the NAVFAC Comprehensive Long-term Environmental Action (CLEAN)—Navy 9000 Contract N62470-16-D-9000, Contract Task Order 4470.

Per- and Polyfluoroalkyl Substances

PFAS are manufactured chemicals that have been used since the 1950s in many household and industrial products because of their stain- and water-repellant properties. Within the Navy's operations, PFAS are most commonly associated with aqueous film-forming foam (AFFF) used primarily for firefighting (including emergency response, equipment testing and/or training, and fire suppression systems in buildings). PFAS can also be found in vapor suppression systems and in waste streams. PFAS are now present virtually everywhere in the world because of the large amounts that have been manufactured and used. Once these compounds are released to the environment, they break down very slowly. PFAS are considered "chemicals of emerging concern" which have no Safe Drinking Water Act (SDWA) regulatory standards or routine water quality testing requirements. The United States Environmental Protection Agency (USEPA) is studying PFAS to determine if national regulation is needed. The State of Washington does not have an established state standard or promulgated screening value for any PFAS constituent in either groundwater or drinking water.

USEPA issued the third Unregulated Contaminant Monitoring Rule (UCMR 3)¹ in May 2012. The UCMR 3 required monitoring, between 2013 and 2015, for 30 substances, of all large public water systems (PWSs) serving more than 10,000 people and 800 representative PWSs serving 10,000 or fewer people. Six PFAS compounds were

¹ The 1996 SDWA amendments require that once every 5 years USEPA issue a new list of no more than 30 unregulated contaminants to be monitored by PWSs.

included in the UCMR 3 contaminant list; of these six PFAS, the USEPA has issued health advisories² for only two, perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS), and has published toxicity values for another, perfluorobutane sulfonate (PFBS). Health advisories are not regulatory standards. They are health-based concentrations that should offer a margin of protection for all Americans throughout their lives from adverse health effects resulting from exposure to PFOS and PFOA in drinking water. The USEPA health advisories for lifetime exposure are 70 nanograms per liter (ng/L) for PFOS, 70 ng/L for PFOA. When both PFOS and PFOA are found in drinking water, the combined concentrations should not exceed 70 ng/L (USEPA, 2016a, 2016b).

Navy Policy

The Navy issued a policy in 2014 (Navy, 2014) requiring on-Base drinking water sampling for PFOA and PFOS for bases where groundwater was used as drinking water and PFAS could have been released nearby. Under the policy, all installations not previously tested under UCMR 3 that produce drinking water from on-Base sources and have an identified or suspected PFAS release within approximately 1-mile upgradient of the drinking water source, were required to sample their finished drinking water by December 2015. In June 2016, the Navy issued additional policy (Navy, 2016b) that required all Navy bases not previously tested under UCMR 3 or the 2014 policy (Navy, 2014) to test their finished drinking water, regardless of the water source (on-Base or municipal) or potential/known source of a PFAS release to the environment. Ault Field's water is supplied by the City of Oak Harbor, and Oak Harbor's water is supplied by the City of Anacortes. The drinking water provided by the City of Anacortes, the City of Oak Harbor, and Ault Field was sampled under UCMR 3, and PFAS were not detected. Two on-Base drinking water wells at OLF Coupeville were sampled for PFAS in October 2016 (ALS Environmental, 2016). No PFAS were detected in the on-Base drinking water well located in the northern portion of the site near Building 11. PFAS were detected in the on-Base drinking water well in the southwestern portion of the OLF near Building 2807 (ALS Environmental, 2016).

In June 2016, the Navy also issued a policy (Navy, 2016c) to identify and prioritize sites for investigation of drinking water resources, on- or off-Base, that are thought to be vulnerable to PFAS contamination from past Navy releases of PFAS, with a focus on release of AFFF. Sites with drinking water sources (water supply wells, surface water bodies used for drinking water, and reservoirs) within 1 mile downgradient of known or potential releases of PFAS were assigned the highest priority. Drinking water near these high-priority, Priority 1 sites was required to be sampled within fiscal year 2017.

Priority 1 sites at NAS Whidbey Island in Island County, Washington, included the Ault Field Runway Ditches/Former Runway Fire Training School (Areas 16/31), Ault Field Current Fire Training Area, and Outlying Landing Field (OLF) Coupeville. Although not identified as a Priority 1 site for PFAS investigation, the Area 6 Former Landfill was added to off-Base drinking water investigation due to its history as a municipal and industrial waste disposal facility consistent with possible releases of PFAS. The Navy has sampled more than 280 drinking water wells downgradient from Ault Field, Area 6, and OLF Coupeville since November 2016. From November 2016 to October 2017, initial investigative drinking water sampling for PFAS was conducted for drinking water wells downgradient of identified priority 1 sites at Ault Field and OLF Coupeville (CH2M, 2017a). Following the initial drinking water sampling investigation, a routine, semi-annual drinking water sampling program was conducted from October 2017 to April 2019 for drinking water wells with exceedances of the USEPA health advisories and surrounding parcels near Ault Field and OLF Coupeville under the *Sampling and Analysis Plan Investigation of Per- and Polyfluoroalkyl Substances in Drinking Water Ault Field and Outlying Landing Field Coupeville* (CH2M, 2017b, 2018b). The sampling program described in the present report is a continuation of the semi-annual sampling program, with the addition of off-Base locations near Area 6 (CH2M, 2020a).

² USEPA issued lifetime health advisories for PFOS and PFOA in May 2016, superseding the 2009 provisional health advisories. USEPA has not issued health advisories for any other PFAS.

Conceptual Site Model

This section presents a brief history of NAS Whidbey Island, background information about potential PFAS source areas at Ault Field, Area 6, and OLF Coupeville, a description of the environmental setting, and an evaluation of drinking water sources in the vicinity. This information comprises the conceptual site model, which describes the relationship between potential contaminant sources and receptors through potential or actual migration and exposure pathways.

Naval Air Station Whidbey Island Background

NAS Whidbey Island is comprised of three separate installations, Ault Field (includes Area 6), OLF Coupeville, and Seaplane Base (**Figure 1**). NAS Whidbey Island was commissioned on September 21, 1942, and currently supports several types of aircraft, 7,600 military personnel, and 1,300 civilian personnel. The mission of NAS Whidbey Island is to maintain and operate naval aircraft and aviation facilities and provide associated support. The land surrounding Ault Field, Area 6, and OLF Coupeville is used for various agricultural, recreational, residential, and industrial purposes (CH2M, 2020a).

Ault Field

Ault Field is located approximately 50 miles north of Seattle, WA on Whidbey Island directly north of Oak Harbor, WA (**Figure 1**). Ault Field supports Navy tactical electronic attack squadrons flying the EA-18G Growler, the P-3 Orion Maritime Patrol squadrons, and two Fleet Reconnaissance squadrons flying the EP-3E Aries.

In 2015, three areas where AFFF may have been stored, handled, or released at Ault Field (Hangar 5, the Runway Drainage Ditch System [Area 16] and Former Runway Fire School [Area 31]) were investigated within the shallow portion of the aquifer (**Figure 2**) (Navy, 2016a). Sample results indicated the presence of PFAS in groundwater near Hangar 5 and Area 31 (Navy, 2016a).

A preliminary assessment (PA) was conducted in 2018 at Ault Field and identified 35 potential PFAS source areas, including Hangar 5, Area 16, and Area 31. Additionally, the PA identified Area 6 Landfill as a potential PFAS source area; however, PFAS at Area 6 is being investigated independent of Ault Field and is treated as a separate area for the drinking water investigation.

In 2019, Phase 1 of a site inspection (SI) was conducted and confirmed the presence of PFAS in groundwater near four of the 35 potential PFAS source areas:

- 1959-1969 Landfill (Area 2)
- 1968-1970 Landfill (Area 3)
- Current Firefighting School
- Former Clover Valley Fire School (Area 29)

The Phase 1 SI was also conducted in areas between confirmed PFAS release areas and the two off-Base residential parcels near Ault Field where PFAS have been detected in drinking water above the USEPA health advisories. Phase 2 of the SI is ongoing and involves further investigation of PFAS source areas identified in the PA.

Area 6

Area 6 is a 260-acre tract in the southeastern corner of Ault Field (**Figure 1**). Area 6 is bordered by Ault Field Road to the north, State Highway 20 to the east, and the Oak Harbor landfill on the south and southwest. Privately-owned forested or logged land, and a former commercial sand and gravel quarry operation, are located immediately west of Area 6. Currently, Area 6 is mostly vacant and composed of a compost facility, an approximate 40-acre engineered landfill cap, and a stormwater detention basin. It also includes various groundwater monitoring and extraction wells and a groundwater treatment plant (URS, 2015). The off-Base land surrounding Area 6 is used for a combination of residential and commercial purposes.

From 2017 to 2019 an SI and off-Base drinking water sampling investigation was conducted at Area 6 for PFAS. PFAS was detected in 17 groundwater monitoring wells located on-Base at Area 6. Of the 17 groundwater monitoring wells with PFAS detections, one exceeded the USEPA health advisory for PFOA. The drinking water investigation is summarized in the Previous Off-Base Drinking Water Investigation section below. A remedial investigation at Area 6 will be conducted.

OLF Coupeville

OLF Coupeville is a Navy airfield associated with NAS Whidbey Island, located 2 miles southeast of Coupeville, in Island County, Washington (**Figure 1**). It is composed of a paved runway oriented north-northwest to south-southeast. The paved runway is approximately 5,400 feet long and is bordered by grass maintained by mowing operations extending to the public roads. A runway safety area extends approximately 3,300 feet south of the runway footprint and is bordered by trees and residential parcels. The airfield was commissioned for use by the Navy in 1943 and provides support for day and night field carrier landing practice operations by the Navy for aircraft based out of NAS Whidbey Island.

In 2016, PFAS were first detected in one of the on-Base drinking water wells located in the southwest portion of the OLF Coupeville near Building 2807 during groundwater sampling activities conducted under the Navy's June 2016 Policy Memo (DASN (E), 2016) (**Figure 2**). As a result, an expedited SI was conducted, and 31 groundwater monitoring wells were installed and sampled for PFAS in 2016 and 2017 (CH2M, 2019d). Of the 31 groundwater monitoring wells, PFAS was detected in 13 of the wells and PFOA and/or PFOS exceeded the USEPA health advisories in 6 of the 13 groundwater monitoring wells.

In 2018, a PA was conducted for OLF Coupeville and identified 2 potential PFAS source areas, Building 2709 (Crash Truck Shelter) and Facilities 1, 2, and 11 (Control Tower, Airfield Operations Building, and Potable Water Well Pump House). As a result of the PA findings and the expedited SI results, a supplemental SI is ongoing at OLF Coupeville to further refine the conceptual site model and identify PFAS source areas and migration pathways. A remedial investigation will be conducted at OLF Coupeville.

Previous Off-Base Drinking Water Investigations

Off-base drinking water sampling near Ault Field and OLF Coupeville was initially conducted from November 2016 to June 2017 (CH2M, 2019b,c). Sampling was conducted under a phased, voluntary sampling program (**Figures 2 and 3**). The initial sampling areas³ included off-Base drinking water wells within a 1-mile radius of sites with suspected or confirmed usage of AFFF. Subsequent sampling phases were implemented with expanded sampling areas based on the results of previous phases. Three sampling phases were conducted in areas adjacent to Ault Field, during which PFOA and/or PFOS were detected above the USEPA health advisories in two off-Base wells. In response to PFAS detections in a stormwater drain near Hangar 6 and in an associated stormwater drainage system, a fourth sampling phase was conducted from January to February 2019, during which no additional off-Base drinking water wells exceeded the USEPA health advisories for PFAS. Two sampling phases were conducted in areas adjacent to OLF Coupeville, during which PFOA and/or PFOS were detected above the USEPA health advisories in seven off-Base wells.

Beginning in October 2017, a semiannual sampling program was implemented for Ault Field and OLF Coupeville that included all off-Base drinking water wells that had previously had detections of PFOA and/or PFOS (either above or below the USEPA health advisories) and wells on parcels adjacent to those with wells that had previously exceeded the USEPA health advisories for PFOA and/or PFOS. These adjacent properties included some wells that had not previously been sampled during the phased investigation. During the October 2017 event, PFOA was detected above the USEPA health advisory in a well on one of these adjacent properties in Coupeville that had not

³ Subsequent to the initial round of drinking water sampling performed in 2016 and 2017, a preliminary assessment (CH2M, 2018) was conducted at Ault Field and identified 35 potential source areas (including Area 6) with suspected or potential releases requiring further investigation. The initial 1-mile downgradient boundary and subsequent $\frac{1}{2}$ miles step-outs defined in the 2016 and 2017 investigation was established from Area 16, Area 31, and the Current Fire Training School; however, the sampling areas also encompass residences within the 1-mile downgradient direction of potential PFAS source areas identified in the PA.

previously been sampled for a total number of eight drinking water wells above the USEPA health advisories in Coupeville.

From February 2018 to April 2019, the Navy conducted drinking water sampling at residences near Area 6 (CH2M, 2020b). Drinking water sampling results from this investigation indicated that PFAS are present above the USEPA health advisories in five drinking water wells. In October–November 2019, an additional drinking water well with PFAS present above the USEPA health advisories was identified for a total of six drinking water wells above the USEPA health advisories near Area 6.

Temporary interim solution measures have been taken to supply potable water to residences where the drinking water results exceeded the USEPA health advisories. For most residences, this consists of bottled water delivery which commenced in December 2016 and is ongoing. At one of the residences, a point-of-use water treatment system was installed in May 2018 which treats the contaminated well water to non-detectable levels of PFAS and provides potable water to the residence (CH2M, 2019a). This residence no longer receives bottled water. Additionally, seven residences near OLF Coupeville (4 residences with single party wells and 3 residences that share a multi-party well) were connected to Town of Coupeville water in March 2020. These residences will continue to receive bottled water until final project acceptance.

Geology and Hydrogeology

Ault Field and Area 6

Whidbey Island lies within the Puget Lowland, a topographic and structural depression between the Olympic Mountains and the Cascade Range. The surface soil in the vicinity of Ault Field and Area 6 primarily consists of artificial fill, post-glacial deposits, glaciomarine drift, and glacial deposits. Artificial fill, consisting of coarse- or fine-grained material, underlies the runway areas. Post-glacial deposits, consisting of peaty sand and silt, are generally found in the low-lying marshy areas (Navy, 1994).

There are three main aquifers that underlie Ault Field and Area 6 that are referred to as the shallow aquifer, intermediate aquifer, and sea-level aquifer. Ault Field is located in a valley, with elevated areas to the southwest, northeast, and southeast of the field. In general, groundwater flow in the shallow aquifer mimics topography. In the northwestern portion of Ault Field groundwater flow in the shallow aquifer flows west-northwest toward the Strait of Juan de Fuca (Navy, 1994). Across the remainder of the Ault Field, east of the runway, groundwater generally flows to the east, northeast, and southeast toward Clover Valley Stream, Clover Valley Lagoon, and Dugualla Bay. West of the runway and current Firefighting School, there is likely a component of flow to the west toward the Strait of Juan de Fuca. Groundwater flow in the intermediate and deep aquifers at Ault Field and is not well known due to limited monitoring wells screened within the intermediate and deep aquifers.

At Area 6, groundwater flow in the shallow aquifer predominantly flows to the south; however, there is a potential local southwesterly component of groundwater flow in the northwestern corner of Area 6. Groundwater flow in the intermediate aquifer at Area 6 is predominantly to the southeast, while groundwater flow within the deep aquifer ranges from the southeast to southwest (URS, 1993).

OLF Coupeville

Surficial geology at OLF Coupeville consists of the Partridge Gravel, which is composed of sand, gravel, and sand-gravel mixtures with minor inter-layered silt and silty sand. Bedding planes in the formation generally dip toward the west in the vicinity of OLF Coupeville. Undivided Pleistocene deposits lie beneath the Partridge Gravel. These deposits consist of poorly sorted, mildly compact sands.

There are three designated hydrogeologic zones present underneath OLF Coupeville that are referred to as the shallow zone, intermediate zone, and deep zone (CH2M, 2018). The shallow, intermediate, and deep elevation zone designations do not indicate three discrete aquifers or water-bearing zones. Rather, the shallow, intermediate, and deep elevation zones are located within the single aquifer system. Most local water supply wells are completed in the intermediate and deep elevation zones.

The dominant flow direction in the intermediate zone is to the southwest in the northern portion of the site, shifting to the south-southeast in the southern portion of the site. Groundwater flow in the deep zone is generally to the south. In general, the overall groundwater flow direction appears to be consistent regardless of tidal influence (CH2M, 2018).

Migration Pathways and Potential Receptors and Exposure Routes

Previous investigations of Ault Field, Area 6, and OLF Coupeville have identified releases of PFAS to soil, groundwater and/or stormwater in the areas. PFAS in groundwater and stormwater have migrated off-base and may have resulted in exceedance of the USEPA health advisories for PFOA and PFOS in samples from off-base private drinking water wells.

Drinking Water Source Evaluation

All water for Ault Field and Area 6 is purchased from the City of Oak Harbor, which obtains its water from the City of Anacortes. The Washington Department of Ecology well database (2016) was used as the primary source for evaluating drinking water receptors off-Base, plus individual letters sent to off-Base property owners within the sampling areas. Multiple private and community drinking water wells were identified off-Base within 1 mile of on-Base source areas during the initial drinking water source evaluation conducted as part of the voluntary phased drinking water sampling performed in 2016 and 2017 (2019b; 2020b). Off-Base drinking water wells are located in the phased off-Base sampling areas for Ault Field and Area 6 shown on **Figure 2**.

OLF Coupeville uses two drinking water wells located on-Base, screened within the regional aquifer (178 feet bgs). The Washington Department of Ecology well database was used as the primary source for evaluating drinking water receptors off-Base, plus individual letters sent to off-Base property owners within the sampling areas. Multiple private and community drinking water wells were identified off-Base within 1 mile of on-Base source areas, including the Town of Coupeville (Fort Casey well field and Keystone well) supply wells during the initial drinking water source evaluation conducted as part of the voluntary phased drinking water sampling performed in 2016 and 2017 (2019c). Off-Base drinking water wells are located in the phased off-Base sampling areas for OLF Coupeville shown on **Figure 3**.

Summary of Field Activities

This section provides a summary of field investigation activities conducted for two sampling events, including mobilization and dates of fieldwork, sampling activities, and sample packing and shipping procedures. All field activities were conducted in accordance with the standard operating procedures outlined in the SAP (CH2M, 2020a). Sample collection from private drinking water wells was conducted only at parcels where permission to collect samples was granted by the owner.

Mobilization

For the October 2019-January 2020 sampling event, CH2M staff mobilized to Whidbey Island on October 28, 2019. Scheduled sampling appointments occurred from October 29 through November 8, 2019 at locations in Oak Harbor and Coupeville. Additional mobilizations to Whidbey Island occurred on December 12, 2019, to resample one well due to an error in sample management, and on January 16, 2020, to sample a well that had not been scheduled during the first mobilization.

For the May-September 2020 sampling event, CH2M staff mobilized to Whidbey Island on May 18, 2020. Scheduled sampling appointments occurred from May 18 through May 27, 2020 at locations in Oak Harbor and Coupeville. A second mobilization occurred on June 18, 2020 to resample a well to confirm anomalously high results. Other additional mobilizations occurred on July 31, 2020 and September 3, 2020 to sample locations that were not scheduled during the first mobilization.

Summary of Sampling Activities

The following samples and associated field quality control samples were collected during the October 2019–January 2020 sampling event:

- 11 drinking water samples from off-Base drinking water wells near Ault Field
- 8 drinking water samples from off-Base drinking water wells near Area 6
- 26 drinking water samples from off-Base drinking water wells near OLF Coupeville.

The following samples and associated field quality control samples were collected during the May–September 2020 sampling event:

- 10 drinking water samples from off-Base drinking water wells near Ault Field (includes resample collected in June 2020)
- 8 drinking water samples from off-Base drinking water wells near Area 6
- 23 drinking water samples from off-Base drinking water wells near OLF Coupeville.

Samples were collected in accordance with the Standard Operating Procedure for *Drinking Water Sampling when Analyzing for PFAS*, provided in Attachment A of the SAP (CH2M, 2020a). Drinking water was collected from sample ports near the wells, outside spigots, or faucets inside the homes. Samples were collected directly into Trizma-preserved 250-milliliter, polypropylene sample bottles. Additional sample details are provided in **Tables 1 through 3**.

Quality control samples included field reagent blanks (FRBs), field duplicates (FDs), and matrix spike/matrix spike duplicates (MS/MSDs).

FRBs were collected at each sampling location by pouring lab-certified PFAS-free water pre-preserved with Trizma (provided by the laboratory) into empty sample bottles. Field duplicates were collected in the same manner as regular samples at a rate of one per every ten sample locations. MS/MSDs were collected in the same manner as regular samples at a rate of one per every twenty sample locations.

Sample Packing and Shipping Procedures

Sample bottles were properly labeled, placed into resealable zipper storage bags, then placed into a heavy-duty garbage bag, which was placed into the shipping coolers provided by the laboratory (Vista Analytical Laboratory). The cooler was then packed with ice. A temperature blank provided by the laboratory and the completed chains-of-custody, provided in **Attachment 1**, were included in each cooler. The coolers were shipped via FedEx priority overnight to the laboratory.

Summary of Sample Results

This section provides a brief discussion of the project action limits (PALs), as well as a summary of laboratory results for the drinking water samples collected for analysis of the following 18 PFAS listed in USEPA Method 537.1: PFOA, PFOS, PFBS, n-ethyl perfluorooctanesulfonamidoacetic acid (EtFOSAA), n-methyl perfluorooctanesulfonamidoacetic acid (MeFOSAA), perfluorodecanoic acid (PFDA), perfluorododecanoic acid (PFDoA), perfluoroheptanoic acid (PFHpA), perfluorohexanesulfonic acid (PFHxS), perfluorohexanoic acid (PFHxA), perfluorononanoic acid (PFNA), perfluorotetradecanoic acid (PFTeDA), perfluorotridecanoic acid (PFTrDA), perfluoroundecanoic acid (PFUnA), hexafluoropropylene oxide dimer acid (HFPO-DA), 4,8-dioxa-3H-perfluoromonanoic acid (ADONA), 11-chloroeicosfluoro-3-oxaundecane-1-sulfonic acid (11Cl-PF3OUdS), and 9-chlorohexadecafluoro-3-oxanone-1-sulfonic (9Cl-PF3ONS). This section also includes a data validation summary and usability assessment.

Project Action Limits

As indicated in the SAP (CH2M, 2020a), the PALs for this project are the USEPA health advisories for PFOA, PFOS, and the sum of PFOA + PFOS (70 ng/L). Results will be screened against the USEPA Regional Screening Level (RSL) for PFBS (40,000 ng/L) (based on a hazard quotient of 0.1) (USEPA, 2018); however, no actions will be taken if the results exceed the RSL. This RSL is provided for informational purposes only. EtFOSAA, MeFOSAA, PFDA, PFDoA, PFHpA, PFHxS, PFHxA, PFNA, PFTeDA, PFTrDA, PFUnA, HFPO-DA, ADONA, 11Cl-PF3OUdS, and 9Cl-PF3ONS currently do not have established screening values for comparison. Data will be archived for future comparison if screening values are established.

Ault Field Sampling Results

October 2019-January 2020

A total of 11 drinking water samples were collected from off-Base drinking water wells near Ault Field. Sampled wells included 8 single-residence drinking water wells, 2 multi-party drinking water wells, and 1 backup drinking water well. Of the 11 samples collected during the October 2019-January 2020 event, 1 sample exceeded the PALs for PFOS and the sum of PFOA + PFOS. All samples collected were analyzed for 18 PFAS compounds using USEPA Method 537.1 in accordance with the SAP. A summary of detections and exceedances are provided in **Table 4** and a summary of PFOA and PFOS results for October 2019-January 2020 are shown in **Figure 4**. Raw data is provided in **Attachment 2**.

- **PFBS** – PFBS was detected in 5 samples, ranging from an estimated 2.28 J ng/L in sample WI-AF-1RW28-1119 to 312 J ng/L in sample WI-AF-1RW32-1119. None of the detections of PFBS exceeded the RSL of 40,000 ng/L.
- **PFOS** – PFOS was detected in 4 samples, ranging from an estimated 2.94 J ng/L in sample WI-AF-1RW77-1119 to 7,690 ng/L in sample WI-AF-1RW32-1119. Concentrations in one sample exceeded the PAL for PFOS.
- **PFOA** – PFOA was detected in 5 samples, ranging from an estimated 4.78 J ng/L in sample WI-AF-3RW41-1119 to 51.7 J ng/L in sample WI-AF-1RW32-1119. None of the detections of PFOA exceeded the PAL.
- **PFOA + PFOS** – PFOA and PFOS were detected in 4 samples. The sum of PFOA + PFOS ranged from an estimated 13.7 ng/L in sample WI-AF-1RW77-1119 to 7,742 ng/L in sample WI-AF-1RW32-1119. Concentrations in one sample exceeded the PAL for PFOA+PFOS.

May-September 2020

A total of 10 drinking water samples were collected from off-Base drinking water wells near Ault Field including two samples from WI-AF-1RW32. Sampled wells included 9 single-residence drinking water wells (2 from WI-AF-1RW32) and 1 multi-party drinking water well (**Figure 2**). Of the 12 samples collected during the May-September 2020 event, 2 samples exceeded the PALs for PFOS, PFOA, and the sum of PFOA + PFOS. All samples collected were analyzed for 18 PFAS compounds specified in accordance with the SAP. A summary of detections and exceedances are provided in **Table 4** and a summary of PFOA and PFOS results are shown in **Figure 5**. Raw data is provided in **Attachment 2**.

- **PFBS** – PFBS was detected in 7 samples, ranging from 2.48 ng/L in sample WI-AF-1RW28-0520 to 1,720 ng/L in sample WI-AF-1RW32-0620. None of the detections of PFBS exceeded the RSL of 40,000 ng/L.
- **PFOS** – PFOS was detected in 6 samples, ranging from an estimated 0.85 J ng/L in sample WI-AF-1RW28-0520 to 43,100 ng/L in sample WI-AF-1RW32-0620. Concentrations in 2 samples (both from WI-AF-1RW32) exceeded the PAL for PFOS.
- **PFOA** – PFOA was detected in 6 samples, ranging from 5.70 ng/L in sample WI-AF-1RW12-0520 to 251 ng/L in sample WI-AF-1RW32-0620. Concentrations in 2 samples (both from WI-AF-1RW32) exceeded the PAL for PFOA.

- **PFOA + PFOS** – Both PFOA and/or PFOS was were detected in 6 samples. The sum of PFOA + PFOS ranged from an estimated 7.89 ng/L in sample WI-AF-1RW12-0520 to 43,351 ng/L in sample WI-AF-1RW32-0620. Concentrations in two samples (both from WI-AF-1RW32) exceeded the PAL for PFOA+PFOS.

Area 6 Sampling Results

October 2019-January 2020

A total of 8 drinking water samples were collected from off-Base drinking water wells near Area 6. Sampled wells included 5 single-residence drinking water wells, 2 multi-party drinking water wells, and 1 backup drinking water well. Of the 8 samples collected during the October 2019-January 2020 event, 4 samples exceeded the PALs for PFOS and the sum of PFOA + PFOS. All samples collected were analyzed for the 18 PFAS compounds specified in accordance with the SAP. A summary of detections and exceedances are provided in **Table 5** and are shown on **Figure 4**. Raw data is provided in **Attachment 2**.

- **PFBS** – PFBS was detected in 8 samples, ranging from 21.0 ng/L in sample WI-A06-RW05-1119 to 53.9 ng/L in sample WI-A06-RW14-1119. None of the detections of PFBS exceeded the RSL of 40,000 ng/L.
- **PFOS** – PFOS was detected in 8 samples, ranging from an estimated 2.21 J ng/L in sample WI-A06-RW04-1119 to 203 ng/L in sample WI-A06-RW24-1019. Concentrations in 4 samples exceeded the PAL for PFOS.
- **PFOA** – PFOA was detected in 8 samples, ranging from 24.5 ng/L in sample WI-A06-RW18-1119 to 53.0 ng/L in sample WI-A06-RW24-1019. None of the detections of PFOA exceeded the PAL.
- **PFOA + PFOS** – Both PFOA and PFOS were detected in 8 samples. The sum of PFOA + PFOS ranged from an estimated 6.07 ng/L in sample WI-A06-RW04-1119 to 256 ng/L in sample WI-A06-RW24-1019. Concentrations in 4 samples exceeded the PAL for PFOA+PFOS.

May-September 2020

A total of 8 drinking water samples were collected from off-Base drinking water wells near Area 6. Sampled wells included 5 single-residence drinking water wells, 2 multi-party drinking water wells, and 1 backup drinking water well. Of the 8 samples collected during the May-September 2020 event, 2 samples exceeded the PALs for PFOS and the sum of PFOA + PFOS, while 2 samples exceeded the PAL for the sum of PFOA + PFOS only. All samples collected were analyzed for the 18 PFAS compounds specified in accordance with the SAP. A summary of detections and exceedances are provided in **Table 5** and are shown on **Figure 5**. Raw data is provided in **Attachment 2**.

- **PFBS** – PFBS was detected in 8 samples, ranging from 19.8 ng/L in sample WI-A06-RW20P-0920 to 53.8 ng/L in sample WI-A06-RW14-0520. None of the detections of PFBS exceeded the RSL of 40,000 ng/L.
- **PFOS** – PFOS was detected in 8 samples, ranging from 5.34 ng/L in sample WI-A06-RW04-0520 to 189 ng/L in sample WI-A06-RW24-0520. Concentrations in 2 samples exceeded the PAL for PFOS.
- **PFOA** – PFOA was detected in 8 samples, ranging from 3.98 ng/L in sample WI-A06-RW04-0520 to 56.2 ng/L in sample WI-A06-RW05-0520. None of the detections of PFOA exceeded the PAL.
- **PFOA + PFOS** – Both PFOA and PFOS were detected in 8 samples. The sum of PFOA + PFOS ranged from 9.32 ng/L in sample WI-A06-RW04-0520 to 234 ng/L in sample WI-A06-RW24-0520. Concentrations in 4 samples exceeded PAL for PFOA+PFOS.

OLF Coupeville Sampling Results

October 2019-January 2020

A total of 26 drinking water samples were collected from off-Base drinking water sources near OLF Coupeville. Sampled locations included 19 single-residence drinking water wells, 2 multi-party drinking water wells, 4 Town of Coupeville water supply wells, and 1 sample taken from a post-treatment location at the Town of Coupeville

water treatment plant. Of the 26 samples collected during the October 2019-January 2020 event, 8 samples exceeded the PALs for PFOA and the sum of PFOA + PFOS; however, PFOS was only detected in 1 of the 8 samples. All samples collected were analyzed for 18 PFAS compounds specified in accordance with the SAP. A summary of detections and exceedances are provided in **Table 6** and a summary of PFOA and PFOS results are shown in **Figure 6**. Raw data is provided in **Attachment 2**.

- **PFBS** – PFBS was detected in 12 samples, ranging from an estimated 1.91 J ng/L in sample WI-CV-1RW72-1019 to 167 ng/L in sample WI-CV-3RW10-1019. None of the detections of PFBS exceeded the RSL of 40,000 ng/L.
- **PFOS** – PFOS was detected in 2 samples, ranging from an estimated 9.01 J ng/L in sample WI-CV-1RW90-1119 to 13.4 ng/L in sample WI-CV-2RW04-1019. None of the detections of PFOS exceeded the PAL.
- **PFOA** – PFOA was detected in 10 samples, ranging from an estimated 9.19 J ng/L in sample WI-CV-2RW04-1019 to 425 ng/L in sample WI-CV-3RW11-1019. Concentrations in 8 samples exceeded PAL for PFOA.
- **PFOA + PFOS** – PFOA and PFOS were detected in 2 samples. The sum of PFOA + PFOS ranged from an estimated 22.6 ng/L in sample WI-CV-2RW04-1019 to 425 ng/L in sample WI-CV-3RW11-1019. Concentrations in 8 samples exceeded the PAL for PFOA+PFOS.

May-September 2020

A total of 23 drinking water samples were collected from off-Base drinking water sources near OLF Coupeville. Sampled locations included 17 single-residence drinking water wells, 2 multi-party drinking water wells, 3 Town of Coupeville water supply wells, and 1 sample taken from a post-treatment location at the Town of Coupeville water treatment plant. Of the 23 samples collected during the May-September 2020 event, 8 samples exceeded the PALs for PFOA and the sum of PFOA + PFOS; however, PFOS was only detected in 3 of the 8 samples. All samples collected were analyzed for 18 PFAS compounds specified in accordance with the SAP. A summary of detections and exceedances are provided in **Table 6** and a summary of PFOA and PFOS results are shown in **Figure 7**. Raw data is provided in **Attachment 2**.

- **PFBS** – PFBS was detected in 12 samples, ranging from an estimated 1.43 J ng/L in sample WI-CV-1RW72-0520 to 203 ng/L in sample WI-CV-3RW10-0520. None of the detections of PFBS exceeded the RSL of 40,000 ng/L.
- **PFOS** – PFOS was detected in 8 samples, ranging from an estimated 1.44 J ng/L in sample WI-CV-1RW23-0520 to 13.2 ng/L in sample WI-CV-2RW04-0520. None of the detections of PFOS exceeded the PAL.
- **PFOA** – PFOA was detected in 12 samples, ranging from an estimated 1.26 ng/L in sample WI-CV-1RW72-0520 to 409 ng/L in sample WI-CV-1RW34-0520. Concentrations in 8 samples exceeded PAL for PFOA.
- **PFOA + PFOS** – PFOA and PFOS were detected in 8 samples. The sum of PFOA + PFOS ranged from an estimated 1.26 ng/L in sample WI-CV-1RW72-0520 to 409 ng/L in sample WI-CV-1RW34-0520. Concentrations in 8 samples exceeded the PAL for PFOA+PFOS.

Data Quality Summary

No quality control deficiencies were found that resulted in rejected data points; all data are available for use. The Data Validation Summary Reports are provided in **Attachment 3**.

A double-blind proficiency test (PT) sample was analyzed during the May-September 2020 sampling event. A third-party subcontractor provided a sample spiked with three PFAS compounds (PFBS, PFOA, and PFOS) of known concentrations in laboratory sample bottles. The PT sample was submitted to the laboratory in the same fashion as a field sample along with a corresponding FRB sample containing PT reagent water pre-preserved with Trizma. Recovery of the three spiked PFAS compounds met the acceptance criteria listed on the certificate of analysis provided by the PT provider. The lab reported PFBS at 52.5 ng/L with a certified value of 49.5 ng/L and acceptance range of 29.7-69.3 ng/L. PFOS was reported at 24.2 ng/L with a certified value of 24.2 ng/L and acceptance range of 15.1-35.1 ng/L. PFOA was reported by the lab at 50.5 ng/L with a certified value of 50.2 ng/L and acceptance range of 30.1-70.3 ng/L. There was an additional detection of PFH_nA between the detection limit

(DL) and the limit of detection (LOD), however the corresponding FRB also contained a detection of this compound at a similar concentration. Overall, the PT sample met acceptance criteria.

Conclusions

PFAS were detected in 26 off-Base drinking water supply wells near NAS Whidbey Island in October 2019-January 2020, and PFAS was detected in 29 off-Base drinking water supply wells (including 2 detections from WI-AF-1RW32) in May-September 2020. Of the 26 drinking water wells with PFAS detections in the October 2019-January 2020 sampling event, 8 had detections in exceedance of the PALs for PFOA and the sum of PFOA + PFOS, and 5 had detections in exceedance of the PALs for PFOS and the sum of PFOA + PFOS (for a total of 13 wells with exceedances). Of the 29 drinking water wells with PFAS detections in the May-September 2020 sampling event, 8 had detections in exceedance of the PALs for PFOA and the sum of PFOA + PFOS, 2 had detections in exceedance of the PALs for PFOS and the sum of PFOA + PFOS, 2 had detections in exceedance of the PALs for PFOA, PFOS, and the sum of PFOA + PFOS, and 2 had detections in exceedance of the PAL for the sum of PFOA + PFOS (for a total of 14 wells with exceedances). During the October 2019-January 2020 sampling event, one drinking water well near Area 6, which had not previously been sampled, had concentrations of PFOS and PFOA + PFOS in exceedance of the PALs. This residence was supplied bottled water within 24 hours of receipt of preliminary results in accordance with the SAP. There were no exceedances of the PALs in drinking water wells that had not previously had exceedances for the May-September 2020 sampling event.

Due to the continued detection of PFOA and PFOS in exceedance of USEPA health advisories in drinking water wells near NAS Whidbey Island, further investigation is ongoing to evaluate the on-Base source for detections in off-Base drinking water to evaluate offsite migration pathways of PFAS from Ault Field, Area 6 and OLF Coupeville. Additional off-Base investigation is ongoing (under Navy Contract N62470-16-D-9000, Contract Task Order 4470), to determine the temporal and spatial variability of PFAS in off-Base drinking water wells with previous PFAS detections and wells adjacent to PFAS exceedances. Monitoring will continue for at least 5 years from the initial round of off-Base drinking water sampling to allow for sufficient data collection so that an evaluation of the PFAS data for temporal and spatial trends can be conducted. In accordance with the SAP, residences served by drinking water wells with PFAS exceedances will continue to receive alternate water sources until a long-term solution can be implemented.

20	WI-CV-2RW06-1019	1903877-20	Water

A full data validation was performed on the analytical data for eleven water samples and nine aqueous field blank samples collected on October 29-30, 2019 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method "Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)".

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 10% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

Overall the data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-CV-1FB72-1019	None - ND	-	-	-
WI-AF-3FB41-1019	None - ND	-	-	-
WI-AF-1FB51-1019	None - ND	-	-	-
WI-A06-FB18-1019	None - ND	-	-	-
WI-A06-FB24-1019	None - ND	-	-	-
WI-CV-3FB07-1019	None - ND	-	-	-
WI-CV-3FB10-1019	None - ND	-	-	-
WI-CV-3FB11-1019	None - ND	-	-	-
WI-CV-1FB34-1019	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- MS/MSD samples were not analyzed.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- EDS Samples 11 and 16 were analyzed at a 5X dilution for various compounds due to a high concentration of target compounds. The reporting limits were adjusted accordingly. No action was required.

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-A06-RW24-1019 ng/L	WI-A06-RW24P-1019 ng/L	RPD	Qualifier
PFBS	25.7	29.8	17%	None
PFHxA	49.1	47.0	15%	
PFHpA	7.10	8.43	4%	
PFHxS	381	429	17%	
PFOA	53.0	50.9	12%	
PFOS	203	225	4%	

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Senior Chemist

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

A full data validation was performed on the analytical data for eight water samples and nine aqueous field blank samples collected on October 30-31, 2019 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method "Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)".

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 10% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

Overall the data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-CV-2FB06-1019	None - ND	-	-	-
WI-CV-2FB02-1019	None - ND	-	-	-
WI-CV-1FB14-1019	None - ND	-	-	-
WI-CV-1FB01-1019	None - ND	-	-	-
WI-CV-1FB27-1019	None - ND	-	-	-
WI-CV-1FB25-1019	None - ND	-	-	-
WI-CV-1FB26-1019	None - ND	-	-	-
WI-CV-1FB24-1019	None - ND	-	-	-
WI-CV-1FB23-1019	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- MS/MSD samples were not analyzed.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- EDS Sample 6 was analyzed at a 5X dilution due to a high concentration of PFHxS. The reporting limits were adjusted accordingly. No action was required.

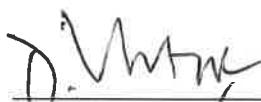

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-CV-1RW23-1019 ng/L	WI-CV-1RW23P-1019 ng/L	RPD	Qualifier
PFBS	17.5	17.2	2%	None
PFHxA	41.4	39.9	4%	
PFHpA	10.6	10.3	3%	
PFHxS	59.3	61.9	4%	
PFOA	62.5	63.5	2%	

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

**DATA VALIDATION SUMMARY REPORT
NAS WHIDBEY ISLAND, WASHINGTON**

Client: CH2M HILL, Inc., Corvallis, Oregon
SDG: 1903884
Laboratory: Vista Analytical Laboratory, El Dorado Hills, California
Site: NAS Whidbey Island, Residential Wells, CTO-4470, Washington
Date: January 15, 2020

PFAS			
EDS ID	Client Sample ID	Laboratory Sample ID	Matrix
1	WI-CV-1RW23P-1019	1903884-01	Water
2	WI-CV-2RW04-1019	1903884-02	Water
3	WI-CV-2FB04-1019	1903884-03	Water
4	WI-CV-1RW22-1019	1903884-04	Water
5	WI-CV-1FB22-1019	1903884-05	Water

A full data validation was performed on the analytical data for three water samples and two aqueous field blank samples collected on October 31, 2019 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning

- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 10% of the detected results in the samples.

Data Usability Assessment

There were no rejections of data.

Overall the data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-CV-2FB04-1019	None - ND	-	-	-
WI-CV-1FB22-1019	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- MS/MSD samples were not analyzed.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

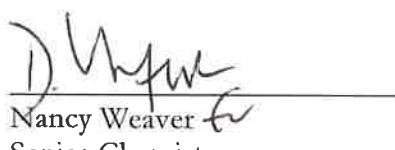

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-CV-1RW23-1019 ng/L	WI-CV-1RW23P-1019 ng/L	RPD	Qualifier
PFBS	17.5	17.2	2%	None
PFHxA	41.4	39.9	4%	
PFHpA	10.6	10.3	3%	
PFHxS	59.3	61.9	4%	
PFOA	62.5	63.5	2%	

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

A full data validation was performed on the analytical data for eight water samples and five aqueous field blank samples collected on November 1-4, 2019 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 10% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

Overall the data are acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedances of QC criteria.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-CV-1FB21-1119	None - ND	-	-	-
WI-CV-1FB40-1119	None - ND	-	-	-
WI-AF-1FB32-1119	None - ND	-	-	-
WI-AF-1FB33-1119	None - ND	-	-	-
WI-CV-3FB17-1119	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- The MS/MSD samples exhibited acceptable percent recoveries (%R) and RPD values except for the following.

MS/MSD Sample ID	Compound	MS %R/MSD %R/ RPD	Qualifier
10	PFBS	228%/OK/59.1	J
	PFHxA	190%/229%/OK	
	PFHxS	2410%/1610%/39.8	None - 4X Rule Applies
	PFOA	134%/148%/OK	J
	PFOS	12700%/6980%/58.1	None - 4X Rule Applies
	9C1-PF3ONS	220%/213%/OK	None - Sample ND
	11C1-PF3OUdS	215%/208%/OK	

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- EDS Sample 10 was analyzed at a 50X dilution due to high concentrations of two compounds. The reporting limits were adjusted accordingly. No action was required.

Field Duplicate Sample Precision

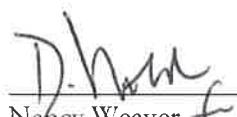

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-CV-1RW21-1119 ng/L	WI-CV-1RW21P-1119 ng/L	RPD	Qualifier
None	ND	ND	-	-

Compound	WI-CV-1RW40-1119 ng/L	WI-CV-1RW40P-1119 ng/L	RPD	Qualifier
None	ND	ND	-	-

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

Results reported to the DL.

LOQ - Limit of quantitation

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

A full data validation was performed on the analytical data for nine water samples and seven aqueous field blank samples collected on November 4-5, 2019 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 10% of the detected results in the samples.

Data Usability Assessment

There were no rejections of data.

Overall the data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-AF-1FB68-1119	None - ND	-	-	-
WI-AF-1FB01-1119	None - ND	-	-	-
WI-AF-1FB40-1119	None - ND	-	-	-
WI-A06-FB08-1119	None - ND	-	-	-
WI-A06-FB04-1119	None - ND	-	-	-
WI-A06-FB03-1119	None - ND	-	-	-
WI-A06-FB19-1119	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- The MS/MSD samples exhibited acceptable percent recoveries (%R) and RPD values.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-AF-1RW01-1119 ng/L	WI-AF-1RW01P-1119 ng/L	RPD	Qualifier
None	ND	ND	-	-
Compound	WI-A06-RW03-1119 ng/L	WI-A06-RW03P-1119 ng/L	RPD	None
	PFBS	43.0	40.3	
	PFHxA	67.7	66.0	
	PFHpA	23.4	22.9	
	PFHxS	129	118	
	PFOA	36.5	35.5

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

10	WI-A06-FB05-1119	1903917-10	Water

A full data validation was performed on the analytical data for five water samples and five aqueous field blank samples collected on November 5-6, 2019 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 10% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

Overall the data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-A06-FB14-1119	None - ND	-	-	-
WI-AF-1FB77-1119	None - ND	-	-	-
WI-AF-1FB28-1119	None - ND	-	-	-
WI-AF-1FB12-1119	None - ND	-	-	-
WI-A06-FB05-1119	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- MS/MSD samples were not analyzed.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

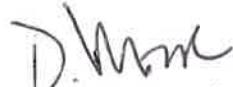

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-AF-1RW77-1119 ng/L	WI-AF-1RW77P-1119 ng/L	RPD	Qualifier
PFHxS	15.7	16.4	4%	None
PFOA	10.8	11.4	5%	
PFOS	2.94	2.19	29%	

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PPoS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

11	WI-CV-1FB67-1119	1903978-11	Water

A full data validation was performed on the analytical data for six water samples and five aqueous field blank samples collected on November 6-8, 2019 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer’s professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 10% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

Overall the data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-CV-1FB09-1119	None - ND	-	-	-
WI-CV-1FB10-1119	None - ND	-	-	-
WI-CV-3FB18-1119	None - ND	-	-	-
WI-CV-1FB20-1119	None - ND	-	-	-
WI-CV-1FB67-1119	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- MS/MSD samples were not analyzed.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-CV-3RW18-1119 ng/L	WI-CV-3RW18P-1119 ng/L	RPD	Qualifier
None	ND	ND	-	-

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Senior Chemist

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

**DATA VALIDATION SUMMARY REPORT
NAS WHIDBEY ISLAND, WASHINGTON**

Client: CH2M HILL, Inc., Corvallis, Oregon
SDG: 1904084
Laboratory: Vista Analytical Laboratory, El Dorado Hills, California
Site: NAS Whidbey Island, Residential Wells, CTO-4470, Washington
Date: January 16, 2020

PFAS			
EDS ID	Client Sample ID	Laboratory Sample ID	Matrix
1	WI-CV-1RW90-1119	1904084-01	Water
2	WI-CV-1FB90-1119	1904084-02	Water

A full data validation was performed on the analytical data for one water sample and one aqueous field blank sample collected on November 20, 2019 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

<u>Analysis</u>	<u>Method References</u>
PFAS	USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer’s professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries

- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 10% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

Overall the data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-CV-1FB90-1119	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- MS/MSD samples were not analyzed.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

Field Duplicate Sample Precision

- Field duplicate samples were not collected.

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

**DATA VALIDATION SUMMARY REPORT
NAS WHIDBEY ISLAND, WASHINGTON**

Client: CH2M HILL, Inc., Corvallis, Oregon
SDG: 1904368
Laboratory: Vista Analytical Laboratory, El Dorado Hills, California
Site: NAS Whidbey Island, Residential Wells, CTO-4470, Washington
Date: January 6, 2020

PFAS			
EDS ID	Client Sample ID	Laboratory Sample ID	Matrix
1	WI-CV-1RW07-1219	1904368-01	Water
1MS	WI-CV-1RW07-1219MS	1904368-01MS	Water
1MSD	WI-CV-1RW07-1219MSD	1904368-01MSD	Water
2	WI-CV-1FB07-1219	1904368-02	Water

A full data validation was performed on the analytical data for one water sample and one aqueous field blank sample collected on December 18, 2019 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer’s professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries

- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 10% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

Overall the data are acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedances of QC criteria.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-CV-1FB07-1219	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- The MS/MSD samples exhibited acceptable percent recoveries (%R) and RPD values except for the following.

MS/MSD Sample ID	Compound	MS %R/MSD %R/ RPD	Qualifier
1	PFHxA	138%/OK/OK	J
	PFHpA	134%/OK/OK	
	PFOA	141%/OK/33.1	
	PFDA	133%/OK/OK	
		None - Sample ND	

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

Field Duplicate Sample Precision

- Field duplicate samples were not collected.

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

**DATA VALIDATION SUMMARY REPORT
NAS WHIDBEY ISLAND, WASHINGTON**

Client: CH2M HILL, Inc., Corvallis, Oregon
SDG: 2000099
Laboratory: Vista Analytical Laboratory, El Dorado Hills, California
Site: NAS Whidbey Island, Residential Wells, CTO-4470, Washington
Date: February 7, 2020

PFAS			
EDS ID	Client Sample ID	Laboratory Sample ID	Matrix
1	WI-AF-1RW104-0120	2000099-01	Water
1MS	WI-AF-1RW104-0120MS	2000099-01MS	Water
1MSD	WI-AF-1RW104-0120MSD	2000099-01MSD	Water
2	WI-AF-1RW104P-0120	2000099-02	Water
3	WT-AF-1FB104-0120	2000099-03	Water

A full data validation was performed on the analytical data for two water samples and one aqueous field blank sample collected on January 16, 2020 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method "Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)".

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA "Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537," November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning

- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 10% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

Overall the data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field blank sample WI-AF-1FB104-0120 was non-detect.

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- The MS/MSD samples exhibited acceptable percent recoveries (%R) and RPD values.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

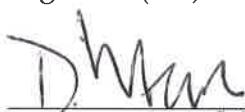

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-AF-1RW104-0120 ng/L	WI-AF-1RW104P-0120 ng/L	RPD	Qualifier
None	ND	ND	-	-

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

A full data validation was performed on the analytical data for nine water samples and seven aqueous field blank samples collected on May 20, 2019 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 100% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

The data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-CV-1FB27-0520	None - ND	-	-	-
WI-CV-1FB25-0520	None - ND	-	-	-
WI-CV-1FB26-0520	None - ND	-	-	-
WI-CV-1FB23-0520	None - ND	-	-	-
WI-CV-3FB18-0520	None - ND	-	-	-
WI-CV-3FB11-0520	None - ND	-	-	-
WI-AF-1FB28-0520	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- The MS/MSD samples exhibited acceptable percent recoveries (%R) and RPD values.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-CV-1RW26-0520 ng/L	WI-CV-1RW26P-0520 ng/L	RPD	Qualifier
None	ND	ND	-	-

Compound	WI-CV-3RW11-0520 ng/L	WI-CV-3RW11P-0520 ng/L	RPD	Qualifier
PFBS	42.8	42.8	0%	None
PFHxA	105	107	2%	
PFHxA	17.6	16.8	5%	
PFHxS	97.1	97.4	0%	
PFOA	295	296	0%	
PFOS	1.49	1.49	0%

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

Results reported to the DL.

LOQ - Limit of quantitation

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxA, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

A full data validation was performed on the analytical data for eight water samples and six aqueous field blank samples collected on May 19-20, 2020 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method "Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)".

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA "Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537," November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 100% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

The data are acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedances of QC criteria.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-A06-FB04-0520	None - ND	-	-	-
WI-AF-3FB41-0520	None - ND	-	-	-
WI-CV-1FB01PP-0520	PFHpA	0.972	U	6
WI-CV-1FB01-0520	None - ND	-	-	-
WI-CV-3FB17-0520	None - ND	-	-	-
WI-CV-1FB07-0520	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- MS/MSD samples were not analyzed.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-AF-3RW41-0520 ng/L	WI-AF-3RW41P-0520 ng/L	RPD	Qualifier
PFBS	57.4	57.6	0%	None
PFHxA	18.0	19.0	5%	
PFHpA	3.58	3.90	9%	
PFHxS	55.6	61.8	11%	
PFOA	5.58	5.71	2%	
PFOS	16.1	17.3	7%	

Compound	WI-CV-1RW07-0520 ng/L	WI-CV-1RW07P-0520 ng/L	RPD	Qualifier
PFBS	31.9	34.4	8%	None
PFHxA	65.0	74.1	13%	
PFHpA	13.7	16.2	17%	
PFHxS	72.0	75.3	4%	
PFOA	193	221	14%	
PFOS	1.71	1.70	1%	

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Senior Chemist

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

A full data validation was performed on the analytical data for nine water samples and seven aqueous field blank samples collected on May 19, 2020 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method "Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)".

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer’s professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 100% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

The data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-AF-1FB01-0520	None - ND	-	-	-
WI-A06-FB05-0520	None - ND	-	-	-
WI-AF-1FB32-0520	None - ND	-	-	-
WI-A06-FB03-0520	None - ND	-	-	-
WI-AF-1FB12-0520	None - ND	-	-	-
WI-AF-1FB68-0520	None - ND	-	-	-
WI-AF-1FB40-0520	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- The MS/MSD samples exhibited acceptable percent recoveries (%R) and RPD values except for the following.

EDS Sample ID	Compound	MS %R/MSD %R/RDP	Qualifier
3	PFHxS	OK/OK/59.3	None for RPD alone

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- EDS Sample 5 was analyzed at various dilutions due to high concentrations of target compounds. The reporting limits were adjusted accordingly. No action was required.

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-A06-RW03-0520 ng/L	WI-A06-RW03P-0520 ng/L	RPD	Qualifier
PFBS	37.2	37.6	1%	None
PFHxA	59.2	58.7	1%	
PFHpA	20.6	19.8	4%	
PFHxS	103	106	3%	
PFOA	33.2	32.0	4%	
PFOS	13.7	12.8	7%	

Compound	WI-AF-1RW12-0520 ng/L	WI-AF-1RW12P-0520 ng/L	RPD	Qualifier
PFBS	4.20	4.24	1%	None
PFHxA	2.35	2.40	2%	
PFHpA	2.02	1.72	16%	
PFHxS	1.68	1.44	15%	
PFOA	5.70	5.25	8%	
PFOS	2.19	2.22	1%

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxs, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

A full data validation was performed on the analytical data for seven water samples and six aqueous field blank samples collected on May 18, 2020 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

<u>Analysis</u>	<u>Method References</u>
PFAS	USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 100% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

The data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-CV-2FB04-0520	None - ND	-	-	-
WI-CV-1FB90-0520	None - ND	-	-	-
WI-CV-1FB22-0520	None - ND	-	-	-
WI-CV-3FB10-0520	None - ND	-	-	-
WI-CV-1FB37-0520	None - ND	-	-	-
WI-CV-2FB06-0520	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- MS/MSD samples were not analyzed.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	WI-CV-1RW90-0520 ng/L	WI-CV-1RW90P-0520 ng/L	RPD	Qualifier
PFBS	45.7	42.4	7%	None
PFHxA	54.5	51.0	7%	
PFHxA	16.5	15.6	6%	
PFHxS	213	205	4%	
PFOA	173	164	5%	
PFOS	10.5	10.2	3%	

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Senior Chemist

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxA, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

A full data validation was performed on the analytical data for six water samples and six aqueous field blank samples collected on May 22-27, 2020 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method "Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)".

Specific method references are as follows:

<u>Analysis</u> PFAS	<u>Method References</u> USEPA Method 537.1
-------------------------	--

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA "Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537," November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 100% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

The data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-CV-1FB14-0520	None - ND	-	-	-
WI-A06-FB24-0520	None - ND	-	-	-
WI-A06-FB19-0520	None - ND	-	-	-
WI-CV-3FB07-0520	None - ND	-	-	-
WI-CV-1FB09-0520	None - ND	-	-	-
WI-CV-1FB72-0520	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- MS/MSD samples were not analyzed.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

Field Duplicate Sample Precision

- Field duplicate samples were not collected.

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Nancy Weaver

Dated: 7/6/20

Nancy Weaver
Senior Chemist

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxs, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

A full data validation was performed on the analytical data for seven water samples and seven aqueous field blank samples collected on May 21-22, 2020 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method "Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)".

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 100% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

The data are acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedances of QC criteria.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-A06-FB14-0520	None - ND	-	-	-
WI-A06-FB18-0520	None - ND	-	-	-
WI-AF-1FB51-0520	None - ND	-	-	-
WI-AF-1FB33-0520	None - ND	-	-	-
WI-CV-2FB02-0520	None - ND	-	-	-
WI-CV-1FB34-0520	None - ND	-	-	-
WI-CV-1FB40-0520	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values except for the following.

EDS Sample ID	Surrogate	%R	Qualifier
3	d5-EtFOSAA	67.2%	UJ

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- The MS/MSD samples exhibited acceptable percent recoveries (%R) and RPD values except for the following.

EDS Sample ID	Compound	MS %R/MSD %R/RDP	Qualifier
11	PFOA	OK/OK/42.0	None for RPD alone

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- EDS Sample 11 was analyzed at a 5X dilution for PFOA. The reporting limits were adjusted accordingly. No action was required.

Field Duplicate Sample Precision

- Field duplicate samples were not collected.

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Senior Chemist

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DATA VALIDATION SUMMARY REPORT NAS WHIDBEY ISLAND, WASHINGTON

Client: CH2M HILL, Inc., Corvallis, Oregon
SDG: 2001308
Laboratory: Vista Analytical Laboratory, El Dorado Hills, California
Site: NAS Whidbey Island, Residential Wells, CTO-4470, Washington
Date: July 8, 2020

PFAS			
EDS ID	Client Sample ID	Laboratory Sample ID	Matrix
1	WI-AF-1RW32-0620	2001308-02	Water
2	WI-AF-1RW32P-0620	2001308-03	Water
3	WI-AF-1FB32-0620	2001308-04	Water

A full data validation was performed on the analytical data for two water samples and one aqueous field blank samples collected on June 18, 2020 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer’s professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination

- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Level IV) data validation was performed with this review including a recalculation of 100% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

The data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-AF-1FB32-0620	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- MS/MSD samples were not analyzed.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- Two compounds in EDS Samples 1 and 2 were analyzed at a 50X and a 100X dilution due to high concentrations. The reporting limits were adjusted accordingly. No action was required.

Field Duplicate Sample Precision

- Field duplicate samples are summarized below. The precision was acceptable.

Compound	WI-AF-1RW32-0620 ng/L	WI-AF-1RW32P-0620 ng/L	RPD	Qualifier
PFBS	1720	1670	3%	None
PFHxA	793	783	1%	
PFHpA	87.3	84.4	3%	
PFHxS	8130	8620	6%	
PFOA	251	247	2%	
PFNA	2.12	2.00	6%	
PFOS	43100	42300	2%	
PFDA	1.17	1.12	4%	

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Senior Chemist

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

**DATA VALIDATION SUMMARY REPORT
NAS WHIDBEY ISLAND, WASHINGTON**

Client: CH2M HILL, Inc., Corvallis, Oregon
SDG: 2001636
Laboratory: Vista Analytical Laboratory, El Dorado Hills, California
Site: NAS Whidbey Island, Residential Wells, CTO-4470, Washington
Date: August 26, 2020

PFAS			
EDS ID	Client Sample ID	Laboratory Sample ID	Matrix
1	WI-CV-1RW92-0720	2001636-01	Water
1MS	WI-CV-1RW92-0720MS	2001636-01MS	Water
1MSD	WI-CV-1RW92-0720MSD	2001636-01MSD	Water
2	WI-CV-1FB92-0720	2001636-02	Water

A full data validation was performed on the analytical data for one water sample and one aqueous field blank sample collected on July 31, 2020 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

Analysis
PFAS

Method References
USEPA Method 537.1

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer’s professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries

- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Stage 2B/4) data validation was performed with this review including a recalculation of 100% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

The data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-CV-1FB92-0720	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- The MS/MSD samples exhibited acceptable percent recoveries (%R) and RPD values.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

Field Duplicate Sample Precision

- Field duplicate samples were not collected.

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Senior Chemist

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

**DATA VALIDATION SUMMARY REPORT
NAS WHIDBEY ISLAND, WASHINGTON**

Client: CH2M HILL, Inc., Corvallis, Oregon
SDG: 2001901
Laboratory: Vista Analytical Laboratory, El Dorado Hills, California
Site: NAS Whidbey Island, Residential Wells, CTO-4470, Washington
Date: October 1, 2020

PFAS			
EDS ID	Client Sample ID	Laboratory Sample ID	Matrix
1	WI-A06-RW20-0920	2001901-01	Water
2	WI-A06-RW20P-0920	2001901-02	Water
3	WI-A06-FB20-0920	2001901-03	Water

A full data validation was performed on the analytical data for two water samples and one aqueous field blank sample collected on September 3, 2020 by CH2M Hill at the NAS Whidbey Island site in Washington. The samples were analyzed under the EPA Method “Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS)”.

Specific method references are as follows:

<u>Analysis</u> PFAS	<u>Method References</u> USEPA Method 537.1
-------------------------	--

The data have been validated according to the protocols and quality control (QC) requirements of the analytical method, DoD Final General Data Validation Guidelines, November 2019, and the USEPA Data Review and Validation Guidelines as follows:

- The USEPA “Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537,” November 2018;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Date Completeness, Case Narrative & Custody Documentation
- Holding times
- Liquid Chromatography/Mass Spectrometry (LC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination

- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Field Duplicate sample precision

A full (Stage 2B/4) data validation was performed with this review including a recalculation of 100% of the detected results in the samples.

Data Usability Assessment

There were no serious deficiencies of data.

The data are acceptable for the intended purposes. There were no qualifications.

Perfluorinated Alkyl Substances (PFAS)

Data Completeness, Case Narrative & Custody Documentation

- The case narrative and chain-of-custody documentation were included in the data package as required. All criteria were met.

Holding Times

- All samples were extracted within 14 days for water samples and analyzed within 28 days.

LC/MS Tuning

- All criteria were met.

Initial Calibration

- All relative standard deviation (%RSD) and/or correlation coefficients criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC sample results are summarized in the table below.

Blank ID	Compound	Conc. ng/L	Qualifier	Affected Samples
WI-A06-FB20-0920	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- MS/MSD samples were not analyzed.

Laboratory Control Samples (LCS)

- The LCS samples exhibited acceptable percent recoveries (%R).

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria.

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- All criteria were met.

Field Duplicate Sample Precision

- Field duplicate samples are summarized below. The precision was acceptable.

Compound	WI-A06-RW20-0920 ng/L	WI-A06-RW20P-0920 ng/L	RPD	Qualifier
PFBS	20.6	19.8	4%	None
PFHxA	23.4	22.8	3%	
PFHpA	4.33	4.11	5%	
PFHxS	141	137	3%	
PFOA	48.3	47.0	3%	
PFOS	30.9	29.9	3%	

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Senior Chemist

Qualifier	Definition
U	The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.
J	The reported result was an estimated value with an unknown bias.
J+	The result was an estimated quantity, but the result may be biased high.
J-	The result was an estimated quantity, but the result may be biased low.
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a "tentative identification."
NJ	The analyte has been "tentatively identified" or "presumptively" as present and the associated numerical value was the estimated concentration in the sample.
UJ	The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.
X	The sample results (including non-detects) were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project quality control criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (which should include a project chemist), but exclusion of the data is recommended.

DL - Detection Limit

LOD - Limit of Detection

LOQ - Limit of quantitation

Results reported to the DL.

When reported, PFHxA, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.
