Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Nancy Schultz  
728 Derby Way Drive  
Wentzville, MO 63385

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

Thank you.

Navy jets fly over with deafening noise. It is very frightening for wildlife. Wilderness lands are not empty. Wilderness designation is meant to protect and sustain wildlife, and provide natural spaces, not flyover panic. Don't do it!

Sincerely,  
Frederick Tuck

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
O Lewis

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

**Date:** Thursday, February 15, 2024 8:56:22 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Lily Turner  
110 Alpine Village Rd  
Harrison, ME 04040

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Ted Wheelock

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Gabriela Romanow  
1010 Memorial Dr.  
Cambridge, MA 02138

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Kristin Kokal

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

**Date:** Thursday, February 15, 2024 8:51:35 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Andrea Rohr  
Beuthener Str. 6  
Frankfurt, DE-HE 60598

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Meaghan Leavitt

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

I would like to request that you do not extend the boundaries. By doing so, this action would disrupt wildlife. We must be cognizant of the fact that we share this planet with numerous other species. What humans do, affects everything on Earth.

Sincerely,  
Elizabeth Cumberbatch

**Date:** Thursday, February 15, 2024 8:49:57 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Cindy Ferguson  
3609 Bradshaw Rd  
Sacramento, CA 95827

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

The law regarding Wilderness is very clear. There can be no disturbance to the natural state in Wilderness areas. The noise from jet aircraft is clearly a contravention of this requirement.

Sincerely,  
Sam Butler  
8134 Westlawn Ave  
Los Angeles, CA 90045

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

This would have a huge impact on the wildlife and add pollution (noise and air) that will harm wildlife and plant life along with any people that enjoy the wilderness there. Please take NO action and do not allow this extension to go forward.

Sincerely,  
Diane Pierce

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Michael Madden  
50 Germonds Rd  
New City, NY 10956

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Madeleine Pabis

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

**Date:** Thursday, February 15, 2024 8:47:51 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Barbara Toshalis  
4305 Persianwood Dr  
Kalamazoo, MI 49006

Thank you.

I suggest that you consider scheduling jet training exercises over and around the Trump compound (aka "Mar-a-Lago) in Florida and other Trump owned properties and golf courses. These places and people seem to enjoy alot of unpleasant noise.

Sincerely,  
Bill Hughes

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

While the boundaries of these two new proposed airspaces would be the same (the difference in the two airspaces being the vertical height, as the ATCAA would sit atop the MOA), they would significantly overlap both the Pasayten Wilderness and Lake Chelan-Sawtooth Wilderness. The noise from the growler jets would startle wildlife and shatter solitude and silence in both Wildernesses.

Sincerely,  
Margret Cifaldi

**Date:** Thursday, February 15, 2024 8:47:25 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Tony Menechella  
725 Green Wilson Rd  
Frankfort, KY 40601

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

We need to keep our wilderness wild. Many people go to the wilderness to get away from civilization, and jets flying around would ruin the solitude and sense of escape. We also need to remember that we share the planet with animals who live there.

Sincerely,  
Michelle Carter

**Date:** Thursday, February 15, 2024 8:45:58 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Marc Harshman  
43 Romney Road  
Wheeling, WV 26003

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
John Bronson  
43315 Gatewood St

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

**Date:** Thursday, February 15, 2024 8:44:31 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Stephanie Larro

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Pam Murphy

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

**Date:** Thursday, February 15, 2024 8:43:34 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Anne Cutler  
18278 Kirby Drive  
Tinley Park, IL 60487

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Congress has stipulated that silence and solitude are to be preserved in our wilderness spaces. They are precious and protected.

Moreover, those most eager to find them are most likely to come to the wilderness during the week, not the weekends.

Sincerely,  
Ben Beckley

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Solitude and quiet are two values of the wilderness experience, as demonstrated in the Great Smoky Mountains National Park, and jets, even at heights, tend to shower the earth with sound.

NATIONAL GEOGRAPHIC points out that contrails are toxic, and p

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

We must protect our wilderness areas & keep them natural & pristine. When they are gone, they are gone forever.

Sincerely,  
Marilyn Evenson

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

The impact of growler noise on the wildlife in the wilderness areas is immensely damaging. Irregular, sudden bursts of loud sounds create ongoing stress that disrupts normal behavior patterns and weakens health.

Sincerely,  
Wendy Roedell

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Jesse Kessler  
68 Miles Pond Road  
North Sandwich, NH 03259

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Scott Thurman  
2951 Satellite Blvd Apt 826

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
MaryAnn Stanislowsky

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Unfortunately, the Draft EA inadequately analyzes impacts to the Wildernesses. For example, the Draft EA dismisses noise impacts by saying flights would run Monday through Friday when most human visitors are not there. This logic suggests Wilderness designation only provides part-time protection, and it also sets up the ironic situation where those who visit during the week—oftentimes to avoid crowds or the sights and sounds of other visitors—are going to bear the brunt of impacts from overflights.

Sincerely,  
Becky Wood  
216 Charles St  
Toledo, OH 43609

**Date:** Thursday, February 15, 2024 8:39:03 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Carol Hall  
3547 Estepona Ave  
Doral, FL 33178

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
GAIL PEARLMAN  
PO Box 408  
Oakridge, OR 97463

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Magaly Léger

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

**Date:** Thursday, February 15, 2024 8:37:18 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

There are more realistic places to train such as Russia or Iran.

Sincerely,  
Jon Klingel  
47 Star Vista Rd  
Santa Fe, NM 87505

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

It doesn't take into account the potential damage to wildlife's hearing and would compromise the integrity of the wilderness. The No Action Alternative is preferable to both action Alternatives.

Sincerely,  
Chris Rose

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Studies also show negative impacts to wildlife, including changes in their communication, from anthropogenic noise. Areas of quiet are increasingly diminishing and must be given their right to exist.

Thank you for your consideration.

Sincerely,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

We need the peace, the quiet, the solitude of our wilderness areas. Please rethink this plan and change it..

Dorothy Herrera Settlage

Sincerely,  
Dorothy Herrera Settlage

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Griffyn O'Donnell  
3729 Centinella Dr  
North Highlands, CA 95660

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

**Date:** Thursday, February 15, 2024 8:36:15 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Janice McCann  
1361 Brook st  
Rochester, VT 05767

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Tom France

**Date:** Thursday, February 15, 2024 8:35:22 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Darla Bowman  
19 Cardwell Way  
Louisville, KY 40220

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

The Navy's Draft Environmental Assessment (EA) for the Eastern Washington Airspace Extension proposes to create two new military operations airspaces in addition to other nearby existing military airspaces—the proposed Okanogan D Military Operations (MOA) and the proposed Mazama Air Traffic Control Assigned Airspace (ATCAA).

While the boundaries of these two new proposed airspaces would be the same (the difference in the two airspaces being the vertical height, as the ATCAA would sit atop the MOA), they would significantly overlap both the Pasayten Wilderness and Lake Chelan-Sawtooth Wilderness. The noise from the growler jets would startle wildlife and shatter solitude and silence in both Wildernesses.

Unfortunately, the Draft EA inadequately analyzes impacts to the Wildernesses. For example,

the Draft EA dismisses noise impacts by saying flights would run Monday through Friday when most human visitors are not there. This logic suggests Wilderness designation only provides part-time protection, and it also sets up the ironic situation where those who visit during the week—oftentimes to avoid crowds or the sights and sounds of other visitors—are going to bear the brunt of impacts from overflights.

Similarly, the Draft EA dismisses noise impacts on wildlife because of “short duration and infrequency of exposure.” Yet research shows it’s the sudden and unexpected encounters that have the greatest impact on many wildlife species.

While the jet noise may not be loud enough, or of long enough duration, to cause human hearing loss on the ground, which is what the draft EA analyzed, the jet noise would still shatter solitude and silence—attributes identified by Congress to be protected in designated Wilderness. While we understand the need for Navy pilots to be adequately trained, we shouldn’t have to sacrifice our wilderness heritage to do so.

The No Action Alternative in the draft EA is preferable to both action Alternatives. Alternative 1 (the Preferred Alternative) and Alternative 2 both propose the creation of the airspaces that would overlap the Wildernesses. Alternative 2 would also consider an increase in the capacity of jet fighter training.

Sincerely,  
Michele Roberts

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Stacey Cannon

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

**STOP DESTROYING OUR WILDERNESS AND WILDLIFE!!**

**Date:** Thursday, February 15, 2024 8:33:35 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Kelsey McCathie  
2746 Oakleigh Ln  
Germantown, TN 38138

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Rev. Nanci DeLeo  
65 New Wickham Drive  
Penfield, NY 14526

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Misti Kane  
1112 North Ave.  
Pittsburgh, PA 15209

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Crista Worthy

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Kerry Burkhardt  
5550 Strickler Rd  
Clarence, NY 14031

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Gabriel Rojas

**Date:** Thursday, February 15, 2024 8:29:57 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

As an outdoor enthusiast, I thank you for your kind and thoughtful consideration of my views.

Sincerely,  
Mark Bishop  
2463 Anna Dr. #3  
Santa Clara, CA 95050

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Anthony Flores  
1351 Via Flores Ave

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

**Subject:** [Non-DoD Source] Eastern Washington Airspace Extension Draft EA  
**Date:** Thursday, February 15, 2024 8:28:51 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
JONATHAN HUNT  
4110 BALLARDS MILL RD  
FREE UNION, VA 22940

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Donald Stampfler

**Date:** Thursday, February 15, 2024 6:32:03 AM

---

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:
  - a. Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.
  - b. Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.
  - c. Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!
2. The No Action Alternative is the best choice in this Draft EA.
3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.
4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Matthew Koehler  
1125 Jackson St  
Missoula, MT 59802

**Subject:** [Non-DoD Source] Expansion of the Okanogan D MOA Could Harm Wildlife

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
CRAIG NOBLEY  
400 N 43rd St.  
Seattle, WA 98103

**Subject:** [Non-DoD Source] Expansion of the Okanogan D MOA Needs an EIS Under NEPA

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
McCree Williams

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,

**Subject:** [Non-DoD Source] Increased flights over the Methow Valley

Recently you have likely received messages from citizens of the Methow Valley concerned about expansion of flights over the North Cascades and Pasayten Wilderness. I would like you to know that I disagree with those concerns and fully support the decision of the Navy to train its pilots in mountainous territory given the current state of global tensions and the likelihood of conflict in terrain similar to that of the North Cascades.

I am a permanent resident of the Methow Valley and currently live on my ranch in Mazama. The minor inconvenience the Navy's flights might cause those of us who live in the Methow Valley pales in importance with the Nation's need for a highly trained military.

Karl Ege

Former USN Midshipman, Captain, USMC and Vietnam Veteran

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

We have lived in the Methow Valley for the last 16 years and have been exposed to many disturbing, low, flying navy jets. One of the reasons we moved to this area is for the peace and quiet. More than once we have been out for a walk on a nearby hillside when a Navy jet was so low we could see the face of the pilot. The noise was deafening.

We understand that the Navy needs a place to train their pilots, but the number of flights currently in the Methow Valley is more than we think should be allowed over rural areas where quiet is so important. The navy should easily be able to train their pilots over the ocean, and in simulators to achieve equal experiences for the pilots.

We oppose any increase in training flights over the Methow and surrounding region.

**Subject:** [Non-DoD Source] Comment on MOA Expansion

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Thank you for the opportunity to comment on the Navy's proposed overflight training expansion over the North Cascades wilderness and the upper Methow Valley.

I know too well the Navy's existing horrendously loud Growler jet activity over Whidbey Island and surrounding geography. I lived in Mukilteo for 31 years and explored beautiful Whidbey Island and Camano Island and the surrounding areas during these years and still do. I remember in recent years camping at beautiful Deception State Park. I could not carry on a conversation with my wife due to the jet noise. I will never return there for camping. What a shame.

I live in Mazama. My wife and I are retired, having worked hard for decades, raising a family, being responsible citizens, caring for others, as we wished to be cared for. We operate a nightly vacation rental business, welcoming guests who love the Methow Valley, especially the upper Methow where we live and the surrounding Cascade pristine wilderness. Our guests appreciate the quiet of our environment. The quietness affording the enjoyment of birds' sound is therapeutic. Though I value this pristine environment and live here by choice, I hear jet activity now. Enough. And I really mean it. Enough.

How can you, in good conscience, even consider invading this world class natural environment with its pristine beauty, wildlife, clean air, where people come to recreate and be healed? How can you, in good conscience, consider expanding your flight activity with the loudest, ultra noise polluting, Growler jet in THIS PLACE?

We live here very intentionally seeking peace and quiet. We have paid our dues. Don't spoil it. Don't do it. You do not have to expand your training here. You have alternatives.

If you think I'm self centered, how about my neighbor? He was born and raised in the house he lives in with his dear wife. He has 80+ horses and cattle. He has worked hard all his life. They certainly don't want this negative quality of life and environmental impact.

Please consider my heartfelt plea. Take my words to heart. Don't offend your own conscience. Take your program elsewhere where there won't be such a hellish environmental and human impact on quality of life.

Sincerely, of the highest intent. Patrick Cooper

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

I have spent a decade of my life in the Pasayten wilderness as an instructor for Outward Bound. The solitude, ruggedness, and natural beauty of this place are unparalleled in the lower 48 states. It is a sanctuary for endangered species and one of the last truly wild places left in Washington. The proposed expansion of naval airspace into Mazama and the Pasayten Wilderness threatens to disrupt this delicate balance.

The Okanogan D MOA and Mazama ATCAA expansion would significantly increase noise pollution in an already sensitive environment. This would not only affect human inhabitants but also endanger wildlife that calls this place home. Among these are several endangered species whose survival could be jeopardized by such intrusive activities.

Moreover, this proposal contradicts the very essence of wilderness preservation as outlined under the Wilderness Act of 1964. This act was designed to protect areas where "the earth and its community of life are untrammelled by man," something that will no longer hold true if daily flights by naval jets become a reality here.

It's important to note that this proposed area represents just a small fraction of total naval airspace - so why include it at all? Especially when considering the immense cost it imposes on both humans and animals alike.

We must stand together against such proposals that threaten our natural heritage, our peace, our wildlife, and ultimately ourselves

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

I'm writing to comment on the proposed expansion of training flights (Growler Jets) into the Upper Methow Valley and North Cascades in Washington State.

I am opposed to the expansion of training flights in the Upper Methow Valley and North Cascades.

My reasons for my opposition include:

I am very concerned for the impact on our wilderness, wildlife and the character of our rural valley which also includes a great deal of recreational activity done in the beautiful peace of our wilderness. Examples are nordic skiing and hiking in our beautiful mountains.

Noise is another concern. Flying these loud jets over the Methow Valley is simply incongruous with the peace and nature in the Methow Valley. It would disrupt the beauty and serenity that currently exists in the valley.

In closing, I would request that an Environment Impact Statement be conducted so that this potential action of navy flights can be carefully studied and considered and so that the public can voice its concerns.

I understand the need for an area to conduct training flights however I must state emphatically that the location of the Upper Methow Valley and the North Cascades Mountains is simply not the correct location. This area is too precious to be loudly and aggressively impacted by these proposed Navy flights.

Respectfully,  
Paula L Brekke  
Resident in Mazama, Washingont

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

To whom it may concern,

Thank you for allow me the opportunity to comment on the plan to expand Growler training flights over the Methow Valley and other parts of Okanogan County. I realize that the Navy needs areas to train pilots, however, the Methow Valley already experiences numerous training flights over the valley and surrounding river drainages. I live in the Chewuch River drainage and experience flights directly over my home and property. Many flights are very low and can be startling to us and especially to our young grandchildren. The noise impact (decibel levels) should be addressed in an Environmental Impact Statement (EIS). We are also in the path of deer migration and noise affecting these animals must be included in an EIS. The noise is loud enough to damage the ears of us and especially young children.

The noise from Growlers also affects recreation here in the valleys. We go into the wilderness to get away from people, lights, noise, etc.. The noise from a Growler flying low overhead impacts our experience in the backcountry. The impact to our local economy should also be addressed in an EIS. Tourists come here to "get away from it all" and the sound of a high speed jet overhead was not what our visitors expect. Loss of business here would have a negative effect on our fragile economy. This should also be addressed in an EIS. Some of the fly overs are barely 300 feet above the valley. This information should be available ro view by the public. Transparency please!!

We already have a lot of fly overs here in the Methow Valley and especially directly over my house. I really want to see more research into the impact on our area and way of life. These impacts should be addressed in a comprehensive EIS. Let's see it so we can comment on it!

Thank you for your time and I hope you will consider my comments.

Hello,

As a resident of the Methow Valley for 30 years, I have heard and seen hundreds of navy jets fly through this valley. I understand the need for training for the pilots and the machines, but do wonder why the U.S.Navy needs more territory to fly over.

The impacts of each flight are numerous.

I have seen children cry and run for cover as jets fly low over Perragyn lake or up the Chewuch drainage.

I have friends that have looked pilots in the eye while in their kitchens ( this is not an exaggeration- people that live on the benches of some drainages, can see the pilots clearly).

I do wonder what impact these noisy disruptions have on the wild animals here. I know that the flights are incredibly disturbing to many residents and guest in the valley.

I am unsure why the Navy sees the need for more land to fly over. A lot of what is currently in the flight "plan" includes wilderness and sensitive areas. Isn't that enough air space to practice in?

Are there not other areas that the Navy could train in?

As part of the training regime,are there not simulators that could be used so as to conserve fuel and reduce the noise pollution while achieving the level of expertise the Navy requires?

I'd appreciate a response on why this extension is proposed and who would monitor and regulate the behavior of the pilots.

Thank you,  
Gina Monteverde

To Whom it May Concern,

Unfortunately, I live in a zone that it is legal for the Navy to fly over to train their pilots. I realize they need training areas but I have to say that I have had my grand daughters at my house when we have had a flyover and it was terrifying for them. They would start screaming and crying and there was nothing I could do to calm them. I have called in the pass to express my concerns. I don't think it is appropriate for the jets to fly so low that the dishes in my cupboards rattle and they make my grand kids terrified. I have seen deer scabble for their lives when the jets zoom overhead.

I understand now the Navy wants to expand the area to an even broader range in the Methow Valley. I guess there is nothing I can do about the existing area of fly zones, so I'm speaking out for those who may have to endure the disturbances in their neighborhoods. Please at least require there be an EIS of the proposal. The noise effects should be included in the EIS. I can't tell you how loud these jets are over our house. Maybe it sounds even louder where we live because we are close to cliffs and the sound echoes off of them. I will say, it is terrifying and I try to cover my grandkids' ears when they are roaring by. I can't imagine the impact of the noise on other wildlife like birds.

How much fuel do each of these jets use? What emissions are emitted during each flight? How low do these planes actually go? Does the Navy have adequate flight data that shows the actual altitudes and noise levels? I would like this to be available.

Please consider my comments when considering to expand the Navy overflights.

Thank you,  
Deirdre Cassidy

**Subject:** [Non-DoD Source] Comment Opposed: Proposed Okanogan D MOA which lies west of the existing Okanogan A & B MOA

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear USA Navy, Senator Patty Murray, Senator Maria Cantrell and Rep. Rick Larsen (copied directly to them),

Thank you for the opportunity to comment about the proposed increase in training airspace over Winthrop, Twisp and the Okanogan Valley.

The reason for this increased training airspace request, is because of the increased number of EA-18 Growler Jets based at Whidbey Island Naval air station. The increased number of jets was rammed through without proper vetting by the Navy. I have personally suffered the increased noise in my home.

The existing jet noise overflying our home on Camano Island is frequent and deafening with the current level of training flights. Frequently over 90 dB's inside my home. I have interrupted sleep, the inability to continue conversations outdoors when the jets are flying, and the knowledge that we do not understand the impact of this noise us or on our children who are growing up with this noise. These jets are the loudest jets on our planet. The Navy is currently flying these jets without a completed environmental impact statement which a federal district court judge has ordered the navy to complete, but which the Navy is currently stonewalling and out of compliance on. The Navy has done this to our community for YEARS.

I respectfully request that the Navy conduct an Environmental Impact Statement (EIS). According to the National Environmental Protection Act, an EIS must be prepared when a major federal action is proposed. The Navy has not provided the public with an adequate analysis of significant environmental effects on the state of Washington and the rare species of birds, animals and whales that share this incredibly fragile ecosystem. Cummulative impacts should be analyzed in an EIS. Continuing to promote flying within 300 feet above the valley floor will continue to terrorize wildlife as well as livestock. People out hiking continue to be randomly assaulted by Growlers flying too low in our National Parks.

It is incumbent on the Navy to develop information on the real potential effects of noise on people and wildlife. The analysis should address in greater depth, the noise impacts on our diverse bird species and migration of bird species (Tundra Swan and Snow Geese). Of special note are potential implications of this proposal on areas where grizzly bears may be introduced in the near future.

I would also ask for a detailed analysis of fuel emission impacts from Growler activity. We deserve a clear understanding of the consequences of this proposal from an emissions standpoint.

I also request an analysis of the jet noise impacts in transit from Whidbey Island to conduct operations in North Central Washington. The Environmental Analysis (EA) includes no useful information on the transit routes (outbound and inbound). These routes pass over tens of thousands of people and thousands of acres of wilderness, with the same kinds of impact highlighted above. This is a significant omission that should be addressed.

As indicated in the EA, very significant Navy operations are already being conducted in this region of North Central Washington. To fully comprehend the cumulative effect of all of these operations (including the newly proposed Okanogan D MOA and Mazam ATCAA), the public deserves to see actual flight data which documents altitudes and noise levels on a continuous basis. We request that the Navy commit to installation of flight recording devices to provide this information. Such information will go a long way toward building understanding and enabling an accurate assessment of both short and long term impacts.

We learn from history, that if we do not protect nature it will disappear. We need to be proactive in Washington State to protect our wilderness. Once it's gone, it's gone.

Sincerely,  
Rebecca Karschney  
173 Blue Mountain Road  
Camano Island WA. 98282

Public comment for Navy jets, new military training air space extension proposal/

- I did join the Feb 13 Navy Zoom as a public listener. There were many generalities. The altitude level for ingress and egress to the Methow Valley, Okanogan area was generalized and rather vague. The issue of increased flights in our area being due to Navy base location on westside Washington and "efficiency" reasons for just one base location seemed to focus on a short term rather than long term view. The long term view and long term thinking would seem to include the need to spread out military air space training to other locations.

- While it is definitely recognized that the Navy needs training experiences, other considerations must be included in decisions.

- There is already a concern for the amount and level of Navy jet noise and intrusion over the Methow Valley, as known on the record in past years from past public comments.

- Besides the "regular" airspace intrusions, I myself still remember an incident now 15 years or so ago, when I was working outdoors on a hillside in the upper Methow Valley and a Navy jet ripped over the ridgeline only 50 ft or so above ground level! Yes, the low height was unbelievable! and plugging my ears I made an approximation at the time - 50 ft!

- Noise assessment in the Draft EA uses "average" or "median" measurements and is inadequate. The assessment of the reality of noise impacts to people, residents, outdoor recreation, economy, as well as the very significant startle impacts and stress to wildlife was completely inadequate.

- The EA simply states the noise impacts would "cause minimal disturbance to land based recreation and tourism activities" p.3-53, and in other parts of the EA the wildlife impacts are basically dispensed with as no problem in a sentence or two, even when threatened and endangered species are a significant part of the wildlife of the area of proposed impact.

- A Methow Valley neighbor told me that there is a Table in the EA that includes the Preferred Alternative would allow 100! jet flights at night!, and "nighttime" doesn't begin until 10pm!

- Monitoring attention, responsibility, and protocol were completely inadequate, in the EA and the Feb 13 Navy Zoom as well. Unacceptable.

- - Significant concerns for the training extension proposal include the impacts to Wilderness, other high quality outdoor spaces, wildlife, rural lifestyle and economy, as well as the lack of monitoring. For these reasons the proposed westward extension of the Okanogan and Methow Valley military training space is a wrong project in the wrong place in the wrong time, and shouldn't happen. If the Navy has further interest in pursuing this proposal, an EIS is necessary.

- Thank you for the opportunity to make public comment on an important public impact issue.

Susan Crampton  
Twisp, WA

US Navy, Navy Facilities Engineering Systems  
Command Northwest

We are opposed to expanding military training exercises to the Methow Valley, Okanogan County, and believe an Environmental Impact Statement should be completed before a decision is made. There are many, many issues of concern, including the noise of these operations on citizens (particularly children, the sick, and elderly), wildlife, domestic animals, the quality of life in general; the negative effects on recreation and the economy; and the negative effects of fuel emissions on air quality and climate warming.

Please consider alternative locations and gather sufficient data so that this decision is based on scientific evidence that is readily available to the community. People in this area and other communities affected by similar flight operations do not deserve to have their lives turned upside down by noise from some of the Navy's loudest planes. We appreciate the Navy's work, but it should not damage the lives of local communities.

Thank you for considering our comments.

Diane and Greg Stone  
Island County

**Subject:** [Non-DoD Source] Proposed Expansion of Growler Acitivity over the Methow Valley

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

I am writing to demand "No Action" from the Navy on this proposal.

As an avid hike in the Methow Valley and on the Pacific Crest Trail I believe the loud intrusion of the Growler aircraft would seriously impact the wilderness areas as well as other recreational areas in the Methow. People go to the Methow to seek peace and quiet. There is enough Growler noise already impacting trails and wilderness areas on the west side of our mountains.

To my knowledge a Navy EA requires NO accountability to the communities and ecosystems impacted by this extension. I believe a judge has ordered the Navy to complete a comprehensive EIS to assess such things as greenhouse gas emissions, impact on wildlife and birds, as well as the impact on people.

NO ACTION should be taken on this expansion proposal until the Navy has completed a comprehensive EIS under the guidelines of the National Environmental Policy Act and alternate locations such as El Centro, California are considered and explored.

Thank you for your consideration in this matter.

Paula Shafransky

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Military jets are harmful to all wildlife. Currently all wildlife is threatened by habitat damage, reduced range of wilderness and climate change. All wildlife is sensitive to these disturbances which affects their reproductive and general well being.

I live in Washington state because of the progressive conservation measures and am baffled how this plan has progressed so far.

Thank you.

Sincerely,  
Portia Masterson

## **Comment on Expansion of Navy Overflights Environmental Assessment**

I am Dr. Lewis Queirolo, Ph.D. I reside on Camano Island, Washington. I am a United States Military Veteran (1966 - 1970), with more than 43 years of Federal Service. From 1980 until 2017, I served as Senior Regional Economist, DOC/NOAA/NMFS Alaska Region.

In that capacity, I personally designed, conducted, reviewed, and, on behalf of the NOAA Regional Administrator, approved literally hundreds of Regulatory Impact Analyses, Environmental Assessments (EA), and Environmental Impact Statements (EIS). In significant part, that required assuring and confirming full compliance with NEPA mandates, best practices, and policies in document preparation.

During roughly the final decade of my Federal career, I was a member of the North Pacific Fishery Management Council's (NPFMC) Scientific and Statistical Committee, charged with technical review and approval of all EA's and EIS's that came before the NPFMC.

I also served as a member of the EXXON-Valdez Oil Spill Damage Assessment Task Force, preparing and reviewing the Environmental Impact Statement, on behalf of the Federal Trustee Agencies. I subsequently served on the NOAA Task Force preparing the EIS in support of the Oil Pollution Act of 1990 (33 U.S.C. §2701 et seq. (1990)).

**I appreciate the opportunity to comment on the Draft EA pertaining to MOA Expansion of Navy Overflights.**

Under NEPA, an EA is intended to initially assess whether or not a proposed Federal action has the potential to cause significant environmental effects. In doing so, an EA must comprehensively and exhaustively examine all potential adverse impacts that may reasonably be expected to accompany each of the proposed alternatives to the No Action option. The critical element in this NEPA mandate resides in the term "**comprehensive**".

An EA must identify, fully describe, and, to the fullest extent practicable, quantify all impacts of the proposed alternative actions. But while necessary, this is not "sufficient" to fulfill the NEPA obligation. The Agency preparing the EA is further required to **qualitatively** identify, characterize, and evaluate all potentially attributable impacts, even when quantification is not practicable.

It is not apparent that this Draft EA has addressed this NEPA mandate. Absent completion of this NEPA requirement, the Draft EA is **deficient**.

At present, the Navy is, at the direction of the Federal Court, revising their EIS pertaining to the adverse impacts of the proposed EA-18G Growler Training Program Expansion at NAS Whidbey. The Navy's initial EIS was found "deficient" on numerous technical, factual, and procedural grounds. It either failed to directly collect critical adverse impact data or it selectively applied (if not completely ignored) pertinent existing data and impact analyses.

Subsequent to the Federal Court's finding in the above cited EIS matter, the Record of Decision has been supplemented with substantial data and analyses bearing on the adverse impacts of Growler noise on: human health, wildlife and wildlands, recreation and tourism, commercial and land use values, community economic valuation, socioeconomic stability, child education and emotional development, and intangible human welfare (e.g., Post-traumatic Stress Disorder). The Navy is in possession of, has access to, or is conducting research and data collection on all these aspects of Growler training activity within the present NAS Whidbey MOA. And yet, the subject Draft EA fails to acknowledge, cite to, or utilize these data and research results. Instead the Draft EA summarily concludes "No Significant Impact" attributable to any of the alternatives. This is a fundamental **deficiency** of the subject Draft EA.

The Draft EA states "*While the NWTRC EIS/OEIS and Record of Decision (ROD) also analyzed the Chinook and Olympic MOAs in Washington State, no changes are proposed in those areas as part of the Proposed Action, and analysis of those areas are not included in this EA.*" This constitutes a significant **error** in design and scope of the subject Draft EA. NEPA mandates a **cohesive** and **comprehensive** analysis of the entire relevant potentially impacted environment, within which any proposed action is contemplated. Conjoint, concurrent, affiliated, and reasonably associated adjacent and contemporary actions must be accounted for within a NEPA compliant impact analysis. The Federal Court-ordered revision of the NAS Whidbey EIS assuredly triggers this requirement within the subject Draft EA. Its omission is a serious **deficiency**.

It is reasonable to ask, where is the analysis of the extensive data and research contained in the Federal Court-ordered EIS revisions to the Record of Decision, as pertaining to the Draft EA proposed action? Absent consideration of these data and research findings, the Draft EA has no basis upon which to assert "No Significant Impact". Any such "No Significant Impact" finding, asserted prior to thorough review and analysis of all available data, **fails**, on its face, to meet mandated NEPA requirements.

The public has the right to know specifically how these relevant data, research results, and preliminary findings from the revisions to the EIS have been considered within the subject Draft EA. It appears that even the most cursory review of the material being developed in preparation of the Navy's Court-ordered revised NAS Whidbey EIS, would call into doubt the "No Significant Impact" conclusions presented in this Growler MOA Expansion Draft EA.

Again, citing NEPA requirements and Environmental Protection Agency policy and best practice, a draft EA **cannot be evaluated in a vacuum**, but must incorporate all relevant information, data, and research available within the full scope of the potential impact context. The Growler MOA Expansion EA cannot be regarded as **comprehensive**, absent full treatment of the entire NAS Whidbey's Growler Training

Program, within which the MOA expansion is but one part. Failure to comprehensively acknowledge and incorporate the entirety of the 'Growler Program' impacts, fails, once again, the mandated requirements and clear purpose and intent of the National Environmental Policy Act.

One must conclude that the subject Draft EA fails to fully account for the additional adverse impacts of the MOA expansion within the **comprehensive** scope of NAS Whidbey's EA-18G Management and Operational Program.

Consider just one example of why NEPA does not allow piecemeal and fragmented analyses. It is indisputable that, should the Federal Court-ordered revised NAS EIS select as its preferred alternative relocation of the EA-18G training program to the proposed California facility (as one action alternative under consideration in the NAS revised EIS does), the need for and environmental impacts of the subject Draft EA would become moot. Therefore, in the absence of a full analysis, within the subject Draft EA, of the potential concurrent impacts that may emerge from the final decision in the revised EIS, the Draft EA is **deficient**. That is, the Draft EA's "Purpose and Need" statement may become superfluous, depending on the yet to be decided revised EIS preferred alternative.

This is precisely why NEPA disallows consideration of proposed actions in a vacuum. NEPA recognizes that, absent a full and coherent treatment of proposed actions which can reasonably be expected to have conjoint and/or concurrent impacts, the public interest is not served. Where are these impacts expressly addressed in the subject Draft EA? As previously observed, the proposed MOA expansion will not occur in isolation from the balance of the NAS Growler program.

Why has the Draft EA failed to address potential adverse impacts specific to hazardous materials? Within the context of the Federal Court-ordered revision of the Navy's NAS Whidbey's Growler EIS, considerable concern has been raised about the hazardous impacts of aviation jet fuel dumped from Growlers, as well as exhaust toxins emitted during training flights. Those EIS data, pertaining directly to the potential adverse impacts on human health, environmental quality, and hazardous material discharges potentially attributable to the MOA Expansion proposal have not been assessed. Where does this necessary analysis reside within the Draft EA?

The subject Draft EA is further **deficient** under NEPA mandates insofar as it neglects the direct and indirect adverse impacts on commercial and private property values, potentially attributable to an expanded Growler MOA. Significant economic analysis and data, associated with the Federal Court-ordered NAS Whidbey's EIS revision, demonstrate potential adverse impacts, attributable to Growler jet noise, on property values and land-use (private, public, and commercial), habitability, as well as direct and indirect **economic** damages. The Navy and residents of Whidbey Island are currently involved in litigation over precisely this issue. Equivalent adverse **economic** impacts potentially accrue from the proposed MOA expansion and must be addressed under NEPA mandates within the Draft EA.

This raises the question, why did the preparers of the Draft EA specifically choose not to address potential direct and indirect adverse **economic welfare** impacts? Substantial research exists directly pertaining to EA-18G Growler Noise Impacts on National Parks and Wilderness use and enjoyment (e.g., Olympic National Forest and National Wilderness Preserve; Deception Pass State Park and Campgrounds; Ebey's Landing National Historical Reserve). Despite this pertinent information, no analysis of comparable potential adverse impacts from Growler noise within the expanded MOA has been presented.

While perhaps difficult to quantify, measurement of economic welfare impacts are nonetheless required under NEPA. They must be described and qualitatively estimated, to the fullest extent practicable. This appears to be a significant **deficiency** in the Draft EA.

There exist substantial data available on the impact of Growler noise on residential property values and habitability (e.g., real estate valuations, private property sales and occupancy changes) within the NAS Whidbey Growler MOA. The potential for equivalent adverse **economic** impacts within the expanded MOA must be objectively analyzed. Absent this mandated impact analysis, an EA cannot be found to be in compliance with NEPA. Where does this required analysis appear in the Draft EA?

Why has the Draft EA asserted that a noise level exposure that may approach 110dB is not a significant adverse impact? Several published sources report that 90dB to 95dB represent noise levels at which sustained exposure may result in substantial hearing loss and even intermittent exposure, well below the cited **108.7dB maximum**, imposes adverse physical and psychological harm. People utilizing remote recreational landscapes do so, at least in part, for solitude. Exposure to Growler jet noise adversely impacts the welfare value of such use and cannot be dismissed as imposing no significant impact. On this specific matter, the Draft EA seems to suggest noise levels exceeding 90dB are unimportant, because they are fleeting and rare. However, no evidence is offered to support a conclusion that projected Growler sorties within the proposed expanded MOA are either rare or fleeting.

The Draft EA reports the increased EA-18G sorties would number between **4,300** and **4,800** under the two PAAs. Growlers operate in "multiple aircraft" configuration and overfly any given area in a concentrated pattern. The Draft EA projects a very significant increase in Growler sorties over the expanded MOAs, calling into doubt the assertion that intense exposure to potentially injurious decibel levels will be infrequent and of only momentary concern. Inclusion of noise impact analyses associated with value loss to wilderness users in, for example, the Olympic National Park and Wilderness should be referenced and directly incorporated into the subject Draft EA noise impact analysis. These adverse impacts have not been found to be insignificant in the Federal Court-ordered revised NAS Whidbey EIS. Failure to expressly analyze these highly relevant data would presumably result in the Draft EA being found **deficient** under NEPA requirements.

The inclusion of the modeled EA-6B sorties for the baseline calculation contributes nothing to the EA-18G **noise** impact analysis, which is the relevant issue at hand. Within the baseline model, purportedly employed to assess attributable incremental change for the PPAs, fully **3,851** of the baseline total **4,362** sorties (i.e., 88.3%) are assumed to be EA-6B overflights. As the Draft EA notes, the EA-18G is the **loudest** aircraft in the Navy's arsenal, while the EA-6B aircraft noise profile is vastly lower and less intrusive. Implying, as the Draft EA seems to, that there is any meaningful equivalency in the potential baseline impacts when EA-18G overflights are substituted for EA-6B sorties is disingenuous and inappropriate. The impact of an EA-6B overflight and that of an overflight of an EA-18G are in no way **equivalent** and should not be suggested as such by use of the simple **numeric** change in sortie frequency.

The use of this rudimentary **numerical** comparison is equivalent to asserting, for example, that removal of 500,000 Chinook salmon from the Puget Sound would be expected to have the same impact on the Southern Resident Orca population, as removing 500,000 pink salmon from the same area. FYI, these are strictly **non-comparable** changes. The Endangered Species Act listed Southern Resident Orca population relies critically on Chinook salmon as their primary food source, while pink salmon are not part

of their diet. Therefore, to even indirectly imply some **numeric equivalency** of attributable impacts of Chinook salmon and pink salmon removals ... or EA-6B and EA-18G sorties ... is unwarranted.

Where does the subject Draft EA explicitly address the adverse impacts of each PPA to No Action that cannot be readily quantified? These qualitative adverse impacts do not appear to be identified, characterized, and evaluated, as required under NEPA (e.g., psychological health and welfare impacts on residents of the proposed MOA expansion). Qualitative adverse impacts have the potential to significantly impact members of the public who reside in, visit, recreate, or otherwise utilize the areas identified in the Draft EA MOA expansion. And yet, a careful reading of the Draft EA fails to reveal any adequate treatment of these potential damages, strongly implying another **deficiency** under NEPA rules.

Based upon my professional experience designing, preparing and overseeing preparation, reviewing, and approving NEPA documents on behalf of several U.S. Federal Agencies, Councils, and Commissions the subject Draft EA appears to be **substantially out of compliance** with NEPA standards, best practices, and requirements. The EA fails to rigorously examine and apply relevant data and research, and asserts "No Significant Impact" based upon seriously deficient supporting evidence, if any at all.

Thank you for the opportunity to review and comment on this Draft EA and its adequacy under the National Environmental Policy Act.

---

To Whom It May Concern:

I am writing in regards to the expansion of the training area for for the EA-18G growler jets into the upper Methow Valley, the North Cascades and the Pasyten wilderness area. As a veteran, I appreciate the need for training areas for military preparedness. I thank you for the opportunity to comment on the expansion.

I am opposed to this expansion for the following reasons:

- 1) Methow Valley and the North Cascades already experience significant impacts from military operations. The proposed areas is not the place to expand training flights.
- 2) The proposed expansion would affect the diversity of wildlife, especially endangered species such as the wolverine ;and Canadian Lynx.
- 3) Those of us who live in the upper valley full time greatly value the quiet and peaceful beauty that surrounds us. The noise generated by the extremely loud military jets destroy this serenity.
- 4) The noise generated by these jets would impact our sleep as we go to bed before 10:00pm. Even our afternoon naps would be disturbed. The pleasure we take from hiking, skiing and running would all be diminished by the noise of these jets.
- 5) There will be economic impacts resulting in this expansion. The valley is dependent on tourism, Last year, we cancelled a trip Whidbey Island when friends told of the jets flying overhead.Last year, we were looking at a house near Winthrop when a growler flew overhead. The sound was so loud that we couldn't continue our conversations — and the noise lasted for what seemed like five minutes. If we came to the valley to look for a new home, we certainly wouldn't want to buy a house under that flight path.

I request that the Navy complete a thorough and careful Environmental Impact Statement. The potential damage needs to be assessed before it is too late. The impact of these growler flights in our peaceful area will be devastating to our way of life and harmful to all the wild animals who live here.

Thank you for considering my opposition to the expansion of EA-18G growler flights in the upper Methow Valley and the North Cascades area.

Sincerely,

Ken Young

Hello -

I am writing about the proposed Growler Training Expansion in the Methow Valley.

I have lived on Whidbey Island for 22 years and lived in Okanogan County for 10.

I listened to a good Zoom meeting where Navey personnel answered questions from the public.

Our lives here on Whidbey have been disrupted, scores of people in the flight path have had to move.

Our quality of life and suitability as a tourist destination have suffered. This affects the Island wide economy.

A questioner asked why the expansion should be approved when the current lawsuit has not been settled (in Island County). The answer was they are not connected. I don't agree.

I suggest you adequately consider an alternative, less populated training site in California before expanding into Okanogan County.

Sincerely yours -

Katherine Moulton  
Whidbey Island, Wa.

Attn.: Katherine Jesser, Environmental Planner

Thank you for the opportunity to comment on the Navy's expansion of Growler airspace to Okanogan County. While I acknowledge that Navy pilots need to train, flying over communities and public lands is not where they should do it.

The negative effects of Growler noise levels are numerous and intolerable, adversely impacting the quality of life of individuals and communities. Growler noise also ruins the pleasure of recreation, and harms wildlife, from small birds to large mammals.

The Navy should calculate noise levels realistically by measuring instantaneous noise levels, not by averaging the deafening sound of flyovers with quiet times when there are none.

Growlers significantly contribute to global warming by polluting the sky with their fuel emissions. The Navy's reckless disregard of this fact is appalling.

A few years ago I was chatting with a woman from the Methow Valley, when we were interrupted by Growlers flying directly over us. We had to stop talking and plug our ears. When the sky was quiet again, she told me that Growlers sometimes flew over her ranch. Her horses reared up whinnying and tried to run away, crashing into the fences.

Now that the Navy wants to increase their training exercises east of the Cascades, the image of those horses comes back to me, and I know the people there will experience the same traumas that we who live closer to the naval air station experience.

The military owns millions of unused acres in this country. The Navy should fly their jets over military reserves, and not foist their ear-splitting noise on civilians, wherever they might live. If the Navy expands the range of their operations in Washington, what is already an abomination will get worse.

Sent to [navfac-nw-NEPA@us.navy.mil](mailto:navfac-nw-NEPA@us.navy.mil) on February 21, 2024.

I'm Dr. Roselie Bright, a Maryland resident. I have a doctor of science degree in epidemiology, which is the science of diseases in populations, with an emphasis in environmental health. I'm retired from a federal career as an epidemiologist.

My focus is on the public health impacts of various federal projects. Thank you for this opportunity to contribute my professional opinions. I look forward to the publication of this and other public comments.

## **I. CONSIDERATIONS**

### **A. Sections that Need to be in Environmental Impact Statements**

Lately, I've been reading draft and final environmental impact statements (EISs) for a variety of federal projects. They have included some elements of public health impacts. However, none of them have included all public health and wildlife impacts related to noise.

### **B. Documented Effects of Noise on Human Health**

The draft EIS claims there will be no significant impacts on public health and safety by the proposal. However, noise pollution, partly caused by combustion engines, has been found to have significant adverse human health impacts [1-5], including hearing impairment [6], poor sleep quality [7-8], morning fatigue [9], obesity [10-12], diabetes [13-14], childhood cognitive development [15], mental ill health [16-19], increased blood pressure [20-25], childhood increased blood pressure [26], heart disease [27-32], cardiovascular risk and events [33-34], lung disease [35-36], raised stress hormones [37], brain damage [38-39], cancer [40], and death [41-42].

The draft EIS claims that most of the noise will be imposed during workdays, when there will be less human recreational use. I contend that creating noise during workdays instead of weekends will force recreational users to choose between solitude with irritating aircraft noise versus being in a situation with less aircraft noise but more human crowding and human noise. This will eliminate the use of the area by people who go into wilderness areas seeking quiet serenity in nature for recreation and its mental health benefits [43-50].

### **C. Effects of Noise on Wildlife**

The draft EIS claims there will be no significant impacts on wildlife health and ecology by the proposal. However, it stands to reason that if noise impacts human health, it also adversely impacts wildlife. Indeed, several scientific reviews alert us to the body of scientific work on the topic [51-53].

#### **D. Comprehensiveness**

My above summaries are not comprehensive.

## **II. RECOMMENDATIONS**

### **A. Experts to Work on Environmental Impact Statements**

Please note that there are plenty of published scientific articles that address noise of which your authors were apparently unaware. A scientist with a doctoral degree in epidemiology, with expertise in environmental health, is the most qualified to find and analyze the extensive literature on human health. You could also benefit from a biologist with a doctoral degree with a specialty in wildlife development and health. If you don't have such people on your staff, you could try to obtain several on detail from another agency, or contract with academics.

In general, your EISs should state the personnel who contributed to the different sections, and their qualifications. A place for this was listed in the Table of Contents but those pages were not provided in the public draft EIS.

### **B. Health Impacts Assessment**

The final EIS needs to include an objective comprehensive review of the impacts of noise on the health of humans and wildlife in the areas to be affected by the proposal. Any consequences of the health impacts also need to be comprehensively assessed and included in the final EIS.

### **C. Boundaries of MOAs and ATCAAs**

The boundaries should be redrawn to eliminate overlap with designated wilderness areas.

**Subject:** [Non-DoD Source] Comment on proposed flight training expansion in the Methow Valley

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Hello,

I am not in favor of the Navy's proposed plan to expand training flights in the Methow Valley.

Mazama borders the Paysaten Wilderness, the scenic North Cascade highway corridor, and the North Cascades National Park. The additional noise from flights over this area would be very disruptive to people, animals, birds... in short anyone who inhabits these areas, including people like myself who live here.

I understand that noise assessments have been made however I do not believe the specified altitude limits will always be adhered to by the planes. I personally have been flown over by very low altitude (500- 1000 feet) Navy jets on several different occasions in the Chewuck river valley - the noise is deafening and shocking when it happens. Any evaluation of proposed flight impacts on the environment should include the effects of low altitude flights because that is what actually occurs. Because of these concerns I think a full Environmental Impact Statement with study would be the appropriate tool to evaluate the effects of this noise on the ecosystem.

I know there is a need for pilot training, however this sort of activity is simply not compatible with the Mazama corridor and adjacent wilderness areas. Thank you for soliciting comments.

Sincerely,  
Steve Quarre  
15 Lost River Airport Runway

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

The Navy is not above the law. It must complete an EIS before any expansion of Growler flights. It already far exceeds environmental norms with the number of jets & the level of noise. The operation has also contaminated our aquifers & continues to use forever PFAS chemicals. No Action!

To the US Navy and Military;

I am writing to you to express my anxiety over your polluting of the environment in order to keep me safe. I often wonder if you think killing the earth slowly is preferable to what you are keeping me safe from. I do not think that the price I'm paying in breathing your fuel, eating your flame retardants in my food and ruining the shell fish, and other marine life has to be in the equation of national security.

I believe Russia and China win in the end when we slowly diminish our quality of life to all we have is plastic and chemicals is in our water and land, with lots of cancer.

Humans are resourceful, especially when we have the facts, yet you continue to hide them from us thinking we would prefer cancer to what? Putin, China, they are just as transparent as the US military.

You need to be smarter, protect not destroy your homelands. Incorporate the intelligence that the United States still has in the freedom to think for ourselves.

If your going to take your own people down slowly in your covert behavior, know you're doing it, and that we don't want it.

Sincerely, start becoming who you would like us to think your are, and do the right thing and stop polluting in our best interest and when you do, clean it up.

Lori McKole

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

A comprehensive EIS must be researched compliant with the National Environmental Policy Act (NEPA) and alternate locations considered. Growler training disturbs wildlife and communities and emits enormous amounts of greenhouse gases. The US already has more than enough defensive power with the Dept of Defense's bloated \$800 billion+ budget. No more Growlers!

Sincerely,  
Gregory Denton

**Subject:** [Non-DoD Source] NAS flights over Methow Valley

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

I was saddened to learn that NAS Whidbey Island is considering expanding their Growler jet training flights over the Methow Valley & east slopes of the North Cascades National Park. Including the Pasayten & Sawtooth Wilderness. I know too well the impact of noise levels from the flights.. We live on Central Whidbey, & while the noise is not nearly as extreme as that north of us, it is still disruptive to our quiet island lifestyle. On occasion when the flights veer a little further to the south than usual – and they do- there is a perceptible change in our horse’s behavior. I find the almost continuous dull drone to be fatiguing and stressful.

Multiple the noise level many, many times that of our location to a low level flight over the North Cascades or into the Methow, & I would be very concerned about impact to humans & animals alike. I am a big proponent of reintroducing Grizzlies & supporting the return of the wolf to the North Cascades Natl. park. I believe the noise impact could prevent the animals from thriving.

We love the Methow. I believe that the tourism Winthrop & the Methow Valley relies on would be negatively influenced. People who are drawn to the area as a respite from city noise to camp, hike, stay in Winthrop etc. are not likely to return after they’ve experienced the noise disruption. We have experienced the noise level at Deception Pass campground, & hesitate to return.

Equally concerning is the environmental impact of pollution from the planes.

Thanks for considering my point of view.

Connie Lloyd

I have lived and worked in the Methow Valley and it is well known for its beauty and nature. Hiking, skiing and horseback riding are a huge part of the culture there. Flying loud jets over the gorgeous Methow Valley is completely unnecessary. The noise will negatively impact tourism, cattle, horses, wildlife and the gorgeous North Cascades National Park.

Living on Whidbey Island I understand the impact of Navy jet flights here. To burden the Methow Valley with this amount of noise is unconscionable.

**Subject:** [Non-DoD Source] Our view from the Chewuch

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

We certainly appreciate the Navy's need to train pilots in rugged terrain. We are confident that more careful consideration of the impacts of the preferred proposal will allow the value of other areas worthy of consideration for training. We question the addition of Okanogan D/Mazama and the considerable increase of flights to Roosevelt/Colville airspace.

As residents of the Chewuch Valley in Winthrop, we are often startled by current training flight paths that rattle windows and nerves during low-level flight. We are curious about the impact on "biological resources", especially seeing our neighbor's herd of pregnant cows waiting to drop calves in still snowy fields. As long time backcountry recreationists, we have 4 decades of experience of the sudden and considerable noise impact of flights in the current flight paths over the Pasayten Wilderness and North Cascades National Park. We were reminded of this just today, when the noise impact of Growler flight training was evident while skiing at LoupLoup Pass. Our regional economy is steadily more reliant on recreation opportunities and tourism, and deserve a more thorough EA/EIS of the impact of flight training over the region.

After attending the Navy's Feb 13th online presentation and reading of the [Draft EA](#), my wife and I would like to raise substantive concerns about the airspace extension into the Mazama ATACCA and to the need for a proper EIS to more carefully document the environmental impacts on the existing Okanogan and Roosevelt MOAs.

**Table ES-1: Summary of Potential Impacts on Resource Areas Pending Analysis** on page iv of the Executive Summary appears to lack analytical rigor with the broad brush of "No Significant Impacts" shown for all fields seeming to indicate the impact on Navy Operations more than on consideration of specific actual impacts on air quality, biological resources, child and adult health and safety.

Low level flight data as shown on **Table 3.2-3: Maximum Noise Level for the EA-18G for Different Distances from a Receptor and in Appendix Table 4-9** does not show data for elevations below 2000', where there is a dramatically sharp increase in noise impact for sections of flight training closest to the ground. While the noise impact of low level flights represents a small percentage of the total flight time, its impact is considerable and should be evaluated with EIS or further EA review before any action is taken to increase training flights.

Again, we urge the Navy to more thoroughly anticipate the ground impacts of the proposed Eastern Washington Airspace Extension Environmental Assessment and urge a full E.I.S. be completed before proceeding. We also urge consideration of other potential flight areas to ensure adequate training opportunities for the Navy pilots. Inasmuch as the final responsibility lies with the federal government, we have sent a copy of our remarks to our elected representatives in Washington DC.

Respectfully submitted,

Craig Seasholes and Polly Fabian, MD.

Please take “no action” on the expansion proposal until a comprehensive Environmental Impact Statement (EIS) is completed under the guidelines of the National Environmental Policy Act (NEPA) and alternate locations are considered.

The impact of Growlers is considerable. It affects humans, animals, and habitat. We need to consider the impact on all of us. I know people who live close to Growlers operation in Coupeville area who cannot hold normal conversations until the 90 seconds have passed before the next Growler takes off or lands. They have been known to fly over the area until late at night - beyond 11:30 pm. Humans with PTSD cannot take it. Stop. Think. Don't do this.

Sincerely,

Patty Cheek

To Whom It May Concern,

I am deeply troubled by the idea of the jets flying over the Methow Valley. It is one of the last places with real quiet and wilderness that needs to be protected. The jets are harmful to humans and wildlife and fracture the peace of a place I go to for rest, quiet and renewal.

You will damage their tourist economy, their environment and their health. This is a travesty. I can't believe that one of the most beautiful places in Washington will no longer be a place of inspiration and renewal.

**Subject:** [Non-DoD Source] comments on proposal to extend Growler airspace

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

I am writing to urge the Navy NOT to expand the Growler's airspace to impact the Methow Valley in eastern Washington state without additional research and review. Until a comprehensive EIS is completed under the guidelines of NEPA and the National Historic Preservation Act (NHPA), the Navy is not considering examining alternate locations that would be better suited for the training the Navy requires. The Navy is a federal agency that must comply with federal requirements and laws that serve to protect natural and cultural resources located in areas the Navy is proposing to impact, with possibly adverse impacts to those areas and special resources, not to mention communities with year-round residents. The Navy has skirted or ignored federal laws and regulations and processes in the past and must STOP DOING THAT.

NO ACTION should be taken on this expansion proposal until this EIS is completed.

Thank you for considering these comments as part of the official record.

re: Eastern Washington Airspace Extension

I live in Skagit County, on southern Fidalgo Island, across the bridge from Whidbey Island and Ault Field, and appreciate the opportunity to comment on this issue. This proposed action is an understandable request from the Navy. The Growler fleet needs a lot of designated airspace in order to achieve the goal of well-trained Growler pilots and crew.

But this proposal is a bad idea. Growlers do not belong over communities, urban or rural, or over the public lands of those communities. They belong over military reserves.

Growler jet noise is overwhelming - audibly, mentally, and physically. Since the Growlers' arrival in Ault Field in Oak Harbor, thousands of people in innumerable public hearings and forums have said so, again and again, in print and in person.

Still, the Navy claims that Growler jet noise is not significant, that it does not pose a threat or cause any damage. Their justification is an abstract, statistical model (from the American National Standards Institute-Acoustical Society of America) that averages noise levels over a full day and night, blending times of silence with times of jets overhead. The resulting "non-significance" of Growler jet noise is a statistical fabrication designed to provide the answer the Navy wants, not to show the reality. Anyone who has heard Growlers overhead knows this is a false premise manufactured to serve the Navy's argument.

In the statistical model, if you average the jet noise of 50 overflights, each about 30-60 seconds long and reaching levels of 100-120 decibels over the course of a 24-hour day, the impact of the jet noise is statistically averaged out by the 23-plus hours of the status quo, the relative peace and quiet of communities when Growlers are not flying. Poof, like magic, the impact of a 120 decibel overflight disappears into normal sound levels.

But that's only on paper. To any individual, the impact of those relatively short flights overhead is NOT absorbed by the relative quiet of the rest of the day. It assaults you and makes you stop whatever you are doing. The effects of a "jet noise day" last beyond that day.

As part of the annual Seafair celebration in Seattle, the Blue Angels, the same jet as a Growler, provide a stunning display of noise and visual excitement, once a year, at a certain time, on a certain day. For residents below the Growlers training airspace, however, thousands of times a year, unannounced, not bound by any public schedule, Growlers provide the opposite of entertainment. Rather, they intrude on virtually every human activity except, perhaps, someone using a chain saw with ear protection already in place.

Psychologists say stress caused by something you control can be beneficial if you can overcome the source of that stress. On the other hand, "bad" stress comes from something unpredictable that you cannot control. That's the kind that makes you sick when you are exposed to it repeatedly. Growler jet noise produces that kind of stress, and meets all the specifications of a public health hazard.

The Navy absolutely needs to train Growler pilots and crews. But their official reports need to show Growler jet noise for what it is, not for something that fits their plans. And they need to conduct Growler training over military reserves, not over communities and public lands.

For a 90-second demonstration of Growler jet noise, please click on the following:

Hello,

I am a 30 year resident of the Methow Valley. I am writing today to express my distress over the proposed expansion of training flights in the Methow Valley and surrounds.

I have had a long career working in early childhood education here in the valley. If I were paid a dollar for every screaming , terrified and traumatized child whom I have comforted over these last 30 years, I would be a wealthy woman. For that in fact is the response of children to these flights and noises. I can only imagine the stress felt by other animals. My response is anger, anger at the shocking violation of our quiet valley, anger at the waste of resources, anger at the absence of respect for the precious place we call home. I used to call your hotline regularly to report the planes that were clearly violating the altitude restrictions. I never got a response, and nothing changed.

It is your obligation to do the research into the impacts of this noise pollution on all species of living things. No expansion without a full EIS.

Thank you, Florence Sawyer

Hello there, Do you intend to spoil a community's hard won & deeply protected rural way of life? With their economy tied closely to eco-commerce and outdoor hiking fishing skiing activities?

With decades of community planning to restore wetlands, preserve forest zones, support farming - a lot will change with jet flyovers, including noise & air pollution.

You could easily destroy years of their collaborative work with the forest service, parks and their communities to balance tourism with a rural lifestyle.

We live on Whidbey Island where the air sonic encroachment of the Navy's jets, along with commercial overhead flights, have taken a distressing toll on our rural neighborhoods, our parks, and remaining wild spaces we protect and foster for wildlife to thrive.

From the ground at Deception Pass State Park, your flyovers are deafening, and we watch eagles and osprey leaves their nests when you roar by.

DO NOT RUIN the Methow!!! Where do Whidbey Islanders go to vacation? You will find us hiking, skiing, recreating on the Methow valley side of the mountains.

Please stop.

To whom it may concern,

NASWI here on Whidbey Island is the worst environmental steward imaginable. Over the period I have lived near Coupeville OLF when initially there was occasionally a Prowler flight to now with the huge increase of EA18G Growlers the spectrum of toxins is horrendous, from deafening jet noise, black particulates in the air, and EA18G Growler malfunction on May 31st, 2023 that rerouted its flight path over the town of Coupeville. One of my acquaintances told me about her experience when she was attending Oak Harbor High School three student friends were exposed to jet fuel mists and subsequently died from cancer and her mother developed sarcoid of the lung and is being monitored by the U of W Hospital for life long consequences from her exposure.

This is a beautiful, pastoral, quiet place to live. When the EA18 Growler jets fly here they destroy what exists in the environment. One has to plan one's day around their flight schedule and one develops anticipation as to when and if they will fly again and repeatedly disrupt one's life. Repeated emails and phone calls to NASWI have resulted in no acknowledgment or amelioration of these problems.

Some of those problems are those who have attempted to hike at Deception Pass Park and have had to abandon their hikes due to outrageous EA18G Growler Jet noise. Essentially, NASWI has taken one's property without compensation for what they are doing and has denied us the ability to access our property or access the natural beauty of the area. Simply stated, they do not give a damn about the environment, the people living or visiting here and anything living in the sea and on the ground.

The noise also affects all of those who do not "hear" in an ordinary sense like plants and the nature spirits in the forests. NASWI military authoritarian consciousness of death and destruction impacts what one can and cannot perceive with the senses. These are pathological forces. There is no such thing as "balance" in this state of affairs, except possibly to have the EA18G Growler jets fly in a remotely secluded place away from civilization. However, let it be understood, that the high carbon dioxide pollution mitigates the use of the EA18G Growler jet in a remote place because of the totality of the number of aircraft and their repeated flight cycles with their huge quantity of CO2 emissions that in the past and currently continue to contribute to global warming and worldwide weather change.

NASWI is not a "good neighbor" by not engaging in community dialog about anything related to their destructive proclivities, hence the emphasis and description of them having the infusion of the being of an authoritarian consciousness of death and destruction. Hence the emphasis on their infusion of pathological beings in what has become their existential crisis. Making the world work for everyone will require collaboration, compassion, and sensitivity to others' needs. NASWI has not demonstrated this capacity and does not wish to embark upon a path to engage in community-building solutions or end the spectrum of toxins I have alluded to.

Regarding the Proposed EA18G Growler Jet Methow Valley Expansion, one only needs to examine NASWI's current insitu Whidbey Island and Olympic Peninsula pathological behavior and its propensity for authoritarian consciousness of death and destruction to forecast more of the same for the Methow Valley Expansion situation. The citizens there would soon become disgruntled as many of us here on Whidbey Island and the Olympic Peninsula have become over the years. NASWI's expansion plan has no justification based on its inherent plausibility when deleterious environmental factors, their failure to complete Judge Jones mandated EIS study and their authoritarian consciousness of death and destruction are focused in one's consciousness and deliberate thinking.

Thank you for the opportunity to comment on these important matters that have affected the Salish Sea Puget Sound Region that hopefully the Methow Valley will not have to fight in subsequent years.

Sincerely,

Ken Simpson

Hi I live on Whidbey Island and attended the Navy's exhibit a number of years ago. I was not impressed and many issues were later raised as to the validity of the proposed impacts for the growlers. Expanding their use further into areas of Washington State is a bad idea. Why they are even near communities is wrongminded. There are vast uninhabited areas in the USA for testing and training that would not impact populations. I do not condone any expansion of growlers in Washington State.

Dear Navy-

I would like my comments for the record be shown that i oppose the growler flights on whidbey island period. and certainly I oppose the proposed expansion of flights around the Methow Valley airspace.

The growlers have increased over the years, and they shouldn't. We have a large population of people hospitals, and schools in the "crash area" of OLF field. I understand there is a base in the desert that would be happy to take the growlers for flight tests. Whidbey Island is not the place.

thank you for your time including my comments.

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Hi All,

Thank you for taking the time to read my comments on the proposed expansion of navy training flights in the Methow. First off, I'd like to thank you for your service. I value our military and grew up in a navy family here in the NW.

I have been coming out to the Methow for almost 15 years now. We have a cabin that we visit as often as we can. One of the major reasons we visit is to get away from the city and enjoy some peace and quiet, the wildlife, and all the outdoor activities there are out there to enjoy. I have heard jets fly overhead in the summertime and it does stand out and make you stop what you're doing since it's such an outlier to the otherwise peace and quiet in the Valley. Even a commercial plane can sound loud out here. I can only imagine the impact the noise has on the wildlife.

I hope the Navy will consider alternative locations for the extending their flights so the Methow Valley can retain its place as one of the NW's best outdoor escapes for people and wildlife.

Thank you for your consideration.

**Subject:** [Non-DoD Source] Comment on Expansion of Navy Overflights in the Methow Valley

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

To Whom it May Concern:

Thank you for the opportunity to comment on the scope of Navy flights over the Methow Valley and North Cascades. We have been living with the overbearing noise from these flights coming at us for many years. The distress and interruption of normal life, however brief, is upsetting at best. Although we realize your pilots need places to train for possible warfare, it has always seemed inappropriate to use wilderness and small, rural towns as potential "targets". Many of us have made this valley our home, have done so specifically to avoid the noise and pollution of more populated areas.

We respectfully request that the Navy follows through on what is required by law by conducting an Environmental Impact Statement regarding the changes you are proposing. By doing this, the Navy should provide an adequate analysis of the significant environmental effects already experienced from current flights and could explore other more appropriate places to expand those flights.

Although invisible, a sense of peace and quiet is a vital draw for our tourism and recreational opportunities—both major components of our local economy. The Navy needs to develop better information on measuring this aural intrusion and how it affects both humans and wildlife. We request the Navy commit to the installation of flight recording devices to provide information on altitude and noise levels heretofore not available.

We appreciate your effort in reading and logging these comments and hope our concerns can be addressed.

Sincerely,

Gail and James Brennan

I am writing to you today to express my opposition to expanded AE-18G flights into the North Cascades (Okanagan D MOA and Mazama ATACC). The AE-18G is the Navy's loudest aircraft and already has had a significant negative impact on the Methow Valley. The quality of life in this normally quiet valley is superb - until the AR-18Gs arrive. I would hate to see this gross disturbance expanded deeper into the North Cascades.

As a flight paramedic, I frequently come home from my busy 24 hour shifts and need to take a nap. Often, AE-18G flights wake me even while wearing earplugs. I have the same experience at night. This compromises my readiness for my next shift. While hiking, Nordic skiing or biking in the region the frequent flights disrupt the quiet that has become so rare in this nation and is critical to our region's economic success. This calmness and serenity is our "product" here. These flights already have a negative economic impact. Enlarging the area of disruption will have an even greater impact on our "brand." You failed to account for this in your current proposal.

Expanding this disruption into an even more serene region is even more impactful in an area that has already done more than its fair share. In your proposal you did not consider other locations for your training, nor migrating to a simulation-based training platform. This area is already greatly impacted by the AE-18G and expansion into even more pristine areas is unacceptable.

It would be one thing if these flights were protecting the USA, but their utility for national defense is dubious. Instead of expanding flights over north central Washington Whidbey Naval Air Station should be working to reduce the significant impact of these events. Add in the enormous impact of greenhouse gasses and other pollutants from these antiquated aircraft and you have an activity that unfairly impacts the people and environment of the North Cascades without significantly contributing to national defense.

Please decline to expand the D MOA for the AE-18G into the North Cascades and work towards reducing and eliminating all current activities in the Methow Valley. At a minimum please complete an EIS for this significant impact.

Warm Regards,  
Rocco Altobelli  
Winthrop, WA.

To Whom it May Concern,

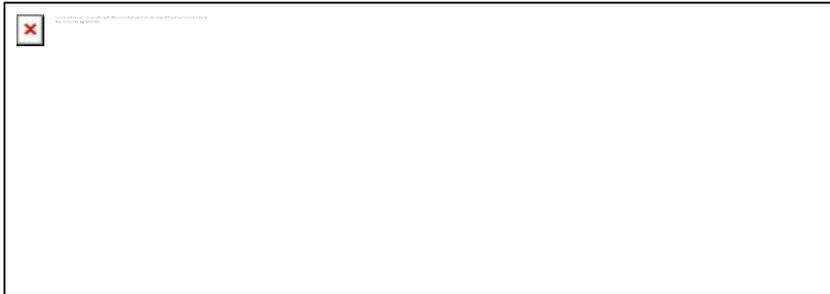

I am adamantly against the extension of your Jet operations area. We run wilderness programs out of the Pasayten Wilderness and your operations would drastically change the emotional and environmental safety and ability to experience and connect to nature which is so important for human health. It would also drastically change the environment of our home in the Methow Valley. I have experienced jets passing over the valley and the acoustics in the valley make for massive and invasive sound pollution that decreases quality of life.

Thank you for your consideration,

Thank you for this opportunity to comment on the proposed expansion of Navy training airspace over the upper Methow Valley and Pasayten wilderness. While recognizing the need for pilot training in general, I very much question the need for doing this directly over a peaceful rural area where people live and recreate and where people and wildlife seek a refuge from this kind of noise. Aren't there alternatives to training here and have these been fairly considered?

It seems to me that this is a situation that requires an EIS, in order to fairly consider alternatives and to try to answer the many questions that have been raised about the true impacts of this kind of activity on rural character, tourism, wildlife, local economies, and air quality (greenhouse gas emissions.)

I hope you can find a way to conduct these flights in a way that does not actively degrade the places and values you are training to defend.

Sincerely,  
Nick Hershenow  
Twisp, WA

I haven't heard any explanation for routing the jet training over the Methow Valley that makes sense. This is a quiet clean community with an economy that is dependent on the kind of tourism that values those qualities.

It feels almost deliberate to choose to inflict so much noise on us.

It's as if you are saying: You people may be quietly working in your gardens, enjoying nature, and raising kids, but we know what's going on in the real world. In the real world there's war and violence and we are getting ready for it. We are defending all of us by training for it, and if you don't like the noise we make, too bad,

That's the feeling I get, and I'm being a little dramatic, but there's some truth to it.

I object to any expansion of your program. The noise is a form of pollution. It should be reduced as much as possible and designed to affect as few communities as possible.

-Phoebe Hershenow

**Subject:** [Non-DoD Source] Comment: Proposed Expanded Growler Flights in the Methow Valley

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

I live in Winthrop in the Methow Valley, and want to comment on this proposed plan of expansion. Thank you for this chance to do that.

The current training flights have a big impact already. At times there's a sudden appearance of a jet flying low, apparently checking out the town, banking over nearby hills, then returning before too long. It seems like it's fun for them to fly right over town. Sometimes a very loud boom seems to come out of nowhere, if we don't happen to see the jet go past; there is a delay between sight and sound of the jets. A woman I know had to get tranquilizers for her pet dog as he got very upset whenever there was jet noise, which happened most days.

The proposal would add flights at night! A big reason we live where we do is the silence we have been able to count on in this rural place. At night the only sound I want to hear (if I happen to be awake) is coyotes howling to regroup. I don't want to be waked up by night-time jets flying right above our town.

A separate change has happened in our valley this winter. Some nearby areas are now closed to humans to help our migratory mule deer and other wildlife. That population has decreased, and winter range is important for its future. The point is to lessen their stress so they have a better chance of survival. Your plan does not take wildlife populations into account. It needs to.

I know the military needs to train, but why was this place chosen when there are many alternatives?

The proposal would also expand where the flights take place. Wilderness areas that are another reason we live here would have flights over them too. The very special parts of a wilderness experience include silence; for those who live here, and the many city folks who come to be able to have those experiences, would all lose an important part of being in a remote and natural place.

The different parts of this plan are presented with just an EA, not a full EIS. These changes are too drastic to rush through with an EA.

I hope you will consider your proposed changes more carefully, and include consideration of the value of silence to humans and animals. The Growler aircraft are the loudest the Navy has. People who live here, people who visit, and wildlife making this their home, should not lose important reasons we came in the first place.

I have copied my Senators, Maria Cantwell and Patty Murray, and my Representative, Dan Newhouse, and have asked for a response from them.

Sincerely,

Carolyn Loren  
Winthrop, Washington

As a full-time resident and business owner in the upper Methow Valley, plus a GA pilot based out of Twisp, WA, I have no problem with Navy Whidbey to expand the existing Okanogan MOA. On rare occasions when low passes are made, yes, there's an awareness that training is going on, but it's infrequent and typically short lived.

As the minimum altitude is 11,500 MSL, noise is not an issue and for people to say so is a complete fabrication. Past experience has shown me that our military pilots and associated ATC operate in a safe, respectful manner while operating within the Okanogan MOA. A little noise is but a small price to pay, if one even considers it a "price!"

Sincere regards,  
Richard LeDuc  
Mazama, WA 98833

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

To Naval Command,

I am writing to express my concern over the expansion of the Okanogan County MOA westward into the heart of the eastern north cascade mountain range. I understand that the Navy needs places for their pilots to train but I feel that there have to be more appropriate places to train than expanding into prime wilderness and mountain recreation areas.

I have lived in the Methow Valley between Twisp and Winthrop for 24 years now and I put up with the occasional roar of military jets overhead as a necessary evil to keep our pilots in top flying shape. But I also spend a lot of time in the mountains and feel that the impact of the extreme noise these jets put out is just completely incompatible with people seeking a wilderness experience and the wildlife found nowhere else.

I would also like to highlight a maneuver where the jet is put into a semi stall tilted up with engines at full bore while the plane moves slowly about. This particular maneuver is so loud that you can't hold a conversation on the ground below. These jets start out over water in Puget Sound. Can they not find a huge patch of water without many boats on their way in or out to practice these "stalls"? Instead of terrifying pets, wildlife, and people trying to talk down in the valley they would be affecting few people if any over the water. Or how about farmland over the Columbia Plateau? It is the one thing that makes me curse those jets and the pilots flying them.

Please reconsider your westward expansion of the Okanogan County MOA.

Sincerely,

David T Harris  
Winthrop, WA 98862

**Subject:** [Non-DoD Source] Eastern Washington Airspace Extension Draft EA

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear,

Dear U.S. Navy personnel,

I submit the following comments on the Draft EA for the Eastern Washington Airspace the U.S. Navy proposes for the creation of new military airspaces for jet training exercises in Washington State. Unfortunately, the proposed airspaces overlap with two legally designated Wildernesses—the Pasayten and Lake Chelan-Sawtooth Wildernesses—not only negatively affecting their solitude for animals and humans alike, but redefining the basic definition of wilderness.

The Navy’s Draft Environmental Assessment (EA) for the Eastern Washington Airspace Extension proposes creation of two new military operations airspaces in addition to other nearby existing military airspaces—the proposed Okanogan D Military Operations (MOA) and the proposed Mazama Air Traffic Control Assigned Airspace (ATCAA).

While the boundaries of these two new airspaces would be the same (the difference in the two airspaces being the vertical height, as the ATCAA would sit atop the MOA), they would significantly overlap both the Pasayten Wilderness and Lake Chelan-Sawtooth Wilderness. The noise from the growler jets would startle wildlife and shatter the silence in both Wildernesses.

The Draft EA’s Alternative 1 (the Preferred Alternative) and Alternative 2 each propose the creation of airspaces that overlap the Wildernesses. Alternative 2 also proposes an increase in the capacity of jet fighter training.

Therefore, the No Action Alternative is the preferred choice in this Draft EA. A full environmental impact statement (EIS) is necessary if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to the designated Wildernesses. The boundaries of the existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Kenneth King

The Growler Jets are so horribly loud that my wife and I were forced out of our lovely home in Coupeville. We bought a second home in Port Angeles, where we stay during the main part of the week. We return to our Coupeville home on the weekends when the jets are not flying. There is something terribly wrong about this. Now the Navy wants to expand its Growler operations into eastern Washington. This is insane.

Please, please do not do this.

Patrick Hurley and Linda Peterson

**Flag Status:** Completed

I appreciate the opportunity to comment on this proposed expansion. Noise impacts are at the heart of our concern about Navy flight operations in this geography. I am urging greater consideration of the following factors:

- greater clarity regarding actual potential noise levels
- more in-depth analysis of potential noise impacts on wildlife
- consideration of the impact of noise on the quality of life in the Methow Valley
- documentation of the potential economic impact of this proposal on high quality recreation in the Methow Valley
- detailed analysis of fuel emission impacts from Growler activity
- analysis of the jet noise impacts in transit from Whidbey Island to conduct operations in North Central Washington

The EA-18G Growler aircraft are the loudest aircraft in the Navy inventory.

I would like to remind the U.S. Navy and our elected officials of our concerns about how and when flights are conducted, to insist on accountability for these operations and to ensure the public has an opportunity to consider their consequences.

Thanks for your consideration of these critical matters,

Andrea Finley; Lopez Island, WA

I want more more growler flights everywhere!  
I propose making the entire state of Washington a MOA, surface to 50,000 feet, supersonic everywhere east of I-5 (I do believe in some limits), and chaff/flare above 100 ft.  
Thank you for your consideration.

**To:** USN NB Kitsap NAVFAC NW SVD WA Mailbox NAVFAC-NW-NEPA  
**Subject:** [Non-DoD Source] Comment on proposed Growler training flights in Methow Valley and North Cascades.

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

- Thanks for this opportunity to comment. We are well aware that the Navy does need places to train.
- We ask for greater clarity regarding actual potential noise levels . Methods of calculating noise levels understate potential actual noise: The Navy uses Day-Night Average (DNL) to indicate an average sound impact, when it is likely to be experienced much more loudly at a given moment. The Navy should indicate instantaneous levels of sound which could be experienced. The lack of loud human noise is a significant attribute drawing people to live or visit the Methow Valley and enjoy the surrounding North Cascades.
- We request more in-depth analysis of potential noise impacts on wildlife. Wildlife, including many protected species, live at high altitudes in the North Cascades where they are more likely to both hear and see low level jet flights, especially in contrast to naturally low background noise. The EA recognizes the lack of good data on this topic. It is incumbent on the Navy to develop information on the real potential effects of noise on wildlife. The analysis should address in greater depth noise impacts on our diverse bird species. Of special note are potential implications of this proposal on areas where grizzly bears may be introduced in the near future
- We ask that the Navy consider the impact of noise on the quality of life in the Methow Valley.
  - The Navy suggests it will follow Best Management Practices for low altitude training, including avoiding populated areas and only flying after dawn and before sunset. However, Table 3-1 in the EA indicates the preferred alternative will include more than 100 jet flights at night. It also defines “daytime” as lasting until 10 pm, after bedtime for many.
  - There is no reference in the EA at all to a question of concern: “What is the impact on childhood learning of aircraft noise in the Methow Valley?” This potentially subtle impact has been highlighted as very important in other places where Navy growlers have operated
- We ask that the Navy document the potential economic impact of this proposal on high quality recreation in the Methow Valley. In recent decades, the Methow Valley has become a year-round destination for recreationists from around the world. The EA dismisses potential impacts by saying noise would “cause minimal disturbance to land based recreational and tourism activities.” (p. 3-53) Given its important as a primary driver of the local economy, this topic deserves much greater attention in an EIS.

Thank you again.

To Whom It May Concern,

Thank-you for this opportunity to comment on the proposed Okanogan D Military Operations Area.

I attended (online) the public meeting held on Feb. 15<sup>th</sup> and have some comments and questions.

I am concerned that the process by which public input is being solicited and by which the environmental assessment is being conducted is omitting key analyses.

The growler jet operations ALREADY have significant environmental impacts. I live in the Bear Creek drainage - it and the surrounding areas include the Dept of Fish and Wildlife and State Park lands including the Rendezvous Wildlife Area, the Methow Wildlife Area, Wildlife Preservation Areas north of Pearrygin Lake, the Pearrygin Lake State Park, and the recreational trails between and around Davis Lake, Bowen Mt., and Cougar Lake. These are areas where human activity has been curtailed to protect fragile wildlife habitat including restrictions on hunting, off-trail vehicles, and - beginning in the winter of 2023 - any kind of human access to protect the migration routes of the dwindling deer population.

These areas of course should be protected to preserve the increasingly stressed natural environments of Washington State, but it must also be recognized that the economy of the Methow Valley depends on the eco-tourism associated with people visiting this area year-round to enjoy its year-round. The intrusive and startling high-vibration boom of low-flying jets most certainly detracts from that experience.

To make blanket statements that the roar of low-flying growlers is not a problem and - therefore - expanding the geographical area of these flights will neither be a problem, is shocking. I have been startled myself by the intense sound generated as the planes pass over the area. It is not possible to ignore – certainly there is no conversing with anyone as the sound is so intense.

It seems that - by definition - flying high-decibel military aircraft through preservation and wildilfe areas should be banned as contravening the goals of those land designations.

The Navy's response, from what I can tell, is that they have cleared this action with - among other parties - the Washington State Dept. of Fish and Wildlife. I think the public deserves a lot more clearly articulated explanations about how these conclusions have been drawn.

Specifically, the Navy should - at a minimum - conduct an Environmental Impact Statement. According to NEPA , an EIS must be prepared when a major action is proposed. The public would then have an opportunity to participate in a more substantive discussion of environmental impacts and it would also have to consider

the alternative of locating these training flights in other, less sensitive, and less heavily populated parts of the State.

The environmental assessments should be expanded to include:

- how the conclusion was reached that these operations are compatible with the goals of designated Wildlife and Wildlife Preserve areas
- average sound impact data should be supplemented with instantaneous sound levels which are much more intrusive and disturbing. It is these levels that people and wildlife are reacting to.
- the Best Management Practices for low altitude training are unsubstantiated as they seem to allow up to 17 hours of daylight flying during the summer and up to 100 flights at night. To put this forth as BMP's and that they are, therefore, of low impact, is absurd.
- the impact of fuel emissions should be assessed, especially given the goals of emissions reduction being adopted throughout the Valley to address the negative affects of wildfire smoke, burn bans to reduce particulate loadings, and community efforts to encourage cleaner woodstove usage. How is dumping jet fuel exhaust into the mix affecting these other efforts?
- easy access transparency for the public to daily information about flight paths, sound levels, emissions, and altitudes. This would provide data for a better informed discussion about impacts and options.

Thank-you again for the attention paid to my concerns.

Brian Russell

To whom it May Concern,

I am a primary care doctor and farmer in the Methow Valley. I live and work here because the ability to have dark skies and relatively quiet environment and clean air (when the fires aren't raging) is such a blessing. We all need a place to go for dark, quiet, natural settings and the Methow Valley draws thousands of visitors year round for these reasons.

When the jets fly over our farm, my kids stop what they are doing to plug their ears due to the noise/discomfort, our horses buck and run (god forbid someone is riding them- we try to stay off of them if we know jets will be by), the deer scatter, our dog howls. I know it's not just a human impact when we get a fly by. It baffles me why you would choose the quietest area with abundant wildlife and some of the most undisturbed natural environment in the US o fly over. There are alternatives more suited for training flights.

Beth DiDomenico, ND

**Subject:** [Non-DoD Source] Eastern Washington Airspace Extension Draft EA

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear,

Dear U.S. Navy,

I am writing to comment on the Draft EA for the proposed Eastern Washington Airspace Extension.

I am concerned that the Draft EA inadequately analyzes impacts on designated wilderness areas. Noise created by this project would shatter my wilderness experience. I agree that we need well-trained pilots, but you do NOT need to sacrifice quietude in wilderness areas to achieve good training for your pilots.

Solitude and quietude are not only valued by me. They are wilderness values identified and protected by Congress, but are not analyzed in your Draft EA. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude and the experience of countless wilderness visitors. You can and should do better.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is bogus. It incorrectly assumes that people only come to visit wilderness on the weekends. Those who visit during the week (like me) often do so to maximize our opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress.

In sum, the No Action Alternative is the best choice in this Draft EA. But clearly a full environmental impact statement (EIS) must be conducted if this project moves ahead as proposed. An EIS must identify and fully analyze all the impacts from the proposal, including those to designated wilderness areas.

Finally, the boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated wilderness areas.

Thank you in advance for considering my views.

Sincerely,  
Thomas Suk  
PO Box 7720  
South Lake Tahoe, CA 96158

**Subject:** [Non-DoD Source] Proposed Expansion of Growler training flights

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

My husband and I reside in Mazama and have lived there for the past 8 years. We lived on Whidbey Island in Coupeville, WA from 2004 until July 2014. It was a beautiful and peaceful place to live until the Growlers were stationed at NAS Whidbey. As more and more Growlers came, the noise became unbearable and the Navy violated their parameters. They flew directly over our home making non stop passes on a circuitous route from the Outlying Field multiple days a week until 1AM for their Touch and Go Training operations. The noise was deafening - over 120 decibels. We could see the pilots sitting in their cockpits from our window. My dog woke up deaf one morning and my hearing has been compromised. Earplugs were not adequate enough for protection. Windows had to be kept closed. We built a bunker in our unfinished basement so we could sleep safely, although not soundly, at night. Not only were we impacted by the noise but both the toxic fuel emissions and powerful electronic bursts emitted by the jets. I had false hopes that the Navy was concerned about our issues. They ignored all of our complaints, did not follow the parameters specified in their EIS and did not stick to their flight schedules. I had multiple conversations with Mike Welding at the base and his response was that I was super sensitive to the Growler noise. My husband and I were forced to put our house on the market in 2012. It was very difficult to sell because of the Growler situation. Our property value was greatly diminished. Living under the jets was literally like living in hell. We did not want to leave but were forced to in order to protect our health and well being.

We moved to Mazama in 2016 because of its pristine and rural setting and nearby access to the North Cascade wilderness. We never expected the Navy to follow us here. Mazama is not the place to expand military training. People come here to escape the noise and crowds of the city to experience quiet in the wilderness, biking, hiking and cross country skiing. The noise from the Growlers will reverberate from the Valley rock walls and will be heard everywhere in our narrow valley. The noise and pollution from these jets will destroy the quality and desirability of the Mazama area. Our homes and property will lose their value. Inns and restaurants will not survive. Mazama is a destination resort and not just a weekend retreat. It is known for its beauty and wilderness experience. The Growlers will be heard everywhere in the Valley and all the trails we love like the PCT. How will the wildlife be protected? How will we protect our horses and pets' hearing?

There is no reference in the EA at all to a question of concern: "What is the impact on childhood learning of aircraft noise in the Methow Valley?" This potentially subtle impact has been highlighted as very important in other places where Navy growlers have operated. This is true for the schools in Coupeville. Children cannot play team sports safely in area parks because of unscheduled Growler activity. Children there are deafened by the jets flying over their ballfields when playing there.

Methods of calculating noise levels understate potential actual noise: The Navy uses Day-Night Average (DNL) to indicate an average sound impact, when it is likely to be experienced much more loudly at a given moment. The Navy should indicate instantaneous levels of sound which could be experienced. The lack of loud human noise is a significant attribute drawing people to live or visit the Methow Valley and enjoy the surrounding North Cascades. Naval operations will allow flights as low as 300 feet above the valley floor.

Have there been any studies done to determine if the low rumbles of the Growlers can trigger avalanches in the winter months? Our area is a winter playground and avalanches can cause death and/or severe injuries. Our area is very prone to wildfires in the summer months. Has any investigation been done to determine if low flying Growlers can cause sparks that will trigger a major wildfire?

Why not have Growlers also stationed at other Naval air bases like China Lake and Lamoore? The Methow Valley and North Cascades already have significant negative impacts from military operations. This is not the place to expand training flights. The proposed expansion will add significantly to noise effects. Cumulative impacts should be analyzed in an EIS.

Why isn't the Navy completing an EIS? An EIS needs to be completed to properly analyze the potential noise impacts on wildlife, including many protected species that live at high altitudes in the North Cascades where they are more likely to both hear and see low level jet flights, especially in contrast to naturally low background noise. The EA recognizes the lack of good data on this topic. It is incumbent on the Navy to develop information on the real potential effects of noise on wildlife. The analysis should address in greater depth noise impacts on our diverse bird species. Of special note are potential implications of this proposal on areas where grizzly bears may be introduced in the near future.

The EA includes no useful information on the transit routes (outbound and inbound). These routes pass over tens of thousands of people and thousands of acres of wilderness, with the same kinds of impacts highlighted above. This is a significant omission that should be addressed. Is there any plan for continuous monitoring of flight activity? As indicated in the Environmental Assessment, very significant Navy operations are already being conducted in this region of North Central Washington (Okanogan A Military Operations Area (MOA), Okanogan B MOA, Okanogan C MOA, Molson ATCAA, Methow ATCAA, Roosevelt A MOA, Roosevelt B MOA, Republic ATCAA). Will the Navy commit to installing flight recording devices to provide this information?

Why wasn't the EA advertised to the public when it first started rather than at completion?

Sincerely yours,

Isobel Kameros and Doug Oliver

**Subject:** [Non-DoD Source] Expansion of Overflights in the Methow Valley and North Cascades

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Hello,

I am a resident of the Methow Valley and I appreciate this opportunity to comment on your proposed expansion of overflights in the Methow Valley and North Cascades.

I am a professional naturalist, videographer, and sound recordist who runs a business called the Methow Natural History Institute that works to educate local residents and visitors about the plants, animals, and wild landscapes of the North Cascades. I also run a Facebook group called Methow Nature Notes with over 2600 followers who are passionate about this landscape and use the Facebook group to share observations and experiences about this unique, wild environment.

We are dismayed and significantly impacted by this proposal and any expansion of overflights in the Methow Valley, or over any adjoining wilderness areas. Even at the current levels, the overflights are immensely impactful and dramatically degrade the experience of living in and visiting the Methow Valley.

The Methow Valley is a key destination for countless visitors who support our local economy by coming to experience this remote, rural landscape. I can't even begin to count how many days of hiking, photographing, and recording natural sounds have been ruined by Navy planes making practice flights here. These flights are not compatible with this rural landscape, nor are they compatible with the neighboring wilderness and National Park. On multiple occasions I have filmed Navy planes flying several hundred feet over the valley floor directly over houses and our town center. Planes frequently circle low over the town of Winthrop in vertical positions with their engines directed downward and creating maximum noise impact.

In addition, I am dismayed to see how the EA doesn't address or acknowledge potential impacts on wildlife and rural communities, or impacts on our high-quality recreation based economy. For example, the EA states that plane noise causes "minimal disturbance to land based recreational and tourism activities" and as a local tour leader I find this statement utterly false. These impacts need to be fully addressed in an EIS and the Navy needs to follow the recommendations of these reports rather than ignoring them.

Thank you for considering my comments. Please find alternatives to expanding and continuing these flights over the Methow Valley and the Pasayten Wilderness.

Sincerely,

David Lukas

To Whom it May Concern,

Thank you for the opportunity to comment on your proposed expansion of military training airspace in Okanogan County.

As a resident of Twisp, I am well aware of the sound and noise impact from the Navy Growler jets. I have lived and worked in the Twisp River area for 27 years and the sudden and crushing sound of these jets is disturbing, to say the least.

This is a place defined by its rural character, peaceful living and is surrounded by designated wilderness. The area which you are proposing to extend into is even more wild and contains a National Park. This degree of noise pollution is untested on the wild species of this area. As we are witness to a rapid and steady decline of our once largest mule deer population in the country, I can't help but wonder about the impact on these remaining animals.

I ask that before you start flying these fast and powerful jets through more wildlife habitat, that you conduct an impact study on the high sound decibels have on wildlife. Your E.A. recognizes the lack of good data of these impacts.

As we navigate our changing climate I question the fuel emission impacts from these jets. The public deserves a clear summary of what these emissions are. This analysis could and should be determined by an E.I.S. rather than an E.A.

Please consider these comments as you determine how to proceed. There are already great impacts from these jets that already occur, please do not add to the sound pollution in an area that has been vastly protected by governmental agencies and private organizations. This is home to a large band of wilderness and its many inhabitants.

Thank you,  
Kelleigh McMillan  
268 Twisp River Road  
Twisp, WA. 98856

To Whom It May Concern,

Thank-you for this opportunity to comment on the proposed Okanogan D Military Operations Area.

I attended (online) the public meeting held on Feb. 15<sup>th</sup> and have some comments and questions.

I am concerned that the process by which public input is being solicited and by which the environmental assessment is being conducted is omitting key analyses.

The growler jet operations ALREADY have significant environmental impacts. I live in the Bear Creek drainage - it and the surrounding areas include the Dept of Fish and Wildlife and State Park lands including the Rendezvous Wildlife Area, the Methow Wildlife Area, Wildlife Preservation Areas north of Pearrygin Lake, the Pearrygin Lake State Park, and the recreational trails between and around Davis Lake, Bowen Mt., and Cougar Lake. These are areas where human activity has been curtailed to protect fragile wildlife habitat including restrictions on hunting, off-trail vehicles, and - beginning in the winter of 2023 - any kind of human access to protect the migration routes of the dwindling deer population.

These areas of course should be protected to preserve the increasingly stressed natural environments of Washington State, but it must also be recognized that the economy of the Methow Valley depends on the eco-tourism associated with people visiting this area year-round to enjoy its year-round. The intrusive and startling high-vibration boom of low-flying jets most certainly detracts from that experience.

To make blanket statements that the roar of low-flying growlers is not a problem and - therefore - expanding the geographical area of these flights will neither be a problem, is shocking. I have been startled myself by the boom of these planes, woken up, rushed to the window, comforted young children, and have seen them BENEATH the top of Bowen Mt, which is 3,700 ft., outside my window. I have noticed deer, flocks of birds, horses, cows start to react in fear when these planes come through - how could they not?

It seems that - by definition - flying high-decibel military aircraft through preservation and wildilfe areas should be banned as contravening the goals of those land designations.

The Navy's response, from what I can tell, is that they have cleared this action with - among other parties - the Washington State Dept. of Fish and Wildlife. I think the public deserves a lot more clearly articulated explanations about how these conclusions have been drawn.

Specifically, the Navy should - at a minimum - conduct an Environmental Impact Statement. According to NEPA, an EIS must be prepared when a major action is proposed. The public would then have an opportunity to participate in a more substantive discussion of environmental impacts and it would also have to consider the alternative of locating these training flights in other, less sensitive, and less heavily populated parts of the State.

The environmental assessments should be expanded to include:

- how the conclusion was reached that these operations are compatible with the goals of designated Wildlife and Wildlife Preserve areas
- average sound impact data should be supplemented with instantaneous sound levels which are much more intrusive and disturbing. It is these levels that people and wildlife are reacting to.
- the Best Management Practices for low altitude training are unsubstantiated as they seem to allow up to 17 hours of daylight flying during the summer and up to 100 flights at night. To put this forth as BMP's and that they are, therefore, of low impact, is absurd.
- the impact of fuel emissions should be assessed, especially given the goals of emissions reduction being adopted throughout the Valley to address the negative affects of wildfire smoke, burn bans to reduce particulate loadings, and community efforts to encourage cleaner woodstove usage. How is dumping jet fuel exhaust into the mix affecting these other efforts?
- easy access transparency for the public to daily information about flight paths, sound levels, emissions, and altitudes. This would provide data for a better informed discussion about impacts and options.

We as well live in the Bear Creek Basin.

we do not want these aircrafts flying over the North Cascades or anywhere over the methow valley. go fly them over the desert in Nevada where there arent any people, or alaska, or the pacific ocean. or work something out with canada, and practice over some uninhabited part of BC. We dont want the noise, pollution, or light pollution. given all the challenges the residents of Whidbey island have had getting the navy to cooperate on noise mitigation efforts there, I can see no benefit to increasing the navy's use of our pristine airspace.

Thank you. Peter Loft, Mazama WA

To Whom It May Concern,

Thank-you for this opportunity to comment on the proposed Okanogan D Military Operations Area.

I attended (online) the public meeting held on Feb. 15<sup>th</sup> and have some comments and questions.

I am concerned that the process by which public input is being solicited and by which the environmental assessment is being conducted is omitting key analyses.

The growler jet operations ALREADY have significant environmental impacts. I live in the Bear Creek drainage - it and the surrounding areas include the Dept of Fish and Wildlife and State Park lands including the Rendezvous Wildlife Area, the Methow Wildlife Area, Wildlife Preservation Areas north of Pearrygin Lake, the Pearrygin Lake State Park, and the recreational trails between and around Davis Lake, Bowen Mt., and Cougar Lake. These are areas where human activity has been curtailed to protect fragile wildlife habitat including restrictions on hunting, off-trail vehicles, and - beginning in the winter of 2023 - any kind of human access to protect the migration routes of the dwindling deer population.

These areas of course should be protected to preserve the increasingly stressed natural environments of Washington State, but it must also be recognized that the economy of the Methow Valley depends on the eco-tourism associated with people visiting this area year-round to enjoy its year-round. The intrusive and startling high-vibration boom of low-flying jets most certainly detracts from that experience.

To make blanket statements that the roar of low-flying growlers is not a problem and - therefore - expanding the geographical area of these flights will neither be a problem, is shocking. I have been startled myself by the boom of these planes, woken up, rushed to the window, comforted young children, and have seen them BENEATH the top of Bowen Mt, which is 3,700 ft., outside my window. I have noticed deer, flocks of birds, horses, cows start to react in fear when these planes come through - how could they not?

It seems that - by definition - flying high-decibel military aircraft through preservation and wildilfe areas should be banned as contravening the goals of those land designations.

The Navy's response, from what I can tell, is that they have cleared this action with - among other parties - the Washington State Dept. of Fish and Wildlife. I think the public deserves a lot more clearly articulated explanations about how these conclusions have been drawn.

Specifically, the Navy should - at a minimum - conduct an Environmental Impact Statement. According to NEPA , an EIS must be prepared when a major action is proposed. The public would then have an opportunity

to participate in a more substantive discussion of environmental impacts and it would also have to consider the alternative of locating these training flights in other, less sensitive, and less heavily populated parts of the State.

The environmental assessments should be expanded to include:

- how the conclusion was reached that these operations are compatible with the goals of designated Wildlife and Wildlife Preserve areas
- average sound impact data should be supplemented with instantaneous sound levels which are much more intrusive and disturbing. It is these levels that people and wildlife are reacting to.
- the Best Management Practices for low altitude training are unsubstantiated as they seem to allow up to 17 hours of daylight flying during the summer and up to 100 flights at night. To put this forth as BMP's and that they are, therefore, of low impact, is absurd.

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Greetings from the Methow Valley, U.S. Navy.

This dilemma regarding the U.S. Navy "Growler" jets and hearing thoughts of them being here  
In the paradise valley that we all cherish and share.  
One side says it is the "Sound of Freedom"  
And irrevocably one side says it is the "Sound of Destruction"  
My thought is that it disturbs the wildlife that live here and wildlife thats regaining numbers  
From being nearly extinct in the past century or so!  
I could discuss more about how it is downright disturbing for not only myself but many who I know in these  
valleys.  
I cannot change redundant politics because of the oppressive ignorance and complacency that we,  
unfortunately all endure from either "side" or takes on government and the agendas of those in and with power.  
I see these "growlers" as a boastful and destructive tool of death of  
"the enemy" and innocents alike, we don't need a reminder that colonization of everything that is good, pure,  
and Holy like these lands are continually being ravaged and polluted with wildlife being pushed to the brinks  
and even having their last clutches being swept from underneath them like throughout American, and recent  
western civilization's history!

With best regards,  
-Sky

To whom it may concern,

It is more than enough that the increasingly-populated areas around Winthrop and Twisp be subjected to persistent jet noise. I strongly oppose the expansion of the training airspace, as well as the creation of any new airspace designated for Growler training. The determination to test over this area was made at a time when the population was much less dense than it is now. Please consider shrinking the testing area as well as prohibiting training flights below 25,000 feet over any populated areas and all Wilderness areas. The noise is disruptive and harmful to residents and wildlife, and disrupts protected populations of endangered species living in the North Cascades and surrounding Wilderness areas.

Please expect that strict adherence to the letter and intent of NEPA is the bare minimum due diligence for this proposal. Thank you for doing your job and considering the inputs and needs of the communities, human and otherwise, that you intend to affect.

Sincerely,  
Lazo Gitchos

18 February 2024

I'm writing to comment about the Navy jets that fly over the Methow Valley, WA. Thank you for the opportunity to comment.

My partner and I bought a house in the Methow without knowing about the jets. I would never have purchased knowingly under a military jet flight zone. The jets rattle the windows and interrupt whatever I am doing – writing or mentoring via Zoom, seeking quiet and solitude, gardening or hosting friends. This is already happening. Expanding the military operations will only make things worse for the humans here, not to mention the wild creatures who get no vote nor voice in human actions.

The Navy must conduct an Environmental Impact Statement and allow the public to review alternatives to flying over the North Cascades and the Methow Valley. My concerns are noise, which is already disturbing, impacts to wildlife, pollution, contribution to climate change, not to mention further escalation of the war machine rather than peace studies.

Thank you for consideration,

Dr. Geneen Marie Haugen  
Twisp, WA

To whom it may concern,

I live in the Methow, and I'm already under a practice area where planes regularly fly loud and low. (And lower than stated at times!)

Further expansion of flight areas will be to the detriment of any human or animal under it. While flight training is needed, consider expanding practice areas to areas that already have high noise and vehicle impacts instead of creating new ones.

I've had the experience in the Stehekin Valley (not on the map, but nonetheless) of standing in the river fishing when a jet came roaring down the river below the valley ridges scaring the crap out of us. There are just some places these machines don't belong.

Thank you,

Sarah Lane

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

To whom it may concern,  
Thank you for the opportunity to comment on the expansion of Navy growler overflights in the Cascades and east of the Okanogan Valley.

We live on Twisp River Road and have experienced the growler overflights. When they are low and fast, it is not a pleasant to experience as they come from over the hills with little warning they are coming. I have also managed a goat dairy farther up Twisp River and have had the goats scatter from fright when the jets pass over too low. Obviously, the jets can affect wildlife too if they affect domestic goats like I have witnessed.

What concerns me regarding expanding the flights into the heart of the Cascade mountains, is the effects on wildlife. These jets flying as low as 2500' above the mountains could be very frightening to wildlife, let alone the disturbance to people hiking in the wilderness.

I think there needs to be a better analysis of these expansion plans. An EIS would be a better way to evaluate harmful effects, as well as offer alternatives to what has been offered in this EA.

Hello,

I am a full time resident in Winthrop in the Methow Valley. I am writing to comment on the Navy training flights which fly over our valley.

While realizing you need to train somewhere, flying over a quiet, rural valley full of wildlife does not seem the appropriate place. I have lived here for years and the unexpected roar of a Navy jet, while common, continues to be startling and upsetting. We live here for the quiet, the dark, the animals, the space. Having a jet roar overhead is the antithesis of what this place is about. Suddenly we can't even hear ourselves talk. I can't imagine how disrupting it is the the wildlife.

As you're considering expanding your training zone around the North Cascades and Methow Valley, I'd ask you conduct an EIS as is required when a major federal action is proposed. Please look for other areas which are either already impacted by noise and development or in unpopulated areas to conduct your training. Please study the impacts your training has on noise, wildlife and climate.

I appreciate the opportunity to comment. This is an important issue to us in the Methow Valley.

Thank you,  
Jane Hubrig  
Winthrop, WA

Greetings,

I appreciate the opportunity to voice my concern over the proposed expansion of the Navy's MOA in Okanogan County. Okanogan D MOA expands existing training airspace along the western boundary to include portions of the Pasayten and Lake Chelan-Sawtooth Wilderness areas. Therein lies my concern.

A look at the map of the proposed MOA makes one realize that it overlaps an area that has been ravaged in recent years by the effects of Climate Change and associated Drought and Wildfires. The impacts to wildlife have been profound. Adding additional stressors to the environment of this area in the form of EA-18G Growler training seems like a bad idea. Wildlife populations already face significant hurdles if they can hope to recover and adapt to some of the new realities.

Please reconsider the Okanogan D MOA, or at the very least conduct a mandated Environmental Impact Statement (EIS) prior to initiating training. Understanding the impacts and the available alternatives is the very least that the Navy can do.

Thank you for your attention.

Sincerely,

Robert Alexander  
Mazama, WA

**Sent:** Saturday, February 17, 2024 11:18 AM  
**To:** USN NB Kitsap NAVFAC NW SVD WA Mailbox NAVFAC-NW-NEPA  
**Subject:** [Non-DoD Source] NO ACTION ON WA STATE AIRSPACE EXTENSION UNTIL A COURT-ORDERED EIS IS COMPLETED

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

- To whom it may concern,
- 
- The Navy has been ordered by the federal court to complete a new Environmental Impact Statement (EIS) for the NASWI expansion on four counts: 1) impact on classroom learning; 2) disclosure of the basis for greenhouse gas emissions calculations; 3) species-specific impacts on birds; 4) detailed consideration of an El Centro, California, alternative. Until the new EIS is completed, the Navy should not be considering a military training airspace extension in Washington State.
- 
- The Navy has been ordered by the court to consider an El Centro alternative for the Growlers to train — as the Navy has not completed this order, this is not the time to allow the Navy to consider expanding the military training airspace in Washington State.
- 
- Our household wants a complete EIS for the proposed airspace extension, not an internal Navy assessment (EA) which requires no accountability to the communities impacted.
- 
- • We demand “No Action” until an EIS is completed on this proposal.
- 
- Like Whidbey Island, the Methow Valley has significant reliance on tourism as an economic driver. Increased jet noise may have significant economic, environmental, and community health implications for the Methow Valley, as it has for Whidbey Island and the Olympic Peninsula.
- 
- The Navy has previously deflected critical analysis of jet noise impacts, specifically in regards to harm to both human and environmental health:
  - Growler jet noise has been reported between 70 dB - 130 dB at people’s homes. Research on the impact of noise has found that noise between 40-55 dB can harm human mental health, concentration, memory, and cognition. Sound levels above 55 dB are associated with serious cardiovascular health effects, including hypertension, stroke, and risk of heart disease. Research has also found that noise can cause wildlife to change their behavior, heighten stress, and even have fewer offspring.
  - With respect to the impact of this increased operations on childhood learning, the Navy has acknowledged numerous studies that concluded that aircraft noise would measurably impact learning but then arbitrarily concluded that because it could not quantify exactly how the increased operations would interfere with childhood learning, no further analysis was necessary.
  - The Navy has repeatedly stated that increased noise would have species-specific impacts on the many bird species in the affected area. Yet, they continue to decline doing species-specific research. Instead, the Navy simply concluded that certain species were not adversely affected and then extrapolated that all the other species would not be affected.

**We demand “No Action” on this proposal until a full Environmental Impact Statement (EIS) is completed under the guidelines of the National Environmental Policy Act (NEPA) for this latest airspace extension request for the Navy’s EA-18G Growlers to train over more of northeast Washington.**

Thank you for your consideration,  
Christy Rodgers and Marcus Duskin, Whidbey Island, WA

Hello, I am writing to comment of increased growler flights over the Methow Valley and Sawtooth Wilderness areas. I object to this proposed increase. We already have flights disrupting the peace of this beautiful valley. While I understand the need for training, I urge you to consider other locations.

Please file an EIS, because this proposed action,, requires more studying. These growler and low flying planes that already buzz our valley disturb the wild animals and domestic livestock. I have had young turkeys run and crash into fencing, injuring themselves, because of the sudden roar.

The Wibey island communities are already under a constants roar, and this makes a beautiful communities unbearable. Training over our small community is already a reality. That noise pollution does not make people fell better. It seems unthinkable that you feel you can increase this over our homes. This is not the sound of freedom. Thank you for considering other areas to train. Do an EIS.

Janie Lewis

### My Growler comments

Increasing Growler area and flights in Washington State is a real bad idea for humans and all other mammals in it's flight path. I have been exposed hundreds of times to very loud flyovers in Okanogan County. I believe that the jets routinely fly lower than is legal.

Sometimes it is so loud that I am sure every wildlife with ears in cringing in fear. As I am. Though I also have the emotion of anger.

It is a crime against Nature that you fly these jets over some of the wildest parts of Washington. Why don't you fly them over Seattle instead.

You may not be judged in human courts, but I believe you will be judged when you get to the pearly gates.

Michael Pilarski

To whom it may concern,

I appreciate the opportunity to comment on the proposed expansion of the flight training area in North Central Washington. I appreciate that the navy needs space for training, and I have lived comfortably with jet noise on Whidbey Island, the Olympic Peninsula and now in the Methow Valley. I also think that an expansion of the flight zone over the Mazama and North Cascades area is not appropriate for the region.

I would like to ask that a thorough EIS is conducted before expanding flight training over the north cascades. As a farmer, I can see the daily impact that military jet noise has on livestock, and I imagine it may have a significant impact on wildlife as well. While I understand the value of flying over less populated areas, I wonder if there would be less noticeable impact on people and the character of their communities if flights took place in more populated areas where equipment and flight noise is already regular.

Thank you for your consideration,

Anna Rose

I'm a 20 year Methow Valley resident and have always noticed and objected to the existing disturbance of your fly overs.

The mental disruption and intrusion this causes to adults is comprehensible. But i have watched my children become totally disoriented by the loud noise your aircraft creates. And I see time and time again what it does to livestock. I can't fathom what it does to animals in the wild Pasayten.

Can you explain why you can't fly over the Pacific Ocean which is far closer then flying over half of WA to get to the North Cascades and Methow Valley.

Thank you for soliciting the strong opinions of our community.

Thank you for the opportunity to comment on the proposal for establishing a new military training airspace in Okanogan County, which would extend the existing airspace to Mazama and the east slopes of the Cascades.

I understand that there will be no increase in the number of training flights. However the new proposal allows planes to fly in remote areas of the Pasayton and Chelan-Sawtooth Wilderness at a minimum altitude of 11,500 feet above sea level which would be as close as 2500 ft above the mountains. The primary aircraft used for training will be the EA-18G Growler aircraft. We do hear these aircraft in the lower Methow Valley. They are extremely loud and the sound reverberates for a long time. They are impossible to ignore. The noise disrupts sleep, nature-based activities like hiking, fishing, and scares the stuffing out of tourists! The noise startles wildlife as well as domestic herds. People live in this valley and it's economy is supported through tourism because of the quiet and surrounding nature. Please do not shatter our way of life and livelihood further by expanding the area in our upper valley and East slopes of the North Cascades.

I understand and support the need to train pilots. However I urge you to consider other areas. Please complete an Environmental Impact study to fully understand the detrimental impact this expansion will have on our upper valley and mountain recreation areas.

Thank you for your consideration.

Marcia Navajas  
Winthrop, Washington

Hello, I'm writing as a homeowner in the Methow Valley, 3 miles outside of Winthrop on a hill at 3400 feet elevation. We own over 200 acres and love to hike, ski and snowshoe our land. We also have a peak near our home at close to 4K feet. We frequently see growlers flying past us as we do these things on our land. Sometimes they are above us and not infrequently they are below us flying up valleys nearby. I'm in awe of these planes but I think that they should not be allowed to fly over wilderness areas and disturb wildlife and people who are looking for peace and quiet. I think the navy needs to do an environmental impact study on the sound/noise that these planes produce for those of us on the ground. I realize we need to train our military to be the best that they can be, but in peacetime (whenever that is) taking into account the organisms that are affected by the growlers needs to be taken into consideration. Thanks, Gro Buer 72 Owl Peak Rd Winthrop

**Flag Status:** Completed

Dear,

Jesus Christ (he'd be SOOO disappointed in you .... )

War, military, cops, war, war, military, death, my kids can't afford fresh vegetables, we can't afford health care, poor people finance the most obscene level of rich military power in the world .. LITERALLY OBSCENE!!

We have a little space to maybe take a nice hike once in awhile .. and YOU WANT TO RUIN IT WITH MILITARY JET EXERCISES??!!!!!!

You have no thought for the wild critters who will have to scatter as you scare them out of their very habitat??

Keep your f-ing f-jets out of our peace and quiet.  
Who do you think you are, ya big dick-wagging assholes?

Every f-ing day I have to fight and scrape and beg for the most basic decency in this f-up nation.

You'll try to tell me this is for 'freedom' ...you murderous, invasive species.

Shut up.

Just Shut.UP.

I use my precious time to beg for things no one should ever be thinking of doing.

NO F-ING WAY, gentleman.

That's how I really feel...

Now, to put it more nicely:

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,

Dear Navy,

While I understand the importance of air flight training, residents in the Methow Valley are already subjected to loud sudden noise from the planes. Adding additional flights with even louder planes will severely impact the quality of life for the residents and animals here.

Please consider redirecting your flights away from the Methow Valley and North Cascades.

Thank you,

M.Markusson  
Winthrop, WA

Sirs,  
I'm writing to say that the Navy Fliers need all the training they can get, to protect the USA from those that wish us harm.  
We call them Freedom Flights as they go past our home, so close that you could recognise the pilot, if he wasn't wearing goggles.  
I currently live where the Navy fliers are a few feet from my house above the Chewuch River and below the Valley ridgetops.  
It's just a few seconds of noise, a small price to pay for Military Excellence.

We don't need an EIS.  
People are so overblown on this request and way to self-righteous.

I hope the Navy gets the expanded Training Area they are requesting.

Jim Rankin  
584A W Chewuch Rd

**Subject:** [Non-DoD Source] Eastern Washington Airspace Extension Draft EA

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

I came to Washington State 37 years ago because it offered me work options with opportunities to get a break from people and the work world. Here in all parts of the state, I have found recreation, solitude, and peace when I needed it. I feel lucky to live here. the Eastern Washington Airspace Extension is one of my favorite parts of the state.

For years I have looked forward to being able to take longer trips into the wilderness that can avoid the heavier weekend traffic.

As a recent retiree, I have finally reached that point in my life. I want to be able to access the Pasayten Wilderness and Lake Chelan-Sawtooth Wilderness areas where I have found peace and solitude for years.

A full environmental impact statement (EIS) must be conducted. That will establish a baseline so that if this project moves ahead, there will be a record of the impacts of the proposed project, including those to designated Wilderness.

Is there some way to redraw the boundaries of all existing MOAs and ATCAAs to eliminate overlap with designated Wildernesses while still giving Navy pilots the training areas they need?

Given the lack of baseline info without a full EIS, the No Action Alternative is the best choice in this Draft EA.

Thank you.

Margaret Crosby

Sincerely,  
Margaret Crosby

To whom it may concern:

I live in the Methow Valley in Okanogan County. My home is directly under one of your regular flight paths and we see the Growlers regularly.

I am writing you a letter in FULL SUPPORT of the expanded MOA in the Okanogan.

I appreciate your commitment to safety and excellence. I understand the need for space to train and maintain competency. I love hearing and seeing the jets.

And with full transparency I am endlessly proud to be the mother of one your current EA-18 pilots.

I am copying this letter to Senators Murray and Cantwell and Representative Newhouse.

Respectfully,

Jenny Taylor  
Rendezvous Road, Winthrop

To whom it may concern, we have been enjoying and live in the Methow for over 10 years.

The current level of flight traffic above us is already very noticeable, and at times quite distressing.

Any increase of this activity is unacceptable to us. It would affect people and wildlife in a very negative way.

As tax payers we have a right to choose where we live and the level of noise we live with ! Thankyou for your consideration of our concerns, sincerely Jessica and Joe Klein, 3 Merganser Ln, Winthrop, Wa 98862

**Subject:** [Non-DoD Source] Comment on MOA Expansion

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

To Whom it May Concern:

I am writing in regard to the comment period for the proposed Military Operating Area expansion into the upper Methow Valley and eastern slope of the Cascades.

I oppose the expansion as it moves flight noise impact into some of the quietest places in the United States. As a former volunteer for the Natural Sounds and Night Skies Division of the U.S. Park Service, where I was an advisor on mapping technology, I can attest to the rare treasure that is the Natural Soundscape of the upper Methow Valley and North Cascades eastern slope. Please, do not fly Growler Jets over these pristine areas. I live in the current MOA and experience the Growlers on a regular bases. I also the stress on wildlife from the flights. Down here in the lower Methow it is not ideal, but it is tolerable. But the upper Methow and eastern slope of the Cascades are home to several threatened or endangered species. Introducing further aggravation to their survival is something I strongly oppose. There are very few places left where people and animals alike can still spend some time in the wild. Flying Growlers over these last areas would be a huge loss for sportsmen, environmentalists, and wildlife alike.

Thank you for reading my comments and for considering my input. I appreciate your time and diligence while evaluating the feasibility of expanding the current MOA.

Sincerely,  
Lynn Scharf

As a property owner in the Methow Valley (Mazama), I'm writing to express my concern and dismay over your plan to expand the training-flight area over our community. Not only will the additional noise further stress children, the elderly - basically the valley's entire human population - but the decision is particularly ill-advised considering that the overflight area includes some of the only remaining habitat for several federally listed critically endangered species (wolverines, lynx, etc.). Flyovers at terrifying volume will certainly interfere with these species' well-being and reproduction. The North Cascades are internationally recognized as a superlative natural gem, and military operations have no place in such an environment. My family strongly urges you to reconsider this damaging expansion in favor of some other area that isn't home to multiple endangered species.

Respectfully,

Dennis Rea

To whom it may concern,

I am against expansion of growler jet military operations near or over the Methow Valley and in the North Cascade mountains, especially in the National Park boundaries or near the boundaries. This place relies on outdoor recreation and the extreme noise made by jets flying overhead disturbs the peace and tranquility of these places for those humans using them as well as for the animals who live there. I'd like to see the Navy and Air force make less noisy jets and save us all from the noisy disturbances of jet overflights. It might also be good to be flying quiet on the battle field...? Noise pollution is something we all need to become more aware of and try to reduce. It is proven to have harmful effects on our environment and on the health of people.

Thank you.

Dear,

Dear U.S. Navy personnel,

Living in an area continually subject to the unremitting racket of military jet pilot training I am horrified to think of this happening in the Lake Chelan-Sawtooth Wilderness, whatever the day of the week. Though I don't like the sound of so many jets, I would much rather hear it here in my city environment than have it take place in a natural wilderness setting such as Pasayten and Lake Chelan. Does our society have no recognition and respect for the world we were gifted? The quiet and natural sounds of the wilderness are a treasure, for both humans and wildlife. There are plenty of other places to let jets practice where their noise fades into the existing disturbance.

Thank you,

Jan Bell  
Tucson, Arizona

Hiker and visitor/appreciator of the Lake Chelan-Sawtooth wilderness

Dear,

Thank you for the opportunity to comment regarding the Draft EA for the proposed Eastern Washington Airspace Extension. Having experienced firsthand the rugged and unique Wilderness character of the Pasayten - one of the highlights of my life - I am compelled to comment that the Draft EA inadequately analyzes effects on Wilderness. The Draft EA does not analyze the impacts on the Wilderness values of solitude and quiet; the jet noise would disrupt wildlife as well as human visitors to these areas.

The No Action Alternative is the best choice in this Draft EA.

However, if the project moves forward, a full environmental impact statement (EIS) is required.

Finally, the boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Kennard Woods  
274 Bamboo Forest Pl  
Las Vegas, NV 89138

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Comments:

1. I am concerned about lack of notice of the draft EA to residents of the Methow Valley and environmental groups that protect that area. In particular, I attended both online meetings held by the Navy to answer questions about the draft EA. In one of the meetings which occurred on February 13 and 15, we learned that the Navy had not sent a draft to the Winthrop public library. When asked specifically about who was notified of the draft EA and when, the Navy mentioned the "stakeholders," but beyond that exactly who was notified was fairly nebulous. Clearly, the residents of Winthrop will have inadequate notice to comment on the proposed expansion by the deadline for doing so, February 23, 2024.

Lack of comment on the EA generally most likely reflects lack of notice, rather than lack of interest. The Navy should be required to disclose exactly who was notified, how and when. If notice was insufficient, the Navy should be required to provide proper notice with adequate time for the public to comment, and a full EIS is warranted.

2. I am concerned the Navy has not adequately explained the purpose of the expansion. In the online meeting, I asked about the purpose reflected in the following statement from the EA:

"The purpose of the Proposed Action is to enhance training and operational readiness of aircrews by maintaining skills, providing the ability to accommodate future training requirements, and maximizing training opportunities."

In particular, I asked (in writing in Q&A) about what future training requirements are anticipated, and the Navy did not answer the question. The Navy framed the proposed expansion as a slight adjustment that would have little impact on the national forests and wilderness areas below (nothing to see here). But clearly the Navy anticipates a future increase in the operations in the proposed expansion area, otherwise the Navy would not have talked about "future training requirements" and "maximizing training opportunities."

I see this proposed "minimal impact" expansion as a foothold into future "maximum impact." This lack of transparency merits a full EIS with more than conclusory statements by the Navy, particularly because the Navy has demonstrated lack of transparency in the past. A Washington federal court ruled that the Navy violated NEPA by conducting an insufficient EIS as justification for adding additional growler flights and operations to Whidbey Island.

3. The Methow Valley has significant reliance on tourism as an economic driver. Increased jet noise may have significant economic, environmental and community health implications for the Methow Valley, especially since the Navy anticipates a future increase in the operations in the proposed training airspace. A full EIS would provide accountability to the communities impacted. There should be "no action" until an EIS is completed.

4. The proposed expansion includes the North Cascades. The North Cascades' rugged beauty is characterized by jagged peaks, deep forested valleys, cascading waterfalls, and over 300 glaciers. Growler training flights over these areas are incompatible with the purpose and use of the area, i.e., wilderness hiking and camping opportunities, and to provide habitat for wildlife. This is some of the finest mountain country in North America.

The Navy has already ruined other Washington treasures, such as the Deception Pass State Park. This area features two islands connected by iconic bridges, rugged ocean cliffs and old growth forests. Since the Navy expanded growler

training flights over this area, there is no quiet or rest. Its like camping in a war zone. There should be "no action" for this proposed expansion until a full EIS is completed.

5. Research has also found that noise can cause wildlife to change their behavior, heighten stress, and have fewer offspring. With respect to the proposed expansion, the Navy simply concluded that certain species of wildlife were not adversely affected and then extrapolated that all the other species would not be affected. There should be "no action" on this proposal until a full EIS is completed.

6. In the online meeting, I asked about alternative areas the Navy considered for the expansion area, such as to the south. Alternatively, could the expansion area be to the east, into Idaho. While the Navy touched on why it did not want to expand to the south, the response was in general terms only. The Navy did not answer my question about expansion into Idaho, leaving this issue unaddressed. Why could not the expansion be to the east instead of the west?

In addition, the Navy refused to address questions by others about alternative places for the growlers to train. Others cited several specific areas that could be considered. However, the Navy refused to answer the questions, saying that was outside the scope of this draft EA. Since the Navy has been ordered by a Washington federal court to consider an El Centro alternative for the growlers to train, but has not yet complied with the order, the Navy should not be considering expanding the military training airspace within Washington. The Navy's lack of transparency also merits a full EIS. There should be "no action" until this is done.

Dear,  
Dear U.S. Navy personnel,  
I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.  
1. The Draft EA inadequately analyzes impacts on Wilderness. For example: Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude. Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.  
Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!  
2. The No Action Alternative is the best choice in this Draft EA.  
3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.  
4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.  
Thank you.  
Sincerely,

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension. I agree with Wilderness Watch that "while we understand the need for Navy pilots to be adequately trained, we shouldn't have to sacrifice our wilderness heritage to do so."

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is utter nonsense. It also wrongfully and arrogantly assumes that designated Wilderness Areas are only for and about people. But Wilderness is also as much for wildlife. These areas were set aside to provide for their security and well-being for many species, including those that may be threatened or endangered. Military aircraft sounds and other stressors might certainly disrupt their natural behaviors/health.

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses. I support military readiness but should not require the loss or other compromise of our nation's natural heritage.

The precedent of this case is of utmost importance. Consider the AF proposed Low Altitude Supersonic Flights over Gila NF and that several years ago, a political committee voted to transfer the administration of our nation's oldest and largest National Wildlife Refuge to an adjacent military bombing range, shortly after a different political party's committee had voted no.

The second committees' flagrant disregard for our nation's oldest and largest NWR is especially concerning and should encourage citizens to recall President General Eisenhower's (one of our nation's finest) speech warning of an ever increasingly politically powerful military industrial complex.

What is especially troublesome was that little was mentioned in the media about this public land transfer that led to citizens' outcry that the NWR transfer be withdrawn.

But what would have been the media's response if the land was a National Monument instead? Would be interesting to know how many in that political committee who advocated for the land transfer to military administration had also been staunch supporters of transferring public wildlands into National Monument status. Might confirm what many citizens have suspected - that those elected officials' practices are often more about political power, using public lands as political pawns. During gvnmt shutdowns, NM and NP sites often close to the public.

Sincerely,  
Dan McCurdy

Dear,

Dear U.S. Navy personnel,

Please accept the following comment submission on the Draft EA of the Eastern Washington Airspace Extension proposal.

--The Draft EA fails to adequately account for harms to Our Wilderness. The serenity provided by the absence of the mechanical noise of combustion or jet engines is imperative to the natural conditions of Wilderness. The peace and agreeability provided by natural ambient sound is a vibrantly wild characteristic highly valued, coveted, federally protected, and guaranteed by responsible agencies. Jet-noise may severely damage the hearing of non-humans on the ground, with more sensitive listening receptors than Our human ears.

I assure you the sound and tactile vibration caused by military-grade aviation technology above designated Wilderness is not just a nuisance. This violation of airspace is emotionally, mentally, physically, socially, spiritually, ethically, and morally degrading and that's just from a human perspective. Dismissing noise impacts on humans is an egregious failure within the Draft EA! Imagine all the veterans who are forced to relive the initial events of their PTSD, each time a war-plane buzzes their Wilderness excursion. Wake Up! Not everyone is turned-on by the unnecessary expenditure of fossil-fuels and U.S. tax payer dollars. People visit Wildernesses every day of the week. People often go into Wilderness to be alone! Where else is a person supposed to seek a respite from modern technology! We may have no control over UAPs, but We can control Our Own flight patterns.

These activities are known to inhibit or detriment biological functions and essential ecological activities provided by wildlife, among all forms of Life. Wilderness is wildlife! Stop disrupting Natural Order for militaristic frivolities! Is nothing sacred!

--The "No Action" alternative is clearly the best choice for Our Wilderness!

--If the review of this proposal is to continue, a full environmental impact statement(EIS) must be conducted! All impacts must be identified and properly analyzed, especially as it pertains to Our designated Wilderness.

--Redraw the boundaries of all existing MOAs and ATCAAs! Help eliminate all overlap with Our Wildernesses quality lands and waters.

Thank you.

Sincerely,  
Andrew Ashburn

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Hello,

My comments on your proposal to expand training and practice flights in the Methow Valley and Okanogan County are as follows.

1. Welcome. I personally enjoy seeing your presence and am never disturbed by the short duration of your sounds of freedom.
2. I oftentimes have deer grazing in my alfalfa fields when you fly over. Seldom do they ever lift their heads. My dog and chickens don't even flinch. I see virtually no environmental impact from your operations around my home.
3. I spend a fair amount of time high up in the mountains. I have never seen a stampede of wildlife fleeing from a flyover. I have never witnessed avalanches, trees toppling over, or wildflowers wilting from a flyover. Again really no environmental impact from the short duration of a flyover. I do get a thrill looking down on one of our excellent pilots maneuvering through a canyon.
4. I feel the benefits of the training and practice opportunities for our pilots outweigh any small impacts that we as a community may experience from a flyover. The duration of any noises is very short. Even if you double what training is currently in place I feel that the frequency would have little impact on our daily lives.

Thank you,

To: <[nafac-nw-NEPA@usnavy.mil](mailto:nafac-nw-NEPA@usnavy.mil)>

I would like to see no action taken until the EIS is finished. At this time we have closed a lot of public recreation areas for mule deer restoration. I cannot think that animals and humans would not be affected by the training missions.

Thank you,

Laurie Meyers  
Winthrop, Washington

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

To whom it may concern:

I am writing in opposition of the planned expansion of the naval airspace into Mazama and the Pasayten Wilderness. Even though the impact report says it will have negligible effects on endangered species and air quality, I have seen firsthand how terrified animals become when jets fly over Winthrop. I have seen deer flee and cross the road into oncoming traffic. I have even seen my own dog hide underneath the bed when she hears it from within our own home.

Expanding the area into a wilderness zone directly negates the purpose of wilderness... you will change the way it feels to both endemic species and the people who visit it.

It's such a small expansion to add that portion of land, but it will forever change the landscape and the way people feel in the wilderness. Please keep the airspace as is.

Dear,

Dear Members of the U.S. Navy,

I am writing to express my deep concern regarding the proposed creation of new military airspaces in Washington State and their potential impact on the Pasayten and Lake Chelan-Sawtooth Wildernesses.

The Draft Environmental Assessment for the Eastern Washington Airspace Extension has highlighted the significant threat posed to these pristine wilderness areas. The proposed airspaces, with their accompanying jet noise and disruption, stand to undermine the solitude and serenity that define these natural landscapes.

I understand the importance of providing our Navy pilots with adequate training, but it is crucial that we do so in a manner that does not compromise our nation's environmental heritage. The dismissal of potential impacts on wildlife and visitors in the draft EA fails to recognize the delicate balance between human activity and the natural world.

I urge you to carefully consider the implications of this decision and to prioritize the protection of these invaluable wilderness areas. By opting for the No Action Alternative, we can ensure that the Pasayten and Lake Chelan-Sawtooth Wildernesses remain unspoiled for future generations to enjoy.

Thank you for your attention to this matter.

Sincerely,  
Rolf Best  
50 Wheeler Ave  
Salem, NH 03079

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear,

Dear U.S. Navy personnel,

I want to express my concerns about the proposed Eastern Washington Airspace Extension.

The Draft EA falls short in assessing impacts on Wilderness. Wilderness values like solitude and quiet, crucially protected by Congress, are overlooked. Jet noise might not cause physical harm, but it disrupts the cherished solitude that Wilderness offers.

Downplaying noise impacts on human visitors during weekdays is inadequate. It assumes people only visit on weekends, neglecting those who seek solitude midweek. Remember, Wilderness is not just for us; it's for wildlife too. Military aircraft sounds disrupt their behavior and cause undue stress. Let's be mindful and give them some peace!

Opting for the No Action Alternative in this Draft EA is the wisest choice.

If the project proceeds, a comprehensive environmental impact statement (EIS) is essential. We need a thorough analysis of all proposal impacts, especially on designated Wilderness.

Let's redraw the boundaries of existing MOAs and ATCAAs to eliminate overlaps with designated Wildernesses.

Thank you for your consideration.

Sincerely,  
Ken Kurtz

Good afternoon!

I'm writing to provide citizen input regarding the Navy's proposed expansion of the air training area over eastern Washington for EA-18 aircraft.

First of all, I would like to thank and salute the aircrews who perform this dangerous but essential mission on behalf of our national security. Their skills, courage, and commitment are unmatched. We are all in your debt for what you do.

Second, I recognize that this terrain is the perfect training ground for what you do. You must "train the way you fight". The Navy has recognized this for a very long time. Long decades of experience have shown this to be the ideal training corridor for the EA-18's and the EA-6's that went before. I have heard objections from some of my neighbors. First, this training was happening long before they arrived. If they didn't like the noise, they shouldn't have moved here. Second, their attitude is the ultimate "NIMBY, "Not In My Back Yard". They recognize that the training is essential, but want it done "somewhere else" so "someone else" will have to put up with the noise. That is unforgivably selfish and un-American. These aviators are protecting our lives, property, and way of life. Occasional exposure to the "sound of freedom" is a small inconvenience for us civilians who benefit from their combat readiness.

With great respect,

Harry G. Cramer III

Dear,

Dear U.S. Navy personnel,

Concerning the Draft EA for the proposed Eastern Washington Airspace Extension, the No Action Alternative is the best choice in this Draft EA. Solitude and quiet are protected by Congress, but are not analyzed. Jet noise will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence and stress stress.

Try making the current testing area work.

Sincerely,  
Sherman Lewis

Dear,

Re: Draft EA for proposed Eastern Washington Airspace Extension

I am totally opposed to the proposed expansion of Naval training into wilderness areas. I've been on family outings where jets have screamed up canyons and overhead totally shattering the peace and quiet. At home while vacuuming the car, with headphones on and my head buried in the trunk with a noisy vacuum next to me, I could still tell there was a military helicopter flying overhead! Military aircraft is NOISY and impact protected areas beyond training borders. We've given our military tens of thousands of acres in which to train. I'm not convinced that more is needed, especially at such a high cost to our precious wilderness places.

Sincerely,  
T. Wilkins

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness and the intent of its protection. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. "Noise" is not a resource (as stated in the EA), silence is the resource. Except at an airfield, average hourly jet noise is utterly irrelevant. Rather, it is the sound during overpass incidents. I've hiked where fighter jets were high up in the clouds (in Gila Wilderness, as I recollect), and while noticeable, it was acceptable to us. I've also had fighter jets come roaring low over the ground (at Organ Pipe National Monument). That was earsplitting, shattering our wilderness experience and doing who knows what to wildlife like desert bighorns. It is also awful PR for the Navy.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is plain silly. We hike and camp mostly on weekdays, partly for the solitude, but mostly because we are hiking in for more than a 2-day weekend. Just assume that hikers will be in there, especially during the summer months.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. Repeated but infrequent loud sounds from at least low-flying military aircraft will certainly disrupt their behavior and cause unneeded stress. Again, I'd expect that aircraft up high in the clouds would have much less affect, whereas low passes will be harmful. After all, helicopters are flown low to herd animals, or rather, make them run out of fear.

2. I would prefer the No Action Alternative as the best choice among the three offered in this Draft EA. An alternative that sought to bar loud startling sound during overpasses, perhaps by keeping jets flying high over these two wilderness areas, would be more palatable to me in keeping with wilderness objectives.

Thank you.

Sincerely,  
Jim Cane

Dear,

Dear U.S. Navy personnel,

As a biologist, I am deeply concerned about the Draft EA for the proposed Eastern Washington Airspace Extension. I have had experiences with extreme noise in Wilderness, and your draft EA does not properly consider the impacts.

Unless you conduct a full EIS you have not given proper considerations to the extreme impacts that jet noise has on wildlife and people recreating in the wilderness. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wilderness.

The No Action Alternative is the only correct choice in this Draft EA.

Sincerely,

Dear,

Dear U.S. Navy personnel,

I have hiked, camped, and enjoyed the Pasayten Wilderness on week days. Restricting flights to Monday-Friday makes NO sense!!

Jet noise on a Wednesday could/would certainly ruin my desire to experience quiet and solitude!

Wilderness is also for wildlife. I have encountered pikas and seen tracks of deer and cougar in the Pasayten. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress.

If this project moves forward, a full environmental impact statement (EIS) must be conducted to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

Thank you.

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear,

Dear U.S. Navy,

Your Draft Environmental Assessment (EA) for the Eastern Washington Airspace Extension would create two new military operations airspaces that would overlap two Wildernesses—the Pasayten and Lake Chelan-Sawtooth Wildernesses—and threaten to startle wildlife and destroy the solitude and silence in both Wildernesses.

The Draft EA inadequately analyzes these impacts to the Wildernesses. For example, the Draft EA dismisses noise impacts by saying flights would run Monday through Friday when most human visitors are not there. This logic suggests Wilderness designation only provides part-time protection, and only for humans, not wildlife. The Draft EA dismisses noise impacts on wildlife because of “short duration and infrequency of exposure.” Yet research shows the sudden and unexpected encounters have the greatest impact on many wildlife species.

While the jet noise may not be loud enough, or last long enough, to cause human hearing loss on the ground — what the draft EA analyzed — the jet noise would still shatter solitude and silence, attributes identified by Congress to be protected in designated Wilderness. While I understand the need for Navy pilots to be adequately trained, we shouldn’t have to sacrifice our wilderness heritage to do so.

The No Action Alternative in the draft EA is preferable to both action Alternatives. Alternative 1 (the Preferred Alternative) and Alternative 2 both propose the creation of the airspaces that would overlap the Wildernesses. Alternative 2 would also consider an increase in the capacity of jet fighter training.

Please only choose the No Action Alternative, to preserve the sanity and health of humans and wildlife in these Wilderness areas.

Sincerely,  
Ann Thryft  
15520 Big Basin Way  
Boulder Creek, CA 95006

Dear,

Dear U.S. Navy personnel,

save earth

Unfortunately, the Draft EA inadequately analyzes impacts to the Wildernesses. For example, the Draft EA dismisses noise impacts by saying flights would run Monday through Friday when most human visitors are not there. This logic suggests Wilderness designation only provides part-time protection, and it also sets up the ironic situation where those who visit during the week—oftentimes to avoid crowds or the sights and sounds of other visitors—are going to bear the brunt of impacts from overflights.

Similarly, the Draft EA dismisses noise impacts on wildlife because of “short duration and infrequency of exposure.” Yet research shows it’s the sudden and unexpected encounters that have the greatest impact on many wildlife species.

While the jet noise may not be loud enough, or of long enough duration, to cause human hearing loss on the ground, which is what the draft EA analyzed, the jet noise would still shatter solitude and silence—attributes identified by Congress to be protected in designated Wilderness. While we understand the need for Navy pilots to be adequately trained, we shouldn’t have to sacrifice our wilderness heritage to do so.

The No Action Alternative in the draft EA is preferable to both action Alternatives. Alternative 1 (the Preferred Alternative) and Alternative 2 both propose the creation of the airspaces that would overlap the Wildernesses. Alternative 2 would also consider an increase in the capacity of jet fighter training.

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

I currently live near a military base, and I see and experience first hand the detrimental impact of aircraft over our property on wildlife as well as on our neighborhood. It is stressful on all, and there is way more than noise pollution happening. The vibrations when they fly over ahead panics the horses, cows, and other wildlife.

We are losing the balance and peace of the planet. Common sense shows that disruption creates more disruption. War and war practices only create more war. It is all fear based. If we want to restore peace, we must have the courage to change and cultivate peace. We r fostering a false premise and an illusion of “protection” with our military practices. Science clearly states that like attracts like.

The government has to know this common sense.

The military and the incredible people in the military are intelligent, brave, caring and resilient. We must be willing to shift our practices, and the military is the place to begin this courageous act for true safety and peace on the planet.

Protecting these wildernesses, and not expanding these naval operations is the right thing to do, even if it goes against the norm.

To say that there is minimal impact is obviously not true. Accountability takes integrity and courage, and we can begin my realizing that nature is our greatest ally and we shouldn’t destroy it with our practices.

Please leave a legacy of peace and true prosperity for our lands and people.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

To the Navy:

My voice joins countless others in taking “No Action” on this proposal until a full Environmental Impact Statement (EIS) is completed under the guidelines of the National Environmental Policy Act (NEPA) for this latest airspace extension request for the Navy’s EA-18G Growlers to train over more of northeast Washington.

Please follow the law and its obligation to a current federal court order to examine El Centro as an alternative training facility prior to allowing any expansion of new airspace in northeastern Washington state (that would be identified as the Okanogan D Military Operations Area (MOA) and the overlying Mazama Air Traffic Control Assigned Airspace (ATCAA).

The noise from Growlers is hurtful and harmful.

Whidbey Island and its habitat, people and visitors suffer from it. the OLF is outdated for the needs of training the Growlers.

Likewise, The Methow is a peaceful natural area whose economy relies on tourism. The presence of the Growlers is already heard there. It deserves to be a preserve of quiet and peace.

El Centro has been suggested as an alternative training area.

Sincerely,  
Kristi O'Donnell  
Greenbank WA  
Whidbey Island

To whom it may concern,

I am advocating the Navy to demand “No Action” on this latest airspace extension request for the Navy’s EA-18G Growlers to train over more of northeast Washington until a full Environmental Impact Statement (EIS) is completed under the guidelines of the National Environmental Policy Act (NEPA) for this. NEPA is a law that requires federal agencies to assess the environmental effects of their proposed actions and to provide opportunities for public review and comment. This process provides legal and Congressional accountability to the public, whereas an Environmental Assessment (EA) does not.

The FAA has the final approval for any airspace changes to military aircraft (MOA’s). The FAA should not approve any airspace changes without first requiring the Navy to follow the law and its obligation to a current federal court order to examine El Centro as an alternative training facility prior to allowing any expansion of new airspace in northeastern Washington state (that would be identified as the Okanogan D Military Operations Area (MOA) and the overlying Mazama Air Traffic Control Assigned Airspace (ATCAA).

Hi,

I am a Methow resident and fully disapprove of the extension of training jets over the Methow. As cool as the Navy Growler Jets are...the Methow is one of the very few places of peace and quiet, the mountains barrier the valley. People who come to the Methow are here to find silence. Allowing the growler jets to train is I am sure beautiful for the pilots...but causes hell for the residents. It is extremely loud and echoes for miles and feels as if war has broken out. Please train with jets in areas that have excessive noise already, not places that are quiet and a place of peace.

Thanks for all your service!!

Caryn

- I urge a complete EIS for the proposed airspace extension, not an internal Navy assessment (EA) which requires no accountability to the communities impacted.
- During the past 10 years, the Navy has consistently rejected the “No Action” alternative decisions on proposals to the public. I request adopting a “No Action” alternative until an EIS is completed.
- The Methow Valley relies on tourism as an economic driver. Increased jet noise may have significant economic, environmental, and community health implications for the Methow Valley. An EIS must take account of jet training on those sectors.

**Subject:** [Non-DoD Source] Public Comment Against Proposed Expansion of Military Overflights in Methow Valley

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

To Whom It May Concern,

I am writing to express my strong opposition to the proposed expansion of military overflights in the Methow Valley by the US Navy. As a resident of the Methow Valley, the prospect of increased military activity poses a significant threat to the quality of life and the natural beauty that defines this region.

The current overflights already impact the tranquility and peace that many of us seek in this area. Having witnessed the constant military overflights at Deception Pass, my concerns are not unfounded. The noise pollution, environmental degradation, and disturbance to wildlife are palpable and distressing. The proposed expansion threatens to exacerbate these issues, potentially transforming the Methow Valley into a less hospitable and unlivable area.

The environmental impact of the proposed expansion cannot be understated. Increased noise pollution is known to adversely affect wildlife, particularly in sensitive areas such as the proposed expansion zones. These areas are home to diverse biological ecosystems that could be irrevocably harmed by the increased military presence. Furthermore, the aesthetic degradation of these wilderness areas undermines their value for recreation and tourism—a vital economic driver for the local community.

The socio-economic implications of the proposal are also of great concern. The Methow Valley's economy, heavily reliant on tourism, stands to suffer as potential visitors may seek more peaceful and undisturbed destinations. This could lead to a decline in local businesses and economic hardship for residents whose livelihoods depend on tourism.

Public health and safety are also at stake. The increased noise from overflights can lead to significant stress, sleep disturbance, and other health issues for residents and visitors alike. It is imperative that the Navy takes these concerns seriously and implements stringent measures to mitigate the impact on the Methow Valley's inhabitants.

Transparency and monitoring of the overflights are crucial. The community deserves clarity on how flight elevations and noise limits will be adhered to and monitored over time. Without this transparency, trust between the Navy and the community will be eroded.

In conclusion, while I understand the need for military training exercises, the Methow Valley should not be compromised in the process. I urge the Navy to reconsider the proposed expansion and explore alternative methods or locations that minimize environmental, social, and health impacts.

Thank you for considering my comment.

Sincerely,  
Raechel Youngberg

I am writing in strong opposition to an expanded training area in and around the Methow Valley, Washington. The military jet noise within our mountain valleys is already a huge disruption to our community. I live on the valley floor, and there are many times throughout the year in which all windows are closed in my home office and my phone or video conference meetings are still disrupted by low-flying military jets. We literally need to stop conversations until the jet noise is finally abated.

The impacts to sensitive wildlife species are yet unstudied and unknown, but our human experience of the jet noise at current levels is intolerable, Impacts to wildlife such as the threatened Canada lynx and soon to be federally listed wolverine must be in consideration. This mountain area is surrounded by designated wilderness, and military training within these landscapes is counter to the objectives of these protected lands and habitats.

Thank you for your consideration.

To whom it may concern

Regarding: Comment on extension of flight training area above the Methow Valley

You are proposing to extend the training area west to Mazama and the east slopes of the Cascades. Given that you have been flying here for decades, we suggest to give the residents of Winthrop and Twisp the long-deserved break and start using other areas INSTEAD of the existing one (not expanding it).

The altitudes you list do not reflect reality, as the jets are often so low that we can see the pilots. The extreme damage done to residents, pets and wildlife cannot be quantified; that kind of rocket noise shakes every living being to the core. There is significant impact noticeable to children's health and safety (if you don't get your fingers into the ears quickly enough, your ears get damaged), public health and safety (potential crashes, unbearable noise, fuel pollution etc) as well as air quality. Environmental justice is not in place when the impact from the flight training is born by one small community for decades and decades, together with the health and safety risk. I challenge any of the persons making these decisions to spend a day in Winthrop when the jets are flying - my guess is you would understand the immense negative impact this has on our valley, while we try to live and enjoy life. We depend on tourism to make ends meet, and no tourist wants to hike or cycle with their fingers in their ears, and masks to avoid breathing in jet fuel.

Flight training should be done in areas with no inhabitants, and outside of areas that rely on tourism to survive.

The environmental impact is significant, and the training benefits do not warrant accepting this damage. Again, please move to an uninhabited area where the affect on residents is minimized. We have be dealing with this for way too long.

Regards  
Dr. Biggi

Hello,

My name is Craig Edwards, I live near Carlton WA in the Methow Valley. Thank you for considering my comments. I am subjected to the noise and disruption of these Navy Growler training flights at home and around the valley. The noise of the low level flights is terrible. What of the wildlife? There have been a number of times these low level flights have passed over me while driving on the local highway at highway speeds. Each time it has surprised and scared me so much I am lucky I did not have an auto accident.

There is no alternative I can support. If it were up to me I would ban all training flights in Eastern Washington period.

The Navy has been disrupting this area with these training flights for decades. It is time you take these flights elsewhere. How about high altitude flights over north central Washington to train in S.E. Washington east of the Columbia River, into Idaho and Montana. All of the patriots in these areas might even enjoy the noise.

I am absolutely against any westward expansion of the flight training area, leave wilderness areas alone.

I am also completely against any increase in the number of training flights from what you already subject us and the wildlife to.

There needs to be an EIS prepared for this plan. "No significant Impacts" just does not cut it for "Potential Impacts". This is a big country, look into some other areas to use.

Thank you

Craig Edwards

Carlton WA

**Subject: Growler training in the Okanogan Co and Washington state**

Thank you for this opportunity to comment on the Navy's proposed expansion of over flights in Eastern Washington, the Methow Valley and North Cascades.

This is a very sensitive issue with the residents of the Methow Valley and the general population in all areas affected by the Military's flight training and routes. Ensuring the Public's opportunity to insist on accountability regarding the impacts and consequences of the present level of over flights and any proposed expansion of over flights is critical.

The proposed expansion of over flights in the Methow Valley and North Cascades brings an over burden to the residents, visitors to the area and the wildlife. From the Valleys to the surrounding Mountains and lands every living creature is affected along the training path of the jets from take off, to the flight it self, to the landing.

Consideration of all Life affected by these over flights is not inadequately analyzed, documented, or addressed in the Navy's Environmental Assessment (EA).

Our community is dependent on recreation and tourism and the over flights are incongruous with the natural surroundings of the these small communities and the wild lands that surround us.

We also have a number of sensitive and listed wildlife species that are surely impacted and disrupted by the noise levels and the unexpected fright of the presence of the Growler traffic.

We are challenged by the noise day and night. Many nights I am awakened by the drone of the jets. I have been frightened many days by the sudden a-front of the sight and following sound. Often needing to protect my ears from the roar from the force of the jets. My Livestock are also affected by these over flights. Some of the jets are so low I believe that I can see the pilot. And the obnoxious practice of the pilots flying straight up into the air, seemingly hovering for many seconds in one place is the most intrusive, polluting and damaging as there is no escape from this disregard for the folk below them.

From my home I hear no other human noises of any kind. When the Military jets fly over I realize how it must be for the peoples in war torn countries where the bombers are over you before you can even hear then coming...it is frightening!

I am impacted by todays levels and number of flights and am opposed to any additional expansion of flights. It is unfair to our Community and to the Wildlife that also endure the surprise attack of the sight and sound of these intrusive jets.

I recognize the Military's thinking of preparedness and training. I wish we were spending as much money on Peace efforts as we are spending on Military jets and the associated impacts!

The EA does not address the Significant Impacts to the environment, to the health of the public, socioeconomics, air quality, wildlife, and the will of the People affected by the over flights.

An Environmental Impact Statement (EIS) must be required to more thoroughly address the real impact and concerns of the present and future expansion of Growler training.

For the Military to summarize that there will be no significant Impacts for any of the alternatives put forth in the inadequate EA is a blatant disregard for those who are genuinely impacted by the significant and persistent disruptions these over flights present.

Thank you for your time and careful and thorough consideration.

Sincerely,  
Kathleen Yockey  
Carlton, WA

Naval Facilities Engineering Command:

Thank you for the opportunity to review the *Draft Eastern Washington Airspace Extension EA* dated January 2024. Our comment consists of taking exception to the use of Day-Night Average Sound Levels (DNLs) to calculate impacts on persons, communities, and wildlife. Because the Navy restricts training flights to daylight hours only, use of DNLs artificially lowers the calculated sound levels via the mathematics of averaging a period of high sound levels with a significant period of no sound levels. We believe that the EA should be revised to analyze all impacts using maximum noise exposure levels.

Sincerely,

The airspace around Colville National Forest has among the lowest commercial air traffic in the US. I have researched flight radar for years seeking an area to live with the least aviation noise pollution, and so whenever one of these lower traffic areas is in the news it comes to my attention.

With that said, the noise impacts over an area with already enormously less civilian air traffic, will be more severe and more noticeable. Loudness, of course, is relative to the existing background noise. Most wilderness areas have a blanket of rumble and aerodynamic low-frequency far-reaching noise from almost constant civilian air traffic and so the background noise is higher in those already heavily noise polluted areas, making the loudness lower in those majority areas and louder in minority areas like Coville with enormously less of this background noise. This can only be properly scientifically assessed using unweighted decibel units in order to capture the entirety of the low-frequency sound energy, as those are the frequencies that travel so far and make it down to the ground-level from commercial flights.

There is a rapidly growing population who are noise sensitive and nothing is being done in terms of airspace sensory-friendly airspace regulation, quite the opposite actually. If there is any doubt of my claim, consider 1) Walmart daily sensory-friendly hours 2) Annoyance of 65dBA aviation noise jumped from 12.9% in 1992 to near 70% in 2021.

(screenshot attached, Page 29 <https://www.gao.gov/assets/gao-21-103933.pdf>)

It's unrealistic to expect more sensitive populations to wear ear protection when going through their daily lives (as opposed to going to a noisy venue, which would be unlikely of them in the first place--with aviation the noisy venue is brought to them), and also limiting. For one, ear protection does relatively little against the sub-100Hz acoustic energy and vibration that is characteristic of aviation noise. The noise and vibration is easily unbearable and potentially symptomatic even with them on. Foam earplugs, which provide the most protection against lower-frequencies, are very uncomfortable, and there can be issues with prolonged usage. The highest rated earmuffs have very tight clamping pressure which quickly becomes uncomfortable. These comfort effects vary with each individual anatomy, as well as the level of protection. While these options have relatively limited ability to attenuate low-frequencies, I've found noise-cancelling headphones, to provide the least attenuation for this kind of noise.

The very low-frequency noise is basically impossible to soundproof except for commercial aircraft at cruising altitudes even with advanced, extremely expensive techniques. An acoustic company proposed an \$80,000+ bedroom soundproofing treatment that included a room-within-a-room, but said that even with this setup the propeller planes can still be audible from miles away--which speaks volumes about how difficult it is to block very-low-frequency aviation noise. Likely similar with many military aircraft noises whether propeller or not, because how low they fly and/or how powerful they are.

The solution would be to create areas without aviation noise, or at least areas that only allow commercial aircraft at cruising altitudes, since the others can't be soundproofed against. In this particular case, a solution would be to

financially support and help relocate those who would be affected by the noise, or if sound reduction renovations would suffice for them to cover that.

Finally, a shortcoming in these environmental reports is not thoroughly assessing the effects of the sub-125Hz frequencies and their effects on all parts of the ear including the vestibule. This includes the noise and vibrations. Although very scarcely researched, existing studies\* suggest the vestibule of the ear is more sensitive to low-frequency noise, low-frequency noise can cause vestibule damage, and imbalance (and likely other vestibular symptoms). The studies below aren't even below 100Hz sound frequency where I suspect the sensitivity and potential for vestibule damage is even greater if tested with a commonly encountered vibrational noise source such as aircraft. Given the high degree of acoustic energy below 100Hz from aviation noise, a thorough environmental report cannot be done without thoroughly studying this topic.

\* Example studies on low-frequency noise effects on ear vestibule

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

**COMMENTS on the proposed Eastern Washington Airspace Extension Draft Environmental Assessment**

**February 23, 2024**

**copies sent separately to Senators Murray and Cantwell, Representative Newhouse**

Thank you for the opportunity to comment on the proposed Eastern Washington Airspace Extension. I am a Methow Valley resident since 2000, living in Mazama, WA -- located below the proposed Mazama ATCAA/Okanogan D MOA. While I appreciate the Navy's need for training grounds and military readiness, I have many concerns about the proposed Extension. I attended the online public meeting on 2/15/24 and have read the Environmental Assessment to prepare the comments below.

Personally, I have been affected by the noise impacts of Navy jets flying in the area. One particularly jarring and loud incident occurred when I was floating the river on a peaceful summer day between Winthrop and Twisp when one or two jets flew directly overhead at an extremely low level. Presumably this flight activity is allowed in Okanogan MOA section B (300' AGL). But this type of training is absolutely unacceptable in the populated Winthrop/Twisp corridor of the Methow Valley, where the sound reverberates off the hills and mountains that define the valley and has a significant impact.

So I cannot support the Navy introducing flight noise in the proposed 'new' area, in addition to the existing MOAs and other established flight areas such as IR-438. We are already frequently subjected to noise effects, sometimes extremely loud, throughout the valley and further to the east. The proposed MOA D overlays valued, pristine and relatively quiet high mountainous zone that is very popular for outdoor recreation and home to important signature species such as mountain goat and wolverine.

For these and further reasons detailed below, I support a NO ACTION alternative and request the Navy complete a full EIS, including an analysis of more alternatives including relocating some of its Growler jet training to other locations in the U.S. Having 100% of these aircraft conducting training in Washington state, from the coast to the Idaho border, has a very high impact and is an unfair burden on our region.

**My specific comments on the Eastern Washington Airspace Extension Draft Environmental Assessment are:**

**1. Map lacks detailed information**

The map of the proposed the Environmental Assessment is very vague and lacks sufficient detail. It is impossible to know from the Navy what's below the proposed Mazama ATCAA/Okanogan D MOA. This area is highly popular for recreationalists including visitors driving the North Cascades Highway, to the Methow Valley, as well as campers, hikers,

skiers, climbers, snowmobilers, horseback riders and boaters on Ross Lake. Our region attracts visitors from all over the world for its beauty, access to relatively pristine wilderness and recreational opportunities. The map does not show, for example:

- Notable peaks and their elevations
- Trails, such as the Pacific Crest Trail, and highly popular Maple Pass, Rainy Pass, Cutthroat Pass and Blue Lake trails
- National parks, wilderness and designated federal recreation areas
- For example, does Ross Lake lie under the proposed flight area?
- Location of North Cascade Highway over Washington Pass

The places underlying the proposed extension area will undoubtedly be impacted by noise and detailed mapping information is necessary for the public to fully understand the impacts of the proposal. For instance, by my understanding, a jet could fly at 11,500' and a hiker or climber could be near or on top of an 8,000' peak and experience the noise impact of the jet just a few thousand feet above. The EA provided latitude longitude coordinates but these do not give a visual understanding of the proposal at all. Many people who visit and live here are very active in the mountains underlying the proposed flight zone and they have intimate knowledge of the area, so more detail of the landscape's features relative to the Navy's operations need to be included.

—

## 2. How will the Eastern Washington Extension be used?

The EA lacks detail on how the extension area will actually be used for training. One would assume that the jets already transit through this area to access existing MOAs to the east. So I would like to understand what are the expected operational differences and noise impacts of training versus transit under the proposal.

For example, just today (2/23/24 at 10:35 a.m.), jets were above Mazama, creating a sustained noise impact (roughly recorded at average 70dbA, max 85dbA). I assume this jet(s) was in transit; how will training in the proposed MOA D differ and what will be the impacts?

—

## 3. Impacts from Noise and Noise Analysis

The EA noise analysis relies on OSHA workplace noise standards that are irrelevant and meaningless to the actual on-the-ground situation in a relatively natural and quiet environment like the Methow Valley and surrounding mountains. The EA does not give any quantitative or qualitative substance to the real effects of Growler noise (on people, wildlife, stock animals) when heard in a usually quiet place. Additionally, the EA relies on a day-night 24-hour average decibel for its modeling, a standard that doesn't capture the impact of sudden, instantaneous and disturbing noise such as I have experienced. Furthermore, the Navy does not intend to monitor, record or measure actual noise and flight data from its training operations that would bring clarity to real impacts. I would like to see the Navy deliver on its intent to be 'good stewards' and revisit the impacts of noise that are realistic to this environment and commit to capturing, documenting and sharing objective, measured data.

## 4. The EA does not address impacts of operations and noise on tourism, the local economy and a growing population

The Methow Valley economy is heavily reliant on tourism. Visitors enjoy the extensive recreational opportunities in a natural landscape. Full and part-time residents choose the Methow Valley for the same reasons and the quality of life here.

Our valley has grown tremendously--- both in population and visitation--particularly in the last 5 years. The Navy's analysis doesn't address the impact of its operations on this increased population base and our robust tourism-based economy.

As I understand, the last time the Navy conducted an in-depth analysis was 2010, in its Northwest Training Range Complex Environmental Impact Statement. Fourteen years has since passed -- a time of significant growth and visitation in our region. It is unclear how and if the Navy considered the noise impacts on the region's increased resident and tourism population in the draft EA. The Valley itself and the surrounding mountains accessible from the North Cascades Highway have become busier and busier with visitors every year.

For example, this Methow Valley News article from 2020 discusses overcrowding, citing 1500 people hiking/732 cars parked in one day at the popular Maple Pass hike (underlying the proposed MOA D/ATCAA) off the North Cascades Highway in the fall of 2020:

<https://methowvalleynews.com/2020/10/28/no-escaping-traffic-in-the-great-outdoors-this-year/>

I have heard that the Forest Service did a count in 2023 count of 2000 hikers in one day at this same location.

The Navy EA (3.6.3.2) states that "visitors to National Forest and wilderness areas on weekends or at night would rarely hear an EA-18G, because training flights typically occur Monday through Friday during daylight hours." This statement and its implication -- that visitation is low or insignificant during the week -- is not supported by any data in the EA on tourism visits, including timing, extent, locations and counts of visitors. Anecdotally, anyone who lives here knows it is busy every day of the week for easily 10 out of 12 months. This is important information to understand the potential impact of the proposal on the tourism-based economy here.

#### **5. Communications -- was the Navy's public notice adequate?**

I spent my career as a communications professional, so I found shortcomings in the Navy's outreach to our community. While the Navy's outreach actions may have met the requirements of the law, it didn't give the public easy access and enough time to attend meetings, study the EA and learn about and understand the complex information in the proposal. I found:

- Links to the actual meetings weren't easily found. I learned of the links just a day before the first meeting from a friend. Many people were unaware of the meetings.
- The EA states (section 1.8) that 'the public in the action area was sent a postcard mailer.' I live in Mazama, which is below the action area and did not receive such a notice in the mail.

- **A physical copy of the EA was not available at the Winthrop Public Library**---the closest library to the proposed extension area and to the residents of Mazama, Lost River, Winthrop who will be most impacted. During the 2/15/24 meeting, I requested the document be sent to the Winthrop Library; as of February 22nd, the library had not received it. Many people in this area cannot rely on nor have internet access or capabilities and the library (and other non-digital outreach such as posters) is important for public notifications such as the Navy's proposal; the Navy missed the mark by not supplying the EA to the Winthrop Library in January immediately after its release.
- 
- **Only one of the two recordings of the public meetings was posted online--but not until February 22nd, just one day before comments were due.** This is inadequate time to allow the public who couldn't attend to listen in, to learn from presentation and the informative questions and answers.
- 
- In the 2/15/24 meeting, Captain Hanks said that the Navy wants to be "good stewards." In my opinion, the Navy missed an opportunity to truly educate, inform and engage our community, which is thoughtfully engaged in issues affecting the valley's character and well-being, including people, land and wildlife. A public, in-person meeting at the Winthrop Barn (capacity 500) would have been very well-attended and would have helped the community efficiently understand the complexities of the Navy's current and future operations under the proposed Extension.

Again, thank you for the opportunity to comment on behalf of me and my family.

Sincerely,

Elizabeth 'Boo' Turner

Hello,

I'm emailing to lodge my opinion in regards to the Navy flying EA-18G Growler jets for training over more of north eastern Washington state. I would like to recommend the Navy take "no action" on this until the ordered environmental impact statement is done.

I would also like to request the Navy examines El Centro for training flights instead of NE Washington.

Thank you,

Dear,

Dear U.S. Navy personnel,

I reside in Eugene, Oregon. As an American and a lover of nature and of the entire northwest, here are my comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you for considering my comments.

Sincerely,  
Charlotte Maloney

It is difficult to overestimate the negative impact jet noise has had on the Methow Valley.

When I first moved to the Methow valley in 2003 it was one of the quietest places I'd ever been. It was an occasion when a military jet flew at low level overhead. Now when I go outside for any length of time I wear headphones. If I'm going to be outside for over 30 mins, I'm going to be blasted by an F18 growler (the loudest aircraft in the US inventory) going full afterburner. The aircraft noise does not last for a few seconds but instead minutes and you simply need to wait a few more minutes for the screaming to return. The jets go full afterburner to the Canadian border turn around and blast back (or so it seems).

The Methow is a rural/recreation area 100s of miles from the nearest airport that has more jet noise than my home had when I lived in the Seattle area.

This proposal appears to be another increase in the Methow valley noise levels. Yes, the first two options don't increase the number of flight. However, option 3, the option the military is pushing for, increases the number of flights to some unspecified number. The proposal also said this won't have a significant impact, this is simply false.

Sincerely  
Rodney Trepess

Naval Facilities Engineering Command:

Thank you for the opportunity to review the *Draft Eastern Washington Airspace Extension EA* dated January 2024. Our comment consists of taking exception to the use of Day-Night Average Sound Levels (DNLs) to calculate impacts on persons, communities, and wildlife. Because the Navy restricts training flights to daylight hours only, use of DNLs artificially lowers the calculated sound levels via the mathematics of averaging a period of high sound levels with a significant period of no sound levels. We believe that the EA should be revised to analyze all impacts using maximum noise exposure levels.

Sincerely,

Sharon E. Buck, MCM, LMT

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Hello,

Please accept my comment on the US Navy's expansion of the Okanogan MOA.

I have been a resident for nearly 50 years in the Wolf Creek area which is in the Okanogan MOA A&B about 2 miles west of Winthrop just below Sun Mnt Lodge on the valley floor. I believe there is a vector for training (Flight Path) over my home because lots of aircraft have used the exact same heading over the years. I am also a licensed pilot, aircraft owner based out of the Methow Valley State Airport and two tour Viet Nam Veteran with several years experience in US Army aviation.

After review of the proposal, I find the documents have provided the information I need TO SUPPORT the expansion as proposed. I realize we need training areas and Eastern Washington with the vairing terrain and less populated rural area provides this.

The only concern I have is with the environmental assessment concerning noise and the BMP. As the draft states the "duration of exposure would be brief seconds." I find this not true. I have experienced considerable longer periods for exposure to noise when various aircraft practice SLOW FLIGHT. I did not see any reference to this in the study. As a pilot I understand this aspect of flight training, but it needs to be over some non populated areas of the MOA's not over the towns of Winthrop and Twisp which generates complaints from residents and I have experienced several when in town getting the mail at the post offices.

Thank you for the opportunity to comment,

Paul E. Christen

To Whom It May Concern,

I am writing in regards to the proposed increase in Growler jet airspace over the Methow Valley in WA state. As a member of the Twisp community in the Methow Valley, the noise created by these jets is of significant concern.

We live in an area with families as well as wildlife. I have witnessed the scattering of mule deer from a hillside as well as flocks of birds alighting as a result of a jet flying overhead. This valley also is adjacent to a National Park.

We frequently hike in the hills above our town and have witnessed the flying of these jets below the peaks we hike to. None of these peaks are above 5000'. The sound of the jets is considerable and alarming.

Noise pollution is known to cause health issues in all ages, to interfere with childhood learning, to impact the wellness of our wildlife and domestic animals.

Please consider the societal and environmental impact of this jet use by completing an EIS prior to proceeding with increased flights over the Methow Valley.

Thank you,

Cynthia Macklin

Twisp, Wa 98856

TWIMC,

I would like to share my thoughts regarding the increased number of flights over Okanogan County and the impact the flights have on our Washington state communities in the operations and flight paths. As a career Teacher and administrator in Washington I believed that our quality of life in Washington was vital to the learning and growth of our students. I believed that their potential was a responsibility for all of us to safeguard and nurture...no matter their career path we all need to strive to provide an optimal learning environment.

Non transparency and disregard for environmental safeguards is not what the US Navy should promote. As a "Navy Brat" and son of career officer Captain, USN, Ret and Pearl Harbor survivor; I believe that another path needs to be followed by our US Navy with this issue.

Thank you for listening/reading.

We firmly disagree with increased growler jet airspace in the Methow valley and over Lopez Island. We live in both spaces and would be adversely affected by the jet noise as well as the negative impact on our water/air fowl. Thank you for your consideration.

Hello,

I'm emailing to file a comment in regards to the the Navy flying EA-18G Growler jets for training over more of NE Washington state. I would like to recommend the Navy take "no action" on this until the ordered environmental impact statement is done.

I would also like to request the Navy examines El Centro for training flights instead of NE Washington.

Thank you,

As a Methow Valley resident, business owner, and pilot, I am writing to object to the expansion of the Okanogan MOAs and the addition of ATCAAs. I would also strongly suggest raising the floor of Okanogan B and Roosevelt B MOAs from 300 AGL to at least 2000 AGL to allow for safe fire fighting training and operations, and allow general aviation to operate safely in that airspace.

It is difficult to imagine that Alternative 1 and 2 have No Significant Impacts on Resources. The noise produced by Growlers knows no bounds. Please select the No Action Alternative, and consider El Centro, CA, for all future Navy Growler training.

Naval Facilities Engineering Command:

Thank you for the opportunity to review the *Draft Eastern Washington Airspace Extension EA* dated January 2024. Our comment consists of taking exception to the use of Day-Night Average Sound Levels (DNLs) to calculate impacts on persons, communities, and wildlife. Because the Navy restricts training flights to daylight hours only, use of DNLs artificially lowers the calculated sound levels via the mathematics of averaging a period of high sound levels with a significant period of no sound levels. We believe that the EA should be revised to analyze all impacts using maximum noise exposure levels.

Sincerely,

Frank S. Shuri, PE, LG, LEG

It is difficult to overestimate the negative impact jet noise has had on the Methow Valley.

When I first moved to the Methow valley in 2003 it was one of the quietest places I'd ever been. It was an occasion when a military jet flew at low level overhead. Now when I go outside for any length of time I wear headphones. If I'm going to be outside for over 30 mins, I'm going to be blasted by an F18 growler (the loudest aircraft in the US inventory) going full afterburner. The aircraft noise does not last for a few seconds but instead minutes and you simply need to wait a few more minutes for the screaming to return. The jets go full afterburner to the Canadian border turn around and blast back (or so it seems).

The Methow is a rural/recreation area 100s of miles from the nearest airport that has more jet noise than my home had when I lived in the Seattle area.

This proposal appears to be another increase in the Methow valley noise levels. Yes, the first two options don't increase the number of flight. However, option 3, the option the military is pushing for, increases the number of flights to some unspecified number. The proposal also said this won't have a significant impact, this is simply false.

Sincerely

However, option 3, the option the military is pushing for, increases the number of flights to some unspecified number. The proposal also said this won't have a significant impact, this is simply false.

The noise has been so extreme at times that I've considered moving from the area.

I served our country in Army aviation both overseas and in the US. I understand the need for training but I don't understand why more of these training flights are not conducted over the Pacific Ocean (which is a few miles from where the aircraft take-off) or on flight simulators. There needs to be a better balance between military training (that could be easily be conducted else where with less impact on the population) and quality of life for citizens in the ever expanding military training area.

Sincerely

Rodney Trepess

To whom it may concern. Please don't increase the number of flights over our valley. I understand the need for training but there has already been a significant increase in flights since I first moved to the methow in 2001, and they have a significant negative impact on the human and animal Populations. We live in the methow because it is quiet and the thunderous roar of the jets is such a frequent occurrence that my husband now wears headphones when he works outside. Our dog runs for cover when he hears the growlers and I have to also wonder about the impact on local wildlife, many of which include endangered species. If we humans are being impacted I can't imagine that other animals, often with more sensitive hearing, are even more impacted.

How much does it cost for just one flight over our idyllic little valley? With AI and other advances in simulation technology in combination with the harmful Impacts on local humans and other animals, doesn't it make more sense to have fewer flights?

In addition, much of our valley's income comes from visitors who are seeking quiet in a beautiful and peaceful place. Without doubt the jets disrupt that peace and if flights increase it will be even worse. My husband and I have been camping in the Catalina Mountains in Arizona and we actually picked up and moved south to Patagonia today because air traffic from jets in the Catalina Mountains ruined our supposedly peaceful and quiet retreat. Unfortunately it will be a much bigger deal if we end up having to move from where we actually live because of the noise. When we set roots in the Methow, hundreds of miles from the nearest naval base, we didn't think for a second that navy jets screaming overhead so frequently would impact our lives to this extent.

I really hope you take these comments seriously.

Sincerely,

Tracey March

**Subject:** [Non-DoD Source] Eastern Washington Airspace Extension Draft EA

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Kristin Vyhnaal

2/23/24

To whom it may concern,  
These are my comments on increased military activity proposed by U.S. Navy in Okanogan County, Washington.

I appreciate the opportunity to comment. I understand the Navy needs places to train pilots. However, as a long time resident of the Methow valley I am extremely concerned about the various impacts this would have on life here in the valley for humans and animals. This would include noise pollution, air pollution, water pollution, increased fire danger and general degradation of life here in the valley.

It doesn't take a Doctorate or team of experts to realize the impacts from the noise the ER-18G Growlers produce, especially when they will be operating as low as 300 feet above the valley floor. The proposal is up to 10pm (after bed time for many, especially senior citizens and children), and after daylight (which comes very early in the summer months). Couple this with the fact that many people here sleep with their windows open at night to take advantage of the cool nights to sleep comfortably and cool their houses down for the next hot summer day and the sleep of many will be disrupted. As a senior citizen with moderately severe back pain I constantly struggle to get enough rest without loud additional noise from Growler jets just overhead just after daylight and into the evening.

This is normally a quiet area and that very attribute is a cherished part of valley life. People live here largely because it is not noisy or congested and there is ready access to the forests, lakes and wild areas, all of which would be negatively impacted by the noise. I would ask if any studies have been conducted on the impact to wildlife and if not, shouldn't this be done? I know that it disturbs me immensely and have seen pretty significant irritation in my mule in the pasture and under saddle when these jets get too close. I have wondered more than once if she was going to stay calm while I'm riding because of the noise from these jets and as a senior citizen I cannot afford to take a bad fall from the mule because she is startled by the incredibly noise.

Since these jets use two F414-GE-400 jet engines and would be operating at such low altitudes I also have concerns about the fuel emissions. This has a very good potential for pollution of pristine areas of air, land and bodies of water both here and in the Pasayten wilderness should the unfortunate choice to operate these jets over the wilderness become reality. I cannot emphasize enough the rude and disrespectful nature of operating these planes over the wilderness, and I object most strenuously to doing so at any time for any reason. Couple these concerns with the fact that the F414-G-400 Growler has a top speed of nearly 1200 mph and the case for allowing them in the Methow valley much less the wilderness grows stronger. As a long time resident I have more than a few times been truly startled when one of these jets passed too low overhead going way too fast and creating a deafening roar that required covering my ears against noise so great it was painful to my ears. They have no legitimate purpose in doing that anywhere there are people at the very least. All pilots do not follow the rules.

This brings up another issue which is how to monitor these pilots and catch offenders to encourage those who might otherwise not follow the rules, to follow the rules. Could the planes be somehow monitored or tracked? This should be strongly considered for obvious reasons.

I am also concerned about the devastating impact a crash could have in this area particularly when everything is dry and the potential for fire activity and rapid fire growth is high. A crash at a bad spot at a bad time could literally cause a wildfire that could destroy many acres of forest, many homes, could very likely take lives if not destroy them by loss of home and property. Perhaps all flights should be suspended over this area after the fire danger reaches a certain level. I believe this should be a condition of operation here because the cost to the area could be so high from a single inevitable incident. Fire is a very real consideration with very real consequences in this area and is an unfortunate reality for us.

I would ask the Navy to strongly consider other areas for training purposes to at the very least take a share of the burden this places (unfairly) on the residents and summertime guests of the valley. There is no reason that this burden cannot or should not be shared by others especially during high fire danger and at night.

I strongly believe it is the responsibility of the Navy to meaningfully consider all impacts on this area. I respectfully request the Navy does an EIS (environmental impact statement) to consider these impacts and others I have not listed here on the citizens, including wild and domestic animals, as well as considering other areas to share the burden of these pilots learning the things they need to learn to operate safely and effectively in service to the country.

Thank you for your consideration of these matters,  
Richard Tingelstad

Thanks for this opportunity to comment on the proposed "MOA Expansion" in Washington State.

**AN EIS FOR THIS PROPOSAL IS NEEDED.**

**There should be an EIS containing at least one additional alternative in a different location. This EIS should include:**

1. Comparative and cumulative impacts of each alternative regarding air traffic, including alternatives in areas that are not so prone to frequent and large wildfires as the area being considered in this EA. This would analyze the impacts of air traffic during wildfire as well as the added impact of year-round of growler jets proposed in this EA.
2. There should be comparative analyses of each location that would have the least disruption upon the disappearing silence that is so treasured by residents of the Methow Valley .
3. The analysis of alternatives would include relative expenditures of fuel by the Navy for each of the currently proposed locations with other locations.
4. Abilities of the navy to continuously monitor the Growler Jet activities under each Alternative should be considered. Already, these jets occasionally wreak havoc in our little, quiet town of Twisp with extremely low and sudden flights, often circling around and coming back again.
5. Each Alternative should consider the routes of jets in transit from Whidbey Island to their training location and back, and the relative impacts of each route.
6. The relative impact of other alternatives in relation to the high susceptibility of the Methow Valley to temperature inversions and thus entrapment of pollutants (particularly PM-2.5) close to the ground. These particulates greatly affect human health and well-being, and the Methow is already inundated each summer due to wildfire.
7. The various alternatives should be compared so as to locate areas where jets would not be breaking the beautiful silence that reigns here in the Methow when there are no wildfires and related air traffic.
8. The Methow Valley is an area to which many have retreated (including Vietnam Vets who are subject to PTSD) in order to get away from human-caused noise and other disruptive experiences. Impacts upon people, pets, and wildlife from noise of these powerful jets will be huge, and areas of less impact should be sought out.
9. Impacts of noise upon health issues for each alternative should include comparisons of these items:

\*Disruption of sleep patterns. Many individuals here are farmers, ranchers, and retire to bed far earlier than 10:PM. Disruption of sleep patterns for any human (and probably animal) is a known safety concern.

\*Impacts of noise upon stress levels: new studies show that stress is a major factor in many, if not all, illnesses. What will be the impact of adding this loudest of all jets to places where humans can now seek solace?

\*Impacts upon silence, a necessity of healthy human life: The area of the Methow Valley was not long ago identified as one of the quietest areas in the country. By expanding this project to include flights and maneuvers over Wilderness areas such as the Sawtooth and Pasayten Wilderness, you will be destroying the ever-more scarce solitude found nationally and likely globally.

10: Disruption of Wilderness Activities, including pack strings with mules, donkeys, and horses in the Sawtooth and Pasayten Wilderness areas. These growler jets can be suddenly loud and shocking. Consider the impact upon a pack string (a large part of our tourism economy) as a growler jet crosses a ridge near them and they are subjected to the sudden, horrific sounds we sometimes hear in populated areas. Imagine the impact upon human riders when these pack animals bolt at a sudden and unexpected sound immediately above them.

\*11. Impacts upon the Methow Valley in particular with each alternative: the Methow Valley is already subjected to much noise from fire-related air traffic during wildfires by helicopters, large retardant planes, and jump planes. This air traffic includes not only the traffic related to wildfire within the Methow Valley, but includes air traffic going and coming from North Cascades Smokejump Base (NCSB) going to and coming from wildfires during fire season in all areas of the state and country.

12. In addition, Okanogan County is a minority population due to 1) low incomes and 2) fewer health benefits than less populated areas 3) and location of the Colville Reservation with many native people in the population. We should not be discriminated against by lack of consideration of already noisy, more populated areas that might fulfill the goals

13: Regarding wildlife: Wildlife, including many protected species, live at high altitudes in the North Cascades where they are more likely to both hear and see low level jet flights, especially in contrast to naturally low background noise. **The EA recognizes the lack of good data on this topic.** It is incumbent on the Navy to develop information on the real potential effects of noise on wildlife. The analysis should address in greater depth noise impacts on our diverse bird species. Of special note are potential implications of this proposal on areas where grizzly bears may be introduced in the near future. **Each Alternative should be compared in this regard.**

14. Finally, consider this: With this increased air space, you continue to target (more and more) the people who have made the pursuit of silence, peace, and quiet a major aspect of their lives for one reason or another. You are targeting them with the loudest jets possible - not only passing overhead but hovering over the area with a huge impact upon those below.

**THE AIR QUALITY ANALYSIS IS FAULTY AND SHOULD BE ADEQUATELY ADDRESSED THROUGH ALL THE ALTERNATIVES:**

**1) The impacts upon air quality other areas with less frequent inversions must be considered.**

**2) The overall analysis of Air Quality is faulty and cursory.** For example: Look at AQ: p. 3-9-10. Does not differentiate between PM-10 and PM 2.5 on chart. What is the limit in tons for each?

## **ENFORCEMENT**

Enforcement: Already these jets fly suddenly and unbearably close to the ground over the Town of Twisp. It just can't be legal. Who will enforce the regulations? Local people complain in letters to the editor and some even write representatives in Congress. But where is the enforcement? Enforcement likelihood (in comparison within the various proposals) should be included in an EIS. Continuous monitoring is needed. Will it be done? If so, which area is more likely to have enforcement?

Each alternative should be compared in this regard - in relation to whether enforcement is more or less likely in certain locations.

## **MY BOTTOM LINE:**

Under no circumstances should jets be allowed to do their maneuvers or fly over any Wilderness Area. In this case, it means the Pasayten Wilderness and the Sawtooth Wilderness - and/or wilderness-like areas of the North Cascades National Park.

This proposal is not in accordance with the intent of the Wilderness Act. Both people and wildlife need some place to go where silence reigns.

**Sincerely yours,  
Isabelle Spohn**

**Subject:** [Non-DoD Source] Eastern Washington Airspace Extension Draft EA

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear,

To U.S Navy, who it may concern,

I am an active user (trail runner, hiker, hunter, fishermen, etc) of the Pasayten and Lake-Chelan-Sawtooth Wilderness areas, and I would like to share my concerns on the Draft EA for the proposed Eastern Washington Airspace Extension.

This expansion would directly and negatively impact my enjoyment of these wilderness areas. Only allowing jets to fly during the week does not adequately address this issue, as myself and many others recreate on these public lands throughout the entire week. Solitude and freedom from human involvement are some of the core tenants of the wilderness act, and this airspace expansion will be putting that at risk.

In addition I am concerned about the impacts on wildlife, and how this could negatively impact their movement patterns along with habitat utilization throughout these wilderness areas.

The anthropogenic world of today already has a deep and wide ranging reach. Wilderness areas are some of the last strongholds where both humans and wildlife can exist away from traffic, industrialization, commercialization, and noise and sound pollution.

I am a supporter of our armed forces, and understand the need for airspace that provides training to pilots. However I offer that this airspace is not a necessity for naval airspace, as pilots have been successfully trained for decades in airspace that already exists. I urge the Navy to take no action on this proposal, and demonstrate your knowledge and care in the fact that Wilderness Area's are an important American ideal, which deserves to be protected for the enjoyment of the public for generations to come.

In addition I offer the following comments:

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you for taking the time to read my comment!

Austin Boese  
Wenatchee, WA

**Subject:** [Non-DoD Source] NO ACTION!

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

I am writing to request that the Navy has no action over the Methow Valley until a full environmental impact study has been completed. We who live in the valley strive hard to preserve our natural wildlife in many different regions with many restrictions, including closing certain trails, at specific times of the year, in order to not disrupt their habitat. The impact of the noise pollution provided by the increased navy training will significantly affect the wildlife in our community. This is just one example of the negative impact of increasing the navy flying Over the methow valley. Children will be disrupted by noise during the school day, the impact of fuel harming the environment and many other possible negative impacts. Please take our nature and health into consideration with a full study before you increase flying over our beautiful lands.

Kind regards, Lori Surges

**Subject:** [Non-DoD Source] Comments on Eastern Washington Airspace Extension EA

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

To Whom It May Concern,

I am a resident of the Methow Valley and I am writing to you with my comments regarding the proposed airspace extension noted in the subject line above.

I read the Environmental Assessment (EA) document and I here provide my comments below.

1. Based on the airspace currently available to the Electronic Warfare (EW) aircraft community (EA-18G Growler squadrons) based at NAS Whidbey Island (NASWI), and considering the minor change to altitudes in the Molson South High ATCAA mentioned in the EA, it is implausible that NASWI-based squadrons will be constrained for aircrew fleet readiness training.

The Northwest Training Range Complex (NWTRC) used for this purpose covers most of the northern half of the entire state of Washington in MOA, ATCAA, and special use airspace and includes extensive airspace offshore (PNW EW Range Airspace), multiple low level navigation routes, the Boardman MOA and target range in Oregon, the Darrington Operating Area, and additional resources as noted in the NWTRC User's Manual. This airspace has been adequate when a larger contingent of aircrew and more aircraft were deployed to NASWI (multiple EA-6B Prowler and A-6E Intruder squadrons) in prior years. As noted in the EA document:

"The type and number of sorties within the airspace has remained the same following the transition from the EA-6B to the EA-18G."

If the current EW community cannot adequately schedule the use of so much Washington airspace that's available now, without the proposed airspace extension, the issue lies with the training commands and not the residents of Eastern Washington and the Methow Valley.

2. The Navy has been ordered by federal court to complete a new Environmental Impact Statement (EIS) for the NASWI expansion on four counts: 1) impact on classroom learning; 2) disclosure of the basis for greenhouse gas emissions calculations; 3) species-specific impacts on birds; 4) detailed consideration of an El Centro, California, alternative. Until the new EIS is completed, the Navy should not be considering a military training airspace extension in Washington State.

I found the EA document inadequate and dismissive of the impact that noise from these aircraft will have in the Methow Valley. In addition, the approach and departure altitude changes for ingress and egress of the Okanogan D MOA and Mazama ATCAA will be directly over the North Cascades National Park and two designated wilderness areas at minimum altitudes of only 2,000 feet AGL in high terrain. The EA is a truncated assessment that is missing the important criteria of a EIS which is the proper document and process for this type of proposal.

3. Despite assurances of no increase in training flights noted in the EA, this is not enforceable, and the proximity of the Okanogan D MOA and Mazama ATCAA to NASWI will likely drive extensive use of the location for fuel savings as compared to other locations in the NWTRC.

4. The upper Methow Valley at Mazama and the surrounding wilderness area is a year round recreational area with a critical economic impact for residents and businesses here. It is the largest cross country ski area in North America which brings economically important tourism to the valley each winter. It is a popular area for hunting and fishing, hiking and climbing, and camping with many US Forest Service campgrounds filling up every summer. The impact of noise and frequency of EW aircraft operations in the area will have a measurable negative impact on the local economy.

5. Because of the high risk of wildfire in the terrain covered by the proposed airspace extension the use of flares for Air Combat Maneuvers should not be permitted, but this is mentioned in the EA document (Section 2.5.2). The discussion in this section provides inadequate protection for wildfire prevention. In addition, military aircraft can and do crash in training exercises. I have direct experience with such incidents. I know that such an occurrence would be tragic both for the military members and families, and in the event of wildfire ignition, for Methow Valley and Okanagan County residents.

For these reasons and more I oppose the grant of an Eastern Washington Airspace Extension as proposed in the EA document. Until the new EIS is provided by the Navy as directed by the court and due process for public comment is completed for that document there can be no legitimate grant of use of this airspace by the FAA.

All the best,

Brian Moratti

**Subject:** [Non-DoD Source] Expansion of the Okanogan D MOA Could Harm Local Communities

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Norm Wilmes

**Subject:** [Non-DoD Source] Comment on expansion of flight training area . . .

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

At about 10:35 AM this morning (Friday, 23 February 2024), Navy jets flew directly over Mazama in the upper Methow valley. I was nearly finished with a beautiful, peaceful cross-country ski and heading home where I reside full time.

They were at relatively low elevation—similar to the top of Goat Peak at about 7000 feet. The noise emitted was intense, very intense. While it was less than one minute from first detection until disappearance to the northeast, the rumble left a lasting feel and negative impression about this needless intrusion into the lives of people and wildlife that live here.

The current Environmental Assessment that the Navy has put together uses noise levels averaged over a 24 hour period and finds those levels to be unproblematic. That approach is nothing short of a whitewash of the profound effect such intense sound events have on what is a quiet, peaceful valley under normal conditions. For humans, we quickly recognize what the source of the frightening sound is, but wild animals do not understand the source and can be strongly affected by such frightening intrusions. This must be factored into any EA for it to have validity.

In addition, closely adjacent to the Methow valley is the North Cascades National Park and to the north is the Pasayten Wilderness. These areas should NOT be overflowed in ways that have strong negative effects on the animals resident there or humans enjoying the natural environment these provide. Overflights must be at much higher altitudes than observed this morning.

Please do a better job at minimizing the negative effects of the training flights in this area. Please do not expand the area to include the Pasayten and please require flights to be higher altitude than those low blasts through the Methow that we observe all too often.

Thank you,

Gerald Smith  
17907 State Route 20  
Mazama, WA 98833

Hello,

I am a resident of Mazama, WA and I understand that the Navy would like to use airspace in this area for expanded training opportunities.

While I support the military in their preparedness, I cannot help but think there are far better, less traveled and less populated areas of the state in which this practice could take place.

The Methow Valley has achieved a great deal in the last four decades that protect the wilderness and the wild nature of the Methow River Watershed. Most recently, we were able to stop a copper mine from going in above Mazama and Congress has now protected the watershed from mining in the future. We have convinced residents to observe dark sky initiatives. We have protected wildlife and have a citizenry that is constantly educating itself about how to live in harmony with nature. We have worked hard to protect the flow of the Methow River so that salmon can return to spawning grounds by swimming several hundred miles up river from the ocean.

People come from other states where valleys like ours have been subdivided into condominium complexes everywhere. They marvel at what the valley resident have achieved.

We are a hub of tourism. People from cities come to our valley for recreation and peaceful times. This fact is central to the economic well being of our valley.

The Navy's request seems like another huge blow to keeping this area wild, while welcoming to thousands of visitors on any given summer or winter weekend.

We have worked hard over the past four decades to achieve this peaceful co-existence with nature and with visitors. It seems like common sense to look elsewhere for training grounds.

Joan Wellman  
Mazama, WA

**Subject:** [Non-DoD Source] Proposed new flight training area near Winthrop, WA, (Proposed Okanogan D MOA)

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

I live in Winthrop, Washington and am writing to comment on the proposed new flight training area nearby. I fully understand that the Navy needs training areas. But, the navy's current training area already contains much of Northeast Washington including Winthrop.

Training flights already have a negative impact on the quality of life here primarily due to noise levels that disrupt sleep, work, and recreation and detract from the things that are valued by most of the people who choose to live here: a rural character, wilderness, and a diversity of wildlife.

The proposed new training area would be used primarily by Growlers which are the loudest of the navy's planes. The proposed expansion of the training area either into or nearer to wilderness areas and national parks is inappropriate and would create conditions that are very much inconsistent with the purpose of those lands.

Before proceeding further, a full EIS should be conducted that considers alternative training areas and an analysis of significant environmental impacts such as those on residents and visitors and wildlife. The EIS needs to take into account the cumulative effects of adding the proposed training area to existing training areas. Impacts on travel corridors to and from the training areas should be considered in addition to impacts within and adjacent to the proposed and existing training areas.

Thank you for the opportunity to comment.

Best Wishes,

Paul Sisson

**Subject:** [Non-DoD Source] Proposed increase of EA-18G Growler flights and geography

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

I am writing to oppose the Navy's planned expansion of EA-18G Growler flight activity across the North Cascades and Methow Valley regions. I sincerely appreciate the patriotism and dedication of all Navy pilots and personnel in defense of democracy and of America. However, an essential attribute that makes America worth defending is the presence of the wildlands and natural habitats that sustain all life on earth.

We can always find ways to justify incursion into new geographies – regardless of consequences. Instead, we must now prioritize protection of the few remaining intact natural areas that sustain us, our economies, our quality of life and all other species. Degrading the function, value and beauty of one of America's most intact and fragile ecosystems for expediency is morally and ethically wrong.

The United States Navy has the opportunity and the responsibility to lead by example. Please do the right thing and redirect Growler training activities to landscapes already degraded by human presence and activities.

Thank you for your consideration.

Eric Erler

**Subject:** [Non-DoD Source] Expansion of the Okanogan D MOA Could Harm Wildlife

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

I have experienced first hand the volume of noise created by Naval aircraft streaking through the Okanogan valley and surrounding mountains; it is shocking to think what this volume of noise may be doing to animals with much more sensitive ears.

Sincerely,  
LARRY ONEIL

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

• From: Vernon E. HERRST HMC/USN/RET

To: NAVFAC-NW-NEPA@US.NAV.MIL

Subj: Training in the Methow Valley Washinton Area

Sirs

It is with mixed emotions and feeling I write this letter to express my feelings about the U.S. Navy using the airspace over the Methow Valley in the areas of Winthrop and Twisp Washinton.

I say mixed as I thoroughly enjoy the fact that the U.S. Navy uses this air space for training purposes as being a retired Chief Navy Hospital Corpsman, it keeps me proud to have served in the Navy and knowing that the Navy is training our pilots to be the best in the world and are training to protect the freedoms that I served 22 years protecting.

I will say that I am thoroughly and completely discouraged that there are is a small group of people in this area that are complaining about what they call noise but these are the same folks that would purchase property next to a feed lot or hog farm that had been in the area for decades and then complain about the stink.

Knowing the actual people that are complaining I can say they have not served in any branch of the Military and are nothing but a bunch of crybabies

It is with a sincere hope that the U.S. Navy continues to use the air space over the Methow Valley for training our pilots so when they are needed they are in fact the best there is and can continue to protect this Great Nation

Sincerely and Respectfully

Vernon E. Herrst

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

To whom it may concern -

**I would like to start by thanking you for the opportunity to comment about this important issue and also acknowledge that the Navy does need places to train. That said, I have serious concerns about the short and long term impacts and have outlined those below:**

1. **NOISE:** Noise impacts are at the heart of my concern about Navy flight operations in this geography. Methods of calculating noise levels understate potential actual noise: The Navy uses Day-Night Average (DNL) to indicate an average sound impact, when it is likely to be experienced much more loudly at a given moment. The Navy should indicate instantaneous levels of sound which could be experienced. The lack of loud human noise is a significant attribute drawing people to live or visit the Methow Valley and enjoy the surrounding North Cascades. Moreover, numerous scientific studies have shown that loud sounds have a negative impact on human health (including mental health and the ability to think). **I request greater clarity regarding actual potential noise levels.**
2. **WILDLIFE:** Wildlife, including many protected species, live at high altitudes in the North Cascades where they are more likely to both hear and see low level jet flights, especially in contrast to naturally low background noise. The EA recognizes the lack of good data on this topic. It is incumbent on the Navy to develop information on the real potential effects of noise on wildlife. The analysis should address in greater depth noise impacts on our diverse bird species. Of special note are potential implications of this proposal on areas where grizzly bears may be introduced in the near future and also the impact on lynx, wolverines, and other critical species. **I request more in-depth analysis of potential noise impacts on wildlife.**
3. **RURAL CHARACTER & COMMUNITY VALUES:** The Navy suggests it will follow Best Management Practices for low altitude training, including avoiding populated areas and only flying after dawn and before sunset. However, Table 3-1 in the EA indicates the preferred alternative will include more than 100 jet flights at night. It also defines “daytime” as lasting until 10 pm, after bedtime for many. There is no reference in the EA at all to a question of concern: “What is the impact on childhood learning of aircraft noise in the Methow Valley?” This potentially subtle impact has been highlighted as very important in other places where Navy growlers have operated. **I request the Navy consider the impact of noise on the quality of life in the Methow Valley.**
4. **RECREATION:** In recent decades, the Methow Valley has become a year-round destination for recreationists from around the world. The EA dismisses potential impacts by saying noise would “cause minimal disturbance to land based recreational and tourism activities.” (p. 3-53) Given its important as a primary driver of the local economy, this topic deserves much greater attention in an

**EIS. I request the Navy document the potential economic impact of this proposal on high quality recreation in the Methow Valley.**

5. **CLIMATE:** We deserve a clear understanding of the consequences of this proposal from an emissions standpoint. This provides further justification for an EIS rather than an EA. **I request for a detailed analysis of fuel emission impacts from Growler activity.**
  
6. **OVERALL TRANSPARENCY:** The EA includes no useful information on the transit routes (outbound and inbound). These routes pass over tens of thousands of people and thousands of acres of wilderness, with the same kinds of impacts highlighted above. This is a significant omission that should be addressed. **I request an analysis of the jet noise impacts in transit from Whidbey Island to conduct operations in North Central Washington.**

Thank you again for the opportunity to comment and I look forward to hearing your responses to my concerns.

Best,  
~ Britt Ericson

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Sherry Howard

Today is February 23rd and it's 10:40am. I took this video to capture the sound of a Growler jet flying around the Upper Methow Valley. I was in my home, all windows closed when I heard (and briefly saw) the jet. Please tell me how the jet noise, in the current state of what is allowed, would not impact our valley if more flights were allowed. Please do not expand training in the Upper Methow Valley as the increased noise would be detrimental to those of us that live here, recreation here and enjoy a life that is not found in very many places in Washington State. If today's jet noise bothered me, then I can only imagine the impact to the wildlife that we are fortunate to have in this part of the valley.

Please provide greater clarity regarding actual potential noise levels. Methods of calculating noise levels understate potential actual noise: The Navy uses Day-Night Average (DNL) to indicate an average sound impact, when it is likely to be experienced much more loudly at a given moment. The Navy should indicate instantaneous levels of sound which could be experienced. The lack of loud human noise is a significant attribute drawing people to live or visit the Methow Valley and enjoy the surrounding North Cascades.

Our Methow valley is already subject to major noise impacts from numerous existing Naval operations which allow flights as low as 300 feet above the valley floor. The proposed expansion will add significantly to noise effects. Cumulative impacts should be analyzed in an EIS.

Sincerely,  
Monica and Lawrence Hall

I am opposed to increased flights in Okanogan County for the following reasons:

1. The studies conducted averaged the maximum noise level over a 24-hour period. That may be an accurate assessment of potential impact on my hearing. It is NOT an assessment of the startle and stress factors of sudden flyovers and repeated noise all day for me.
2. For the same reason, increased noise levels have an ongoing detrimental effect on wildlife.
3. Pilots do NOT obey any rules about elevation. I have repeatedly seen pilots in their jets from my hilltop home. I would not be able to see into a cockpit 300 feet above me. You, reading this, would not want to suddenly see a jet and pilot that close to you and be slammed by that sound.
3. I am opposed to fighter aircraft because they are killing machines. I do not support the Navy in their defensive or offensive training.

Thank you for recording my input.

To Whom It Concerns:

I recently visited the Methow Valley and was dismayed to hear the growlers, a sound I'm very familiar with as my home is in Port Townsend. I then learned that the number of growler flights is proposed to be expanded in the Methow.

I sincerely encourage an EIS be done, to reveal a more complete account of the effects of increasing growler flights. I've experienced the impacts of more growler noise over the Olympic Peninsula when flights from Whidbey were increased there.

The sounds disrupt human sleep and daily activities. They also affect wildlife, in both the Methow Valley and on the Olympic Peninsula.

Please study the impacts of more growler noise on the Methow Valley, before interrupting the lives of both people and wildlife in this isolated, sparsely human-populated environment.

Jean Mann

To whom it may concern,

Thank you for the opportunity to comment on the Navy's request to increase training airspace. As a 25 year employee of Honeywell International - Defence and Space department, I've helped design some of the equipment used by the Navy, and am a strong supporter of the Navy's mission.

I am also a resident of the Methow Valley. I am drawn to the North Cascades because of its majestic beauty and untouched natural wilderness which is the corner stone of the USA. I have strong concerns regarding Navy flights over the North Cascades negatively affecting this wilderness. Please withdraw this request for increased airspace. At a minimum, conduct an Environmental Impact Statement (EIS) on the wilderness experience, wild animals, and determine expected noise level from the flights.

I have no interest in limiting the Navy's training needs or limit the readiness of our forces. What are the other locations to train that are not over the US's most precious wilderness resources?

Thanks you for taking the time to read and understand these comments.

Regards,

Peter Cousseau

Enduring what noise flight training visits on the Methow Valley is a small price we must willingly pay. Navy pilots risk their lives for us and our idyllic way of life. They need and deserve any opportunity we can afford them to develop and maintain the proficiency that their missions demand.

Having flown a private Cessna 185 float plane in Alaska for 30 years, I can't conceive of the challenges navy pilots face, just operating fighter aircraft at all, much less in combat. But, I do know that only training fosters proficiency, the more the better.

My perspective is based on:

One, 18 years in the Methow Valley with three houses in or adjacent to the town of Winthrop.

Two, the warm feeling I get when those jets occasionally disrupt the serenity we enjoy, knowing what the pilots risk for us .

Three, the political leaning of my committed liberal views.

Four, the sense of relief I felt, when the US Army discharged me medically, and I did not have to risk my life in Vietnam.

Five, 30 years of flying in and skirting MOAs, near Fairbanks and across Alaska, without any concern for my safety arising from military aircraft.

Six, my association with my father-in-law, Henry Mcneely, himself a navy test pilot of some distinction.

So, because the navy has concluded that its pilots need additional training opportunity in the Methow Valley, I support it. What knowledge could I have to call that into question?

James (Jamo)Parrish

Hello, I am a Winthrop, Washington resident, and I strongly support the no action alternative for the North Cascades training site expansion project. I also believe the more in-depth environmental analysis is necessary. With the recent listing of wolverines under the endangered species act, and other sensitive species in the proposed expansion area, an in-depth analysis of acute disruption impacts to these species is necessary.

Thank you,

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Therese Chatelain

I oppose expansion of operations to the Methow Valley and North Cascades. The Cascades are an essential wilderness area that would be harmed by this activity.

Subject: Protect the Pasayten and Lake Chelan-Sawtooth Wildernesses from military jet noise -- Eastern Washington Airspace Extension Draft Environmental Assessment

To Secretary of the Navy Carlos Del Toro, FAA Administrator Michael Whitaker, United States Pacific Fleet Commander Admiral Samuel J. Paparo, Jr., Naval Facilities Engineering Systems Command Northwest Commander Rear Admiral Jeffrey J. Kilian, and Environmental Planner Katherine Jesser:

As a native Washingtonian who has fond memories of backpacking in the Pasayten and Lake Chelan-Sawtooth Wildernesses, I wish to submit the following comments on the Draft Environmental Assessment (EA) for the proposed Eastern Washington Airspace Extension.

The Draft EA inadequately analyzes impacts on Wilderness. For example:

- Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.
- Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. My work week is Thursday through Monday, so if I were to visit the Pasayten and Lake Chelan-Sawtooth Wildernesses on my days off, my visits would be negatively impacted by military jets and the noise they make. Those who visit during the week often do so to maximize their opportunities for solitude and silence.
- Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress.

The No Action Alternative is the best choice in this Draft EA. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness. The boundaries of all existing Military Operations Areas and Air Traffic Control Assigned Airspaces should be re-drawn to eliminate all

overlap with designated Wildernesses.

Thank you for your consideration of my comments. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources.

Sincerely,  
Christopher Lish  
San Rafael, CA

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Thank you for the opportunity to comment on the proposal to increase flight training for Growler jets in the Methow Valley and North Cascades region.

As a visitor from north Puget Sound where growler noise is also a significant source of noise pollution in my community, I am disappointed to learn that increasing flights in the Methow area is being considered. While I understand the need to train, perhaps it is time to redirect funding into engineering technologies that reduce noise levels.

Thank you,  
Katherine Darrow

To Whom It Concerns:

I am a resident of Port Townsend, WA, where I live on a hill near the water, and have frequent first hand exposure to how loud the Growler jets are. They often keep me awake at night, and are at times too loud to carry on conversations with my friends and family. When I hike in wilderness areas in the Olympic Mountains, I hear them at times and they detract from the wilderness experience of quiet and solitude.

However, I also frequently visit the Methow Valley. Cross-country skiing and hiking are two activities that I enjoy in this area, which are also severely impacted by Growler noise. I have heard them on my current visit, and they are not compatible with what is an increasing rare attribute—quiet, without motorized or mechanical noise. The Navy needs to conduct an EIS, not an EA, to better understand the impacts of growler noise on non-motorized recreation, which is essential to the Methow Valley economy.

The Methow region is one of the last areas of the lower 48 with a nearly intact ecosystem that includes wolves, wolverines and many birds, with the reintroduction of grizzlies a possibility. The Navy must do a better analysis of the impacts of Growler noise on wildlife, especially ESA-listed species like wolverines.

I understand that the Navy requires training time with the Growlers, but the impacts should be shared equitably with the entire US, not a few small communities like Port Townsend and the Methow that have tourist based economies, with visitors and residents there for the amenities of quiet and wildlife.

There are other concerns, including the impacts of the jet noise on children in school and military veterans with PTSD. In conclusion, the Navy's proposal gives rise to a number of serious issues that merit further analysis in an EIS, not an EA.

Thank you very much for considering my comments.  
Debra Ellers  
Port Townsend, WA

**Subject:** [Non-DoD Source] Expansion of the Okanogan D MOA Could Harm Wildlife

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Debbie Mahder

Hello,

I am a resident of the Methow Valley. I am writing to urge you to not increase Growler flights over the Methow Valley. There would be significant adverse impacts from this increase. This type of air traffic noise is disturbing to wildlife in important habitat areas. Noisy, low-flying aircraft are not consistent with the goals and values for wildlife area and wilderness area designations. The increase in noise would be very disruptive to myself and other residents of the Methow region. Please do not increase Growler flights.

Thank you for this opportunity for public comment.

*Kirsten Joy Harma

Hello, I am a resident of the Lower Beaver Creek neighborhood south of Twisp in the Methow Valley. Having reviewed the Eastern Washington Airspace Draft EA, I find that it fairly and thoroughly evaluates the impacts to this area, which are minimal. Regarding noise, I often work from home and occasionally see and hear the jets and they are not bothersome at all. In fact, they come and go so quickly it is difficult to get outside quickly enough to catch a glimpse of one. I personally find it a benefit to our community and an inspiration to our youth to get to have these amazing aircraft and talented pilots train in our rural area for such an important national and global purpose.

Thank you,  
Heidi Appel  
Twisp

**Comment in OPPOSITION TO Proposed Expansion (Alternative 1), Expansion with additional training (Alternative 2) — and IN FAVOR OF NO ACTION (preserving the status quo).**

We are 45-year property owners in the West Chewuch watershed, which runs north from the town of Winthrop to the Canadian border. We spend approximately 1/3 of our time in our wilderness cabin on Cub Creek Road, at an elevation of 2500'. We are hikers, snowshoers and cross-country skiers in the winter, and avid monitors of our environment and all of the birds and animals resident in our combined forest/shrub-steppe/high alpine habitat and ecosystem. The area immediately impacted by current "training" flights and expansion of the number, elevations, and square miles covered, is exactly the area where we live and recreate, and hope to escape from the noises of urban living.

We have observed and been subject to regular Navy "training" flights over our cabin, and when hiking in the mountains to the east (approximately 50 miles to the east) and west (approximately 100 miles to the west), where we hike and backpack and camp. We have been subject to very low-flying flights both in our cabin (2500'), and at trails to the east (Tiffany Mountain trailhead at 6000' and summit at 7800') and the Pacific Crest Trail (PCT) to the west in the vicinity of Rainy Pass/Harts Pass/to Canadian border.

These flights have, for many years, including the past few years when the FAA restricted the number of these flights to allow for increased commercial airspace, **have had (1) negative impact on us and all who live in the Methow Valley, (2) a negative and harmful impact on public health and safety of residents and visitors and tourists in the area, (3) a dangerous impact on resident wildlife and birds, (4) a frightening impact on the health and safety of children (and some of us mature adults), an environmental justice impact on the lower income full-time residents and families in the Valley who are subject to all of these flights, and (5) a threat of increased hearing impairment for younger people as well as older people like us who are already living with significant ADA-recognized hearing loss.**

WE OPPOSE BOTH ALTERNATIVES 1 AND 2 FOR EXPANSION OF TRAINING AREAS, BECAUSE OF THESE MANY NEGATIVE ENVIRONMENTAL IMPACTS ON PEOPLE OF ALL AGES, WILDLIFE AND HABITAT, AND ENVIRONMENTAL JUSTICE ISSUES.

Explanations of the negative impacts, justifying no change in current flight schedules, follow:

1. We have witnessed and been subject to these flights "coming out of nowhere," with no warning, screaming overhead at very low elevations above our cabin, above us at trailheads in the range of 6000', without advance notice — and certainly without any demonstrated military security "necessity" to our collective good. Subjecting US citizens and residents to the noise, frightening flights, and surprise "attacks" by naval planes, serves no good — and makes all of us feel like we are living in a war zone.

My husband and I are members of the Vietnam War generation in the US, and these flights take us back to that terrible war and the huge losses of American and Vietnamese lives which that war — largely by helicopters and attack planes like the Whidbey Island jets — entailed. These flights disrupt the peace and security of our lives, and cause both of us to have nightmares about reliving Vietnam and other wars in which the US has been engaged throughout our lives.

2. The negative impact on public health and safety of all in the area can be measured by the wide reach of these training flights, which fly at extremely high speeds, cannot be detected until they are virtually "on top of" us, and from which we cannot escape. The psychological and audible impact of these flights is only negative. An EA is required to assess these consequences with scientific data instead of dismissing them with a one-liner in the preliminary "assessment."

3. We are avid birders, and know that the impact of resident and migratory birds is extremely negative. Birds who mate and nest and breed in the Methow Valley will be disrupted by these screaming machines of war flying overhead. Your preliminary "assessment" does not quote a single ornithologist stating that there will be "no impacts" on breeding and/or migratory birds from these flights of war machines. The same is true of impacts of the many animals who live and breed in the Methow Valley — large mammals like moose, cougar, wolves, and deer, and the many smaller and threatened mammals who have been the subject of many years of study and programs by USFWS and WFWD to support their increase (wolverines and fishers are examples of these for whom wildlife biologists are monitoring "comback" programs.

4/5. When our daughter was about age 3, one day I was holding her in my arms when one of these naval "training" flights flew so low over our cabin (at 2500') that it cast a huge shadow over the structure, out of nowhere, making an extremely loud noise. I told her that those planes "sounded like the Blue Angels." A few months later, at our Christmas at the cabin, when I gave her an angel ornament to hang on the tree, she said, "I don't like angels." All of this from the fright and terror of having one of these flights screaming overhead at low altitude. Disrupting the peace and quiet of our mountain 'retreat' and scaring both of us. It is well documented that the weapons and high volume noises of war harm the ears and hearing of young children, and further impair the hearing of those already impaired (like us). A detailed EIS will confirm this negative consequence of all of these flights, and confirm that no expansion should take place.

6. Environmental justice is disserved by subjecting a beautiful but low-income rural community to the disruption, scares, and loud noises of military flight trainings, when more affluent communities are spared from this negative environmental impact. Imagine what response you would receive if these flights were to take place over and around an area like Sun Valley in Northern Idaho? Or the San Juan Islands with its multi-million dollar homes and estates for the privileged elites?

**Summary. We OPPOSE both Alternatives 1 & 2, and we support no action, i.e. preservation of the status quo and no increase in these "training" flights. The Navy must complete a comprehensive EIS before any additional changes are made. Actually the status quo of these flights has such a negative environmental impact that they should be stopped entirely, but at a minimum there should be no increase in these flights.**

**PLEASE DO THE FOLLOWING:**

**1. Add us to your email list for notifications of action/decisions on this EA, further changes in the EA, finalization of this EA, rights and procedures for appealing this EA, and all further steps in this process.**

**Subject:** [Non-DoD Source] comment on proposed expansion of training area over Okanogan County

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Hello,

I'm writing to express my concern about the proposed expansion of training areas in Okanogan County for fighter jets. We live in the Methow Valley and our daughter has a genetic disorder and sensory sensitivities. I worry about the negative impact that increased exposure to loud fighter jets would have on her, and frankly all children in our community. My children find the current jet traffic very unsettling when the planes fly overhead, I do too. We live in a small rural community in part for the peace and quiet that our valley offers our family. There are few places left like this in the US. Please consider the peace and quiet of our rural valley as a valuable resource in your analysis and let us keep it.

Thank you for your time.

Best,  
Kathryn

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

## Comment on expansion of Navy Overflights

To whom it may concern,

Thank you for providing the opportunity for public comment on the matter of expanding U.S. Navy training flights. I understand that this is a critical piece to our national security, and pilots need an appropriate place to train. However, the Methow Valley and North Cascades have already been subjected to negative impacts from existing and past military operations. This community highly values what makes this region great: vast wilderness full of biodiversity, rural recreational opportunities, and habitats suitable for sensitive and critical species recovery.

I am formally requesting that the U.S. Navy conduct a full-scale Environmental Impact Statement per the National Environmental Protection Act. The current Environmental Impact Assessment does not fully address proposed alternatives for training locations elsewhere in the United States. Additionally, it does not provide an in-depth analysis of environmental impacts that could be considered significant.

This full Environmental Impact Statement should include a clearer picture of the potential actual noise levels beyond the calculated Day-Night Average and what instantaneous levels of noise could be experienced by residents. The lack of human-created sound often draws tourists to the area and could be greatly impacted by this proposed expansion. Cumulative impacts should also be included, as current Naval operations are contributing to noise that has not been addressed. I am also requesting a more in-depth and transparent analysis of the noise impacts on wildlife in the proposed expansion zone. The expansion will include designated wilderness areas that are home to many sensitive and endangered species, and real noise impacts should be heavily analyzed. Our diverse bird species should be much more heavily analyzed, and the potential reintroduction of the grizzly bear should also be discussed in the impact statement.

Another request is that you consider the impact of noise on overall quality of life, as the preferred alternative does not follow the Best Management Practices for low altitude training. The preferred alternative calls for 100 flights at night and daytime lasting until 2200. This does not align with the Best Management Practices which call for only flying after dawn and before sunset. Another quality-of-life matter that was not even referenced in the EA draft was the potential impacts on classroom learning because of aircraft noise. In other areas where growlers have operated, this has been sufficiently highlighted.

In the EIS, economic impacts should also be more carefully and thoroughly discussed, as the current draft does not give it enough attention. The Methow Valley depends heavily on tourism to drive the local economy and that deserves to be acknowledged.

More details regarding emission impacts from growler activities are also greatly needed. The current discussion does not provide enough clarity for the public to understand potential emissions-related consequences to the climate.

Finally, I ask for more transparency in two areas. First, an analysis of the transit routes of jets from Whidbey Island to the proposed training areas. There are tens of thousands of people that could be impacted by these routes, and the current draft assessment appears to have omitted that entirely. I also request for the public to see real flight data that documents altitudes and noise levels continuously and for the U.S. Navy to commit to installing monitoring equipment to provide such information. This would greatly improve understanding and make it possible to monitor short- and long-term impacts.

I will conclude by thanking you for the time you committed to reading this letter. I look forward to seeing the final draft of the proposal with a full Environmental Impact Statement.

Sincerely,

Bryanna Lewis

**Subject:** [Non-DoD Source] Expansion of the Okanogan D MOA Could Harm Local Communities

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Derek Benedict

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

**Subject:** [Non-DoD Source] Proposed expansion for Flights over North Cascades

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

To Naval Commanders,

I am writing to express my concerns regarding the proposed expansion of flights over north central Washington state, in particular Okanogan County. I understand the Navy needs to train pilots on the advanced aircraft our country flies for our national security and interests abroad. We currently have some flights over this area of our state now which I've experienced when hiking in the North Cascades mountains. I find one sees the jet approaching (sometimes at a seemingly low altitude) before one hears the very loud engine sounds. I generally hold my ears to keep the deafening noise at a minimum. Noise is a concern.

A second concern is the possibility that jets would train over areas that are designated Wilderness such as the Pasayten Wilderness. These areas are set aside by our country for people to experience the peace, quiet and observe nature. Moreover, for some species such as wolverines or bears, this noise would be disruptive.

I urge the Navy to perform an Environmental Impact Statement before the flight patterns are changed. It would be helpful for the residents of this county to understand how the increased area for flight training would impact noise levels, wildlife, and recreation, especially in the designated wilderness area.

Thank you for considering my comments,  
Nancy Kuta

**Subject:** [Non-DoD Source] Eastern Washington Airspace Extension Draft EA

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Dottie McComas

**Subject:** [Non-DoD Source] Eastern Washington Airspace Extension Draft EA

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear,

Dear U.S. Navy personnel,

I'm commenting on the Draft environmental analysis (EA) for the proposed Eastern Washington Airspace Extension. Four things in particular:

1. The Draft EA inadequately analyzes the extension's effects on Wilderness.

Congress identified solitude as a wilderness value (The Wilderness Act of 1964, 16 U.S. Code §1131(a) and (c); The Washington Wilderness Act of 1984, Pub. L. No. 98-339, 98 Stat. 299 (1984)), but the EA does not consider it. It's one of the main reasons why people seek Wilderness areas such as the Pasayten and Lake Chelan-Sawtooth Wildernesses. Jet noise might not damage hearing for humans on the ground (which the EA mentions), but it will surely shatter solitude. All three proposed actions should consider this.

Dismissing noise on human visitors because most flights would occur Monday through Friday incorrectly assumes that people only visit Wildernesses on weekends. Many choose weekdays to increase chances for solitude and silence; however, their desire for such Wilderness values should not be discounted simply because there are fewer such people.

Wilderness is for wildlife, too. Congress created these areas for their security and well-being: See the Washington Wilderness Act of 1984 citation above, which says that the Lake Chelan-Sawtooth Wilderness Area was created "to preserve the wilderness character of the lands" and to "protect [...] wildlife habitat." Disturbances from military aircraft will disrupt their behavior and cause unneeded stress even if they only last "seconds." Please give them the peace and solitude they and the people that visit their lands and waters need.

2. Given the above, the No Action Alternative is the best choice in this Draft EA.

3. If this proposal proceeds, the Navy must complete a full environmental impact statement (EIS) to identify and fully analyze all of its impacts, including those to designated Wilderness.

4. The Navy should redraw the existing MOAs' and ATCAAs' boundaries to no longer overlap with designated Wildernesses.

Thank you for your consideration. I understand the Navy's need to train skilled pilots and I support its efforts, but it should do so outside of designated Wilderness areas.

Sincerely,  
Jordan Vaughan

**Subject:** [Non-DoD Source] Mazama fly Zone (WTF)

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

The proposed training fly zone to include Mazama is absurd. We moved here to enjoy the open spaces, quiet, abundant outdoor activities which include: Mountain Biking, Cross Country Skiing, Hiking, Rock Climbing, walking with our dog.

I have been on the receiving end (several times in Winthrop) from a very low and extremely loud fly by and it was very unpleasant (huge understatement) A beautiful day and then wham a low flying, in your face fighter jet just above us so close I could probably have read the inscription on the side of the plane if it had not powered by us.

This area is a HUGE and very important open space and recreational area for so many people. In Mazama we have world class cross country ski trails and rock climbing. People visit from all parts of the country and the world to see this amazing area.

There must be another option somewhere else. If this plan went thru it would force us to move. This has been our dream to retire here and now we are here. Still working part time but loving the area!

There will be a huge liability put on the Navy for accidents which will occur with either Rock climbers focusing on a pitch and then a blast which sends them to certain death in light of the fact the routes here are high level, or bike riders surprised and then crash. Sounds a bit dramatic but with that sudden input it is sure to happen.

This is the last place in which training runs should occur! Please do not make us waste our time fighting you on this. We all have many other things to be doing than organizing and putting time and effort in to convincing you to seek other locations.

In fact, why it's happening in the Methow Valley at all is so frustrating. This needs to stop now!

Regards,  
Karen Quarre

**Subject:** [Non-DoD Source] Comment on MOA Expansion

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Reader:

I am writing in response to the Environmental Assessment for the Eastern Washington Airspace Extension. I am in favor of the No Action Alternative. My husband and I are full-time residents of the Methow Valley; we live between Winthrop and Mazama.

What bothers me the most about alternatives 1 and 2 is the fact that the proposed area is right over a highly prized tourist, residential, and wildlife area, some would consider the crown jewel of the Methow Valley. Furthermore, this area is relatively small compared to the amount of airspace in the current MOA. That the U.S. Navy is arguing that they need to have this extension to improve their training capabilities suggest that what is really at play is the opportunity to fly in a confined space at 300 ft AGL. With airplanes like the Growlers this would be extremely disruptive to everyday life here in the Methow for residents, tourists, and most importantly, the wildlife. It also might very well physically endanger those on horseback trips in the backcountry. I once spooked a horse pack train as a hiker, when I unthinkingly slapped at a mosquito on my thigh. Several horses bucked down the hillside, some lost their footing. Imagine what might happen to a rider if a horse spooked and plunged after hearing the sudden intensity of a Growler loud and low.

On June 29, 2022, my husband and I hiked up to a bluff above Falls Creek Falls in the Chewuch River drainage. That day, two jets went screaming by us hot-dogging down the drainage **below us** as we stood on the bluff. Were they 300 ft above ground level? Hard to tell. At the time, we just chalked it up to jet jockeys enlivening their training run. The proposed alternatives suggest that this would be not an extraordinary event but something to train for, with louder and larger jets. This is unacceptable.

One of the things almost every visitor who has stayed with us has commented on is how quiet it is. We live far enough away from Highway 20, and although we hear the occasional jets overhead from commercial flights, their noise is not prolonged, frequent, or disturbing. This quiet, this isolation is one of the reasons we moved here; locals take pride in the fact that the closest stoplight is 50 miles away. Having Growlers screaming by overhead or below one's feet if one is on a mountaintop enjoying the views would radically impact the quality of life here in the Methow Valley. It is also possible such training activities could be life-threatening in certain situations.

**Subject:** [Non-DoD Source] Expansion of the Okanogan D MOA Could Harm Wildlife

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Please ensure you are adequately taking all precautions to safeguard our national treasures including fragile ecosystems and wildlife.

Sincerely,

Abi Ludwig

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
Dany Cockburn  
PO Box 187  
Bearsville, NY 12409

I've lived in Mazama for the past 17 years and spend time daily exploring the Okanogan and Colville National Forests and have backpacked extensively in the Pasayten and Lake Chelan-Sawtooth Wilderness areas. A big part of why people live and visit here is because of accessible outdoor recreation and wilderness experiences. It is a unique area in that it provides contiguous wild areas to the North Cascades National Park and an extensive intact ecosystem.

Living here, I am familiar with the noise impact of navy flights flying over the Chewuch and Okanogan Valleys further east. There is a significant difference in quality of wilderness experiences between the western Pasayten and the eastern Pasayten where jets fly over frequently disrupting wildlife and birds. It is incredibly startling to have sudden high decibel Jet noise while miles away from roads.

There is already an extensive flight training area and encroaching closer to the North Cascades ecosystem will be a detriment to the quality of life here, its rural character and have a negative impact on the economy of the area that relies on visitation and recreational opportunities.

The North Cascades are a beloved area for people to visit from all along the coast and experience the natural world and further encroachment of jet noise will tarnish this experience.

Thank you for the opportunity to comment. My preference is the No Action Alternative.

Serena Lockwood

Thank you for the opportunity to comment on the Eastern Washington Airspace Extension Environmental Assessment Draft (January 2024). As residents of the Methow Valley for the past two decades, we have serious concerns with this EA based on our past experiences with naval air operations here and due to the changed nature of the Methow Valley economy. While we recognize that the Navy must have extensive training areas, alternative areas should have been considered which would be less sensitive to the major noise impacts from Naval air operations. The Methow Valley has changed a lot over the last 20 years, becoming a popular escape destination year-round for hiking, mountain biking and skiing in a spectacular setting away from the noise of cities. This nature tourism has become a key feature of the local economies. The EA, while recognizing in 4.4.6 that "airborne acoustics from aircraft overflights...may potentially impact recreational and tourism activities" it concludes that "impacts would be brief and not an impact on the overall long-term enjoyment of recreational areas." We submit that this is a highly debatable conclusion based on the many disruptions to our attempts to enjoy nature which have occurred over the years.

Not addressed in this EA are impacts on state-listed endangered species including gray wolf, lynx, fisher and wolverine. A decline in the mule deer population has resulted this winter in the WDFW restricting access to much of the Methow Wildlife Area. If the mere presence of recreating winter visitors is disrupting the winter range of the mule deer, what is the effect of daily Naval aircraft activity over them? An EIS needs to establish impacts on mule deer population dynamics in addition to other species and the avian wildlife this valley is known for.

The Day-Night Average Sound Levels defined on p.2-1 of the EA are misleading because of the low ambient noise levels prevalent in the Methow Valley when Naval aircraft are not present. The "surprise" effect cited on p.2.1 of the EA describing the sudden onset of aircraft noise from low-flying jet aircraft needs much more detailed analysis from an EIS in relation to the shock impact on both wildlife and people.

Missing from the EA is any analysis of effects on nearby North Cascades National Park which would inevitably be impacted by overflights to the MOA's referenced in the EA.

Many residents came to this valley specifically to enjoy the natural beauty and quiet. Increasingly over the years as more flights and noisier aircraft (particularly EA-18 Growlers) were introduced by the Navy, we've had to try to adjust our outdoor activities to compensate for the Navy's flying schedules to the point where we try not to be outside after 9AM when these aircraft arrive and detract from any enjoyment of the outdoors. The low-level flights we've experienced over the years are particularly disruptive in the shock intensity. We've been on trails such as the one around Patterson Lake (a low trail not far above the lake) when a Navy aircraft came down to skim the lake actually lower than where we were. In the Okanogan B MOL the 300 ft. minimum flight level needs to be significantly raised to alleviate stress on both people and wildlife, and continuous monitoring with the installation of flight recording devices needs to be accomplished to insure compliance.

Concluding these comments as we are inside our house with the windows all closed this evening, we were unable to hear some of the evening newscast because of the presence of a circling EA-18G. We strongly recommend that the Navy consider more appropriate training areas that do not have designated wilderness areas, endangered species and

such a nature-based economy as we've described. Vast land areas exist away from commercial corridors that could meet these requirements more appropriately, as well as over the Pacific, all of which should be addressed in an EIS.

Thank you for your attention, Brian & Carole Reid, 245 Waring St., Winthrop WA 98862

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered: The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Saara Snow

Thanks for the opportunity to comment on the proposed expansion of the Growler MOA. I live in the Methow Valley, and I am already significantly impacted by the noise from all the naval aircraft that fly overhead, both those that fly low and fast and those higher up. I have a significant startle response to low-flying craft, especially if I don't hear them coming and have not steeled myself for the noise and plugged my ears. Over time, these have a significant impact on my nervous system. The noise from both the low-flying and the high-flying jets impact my quality of life, especially the louder Growlers. Sometimes when they circle overhead for more than a fly-by, I simply have to go indoors if I'm lucky enough to not be out for a walk where I don't have a way to shield myself from the noise. I am concerned that despite assurances that overall flights will not increase that the proportion of Growlers will increase, adding to the overall experience of noise in the environment.

I appreciate your need to have places to train, but our area already endures more than its fair share of impact from your operations. Surely there are other locations in the US that you can use instead of asking us to endure an expansion of these activities.

Respectfully,  
Rhoda Walter

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Hello,

Thank you for opportunity to comment on this.

I do not believe the impact on wildlife or tourism in our valley has been properly considered.

The additional flights and air traffic will negatively impact wildlife in the Methow Valley as well as the surrounding wilderness areas. I have been in the path of these jets before when near Sun Mtn Lodge, specifically on the Meadowlark Trail, I had to put my hands over my ears because the noise was so extreme ( your decibel estimate is completely out of wack and not real), my dog bolted into the woods and was missing for 2 hours. I cannot believe this does not also effect wildlife. How did you gather the data that supports your no significant impact label for wildlife?

Ecotourism is the most important economic business in our valley. We have the one of the world's largest cross country ski trail systems, miles and miles of mountain biking and hiking trails, as well as being surrounded by wilderness areas. I do not believe you have taken the impacts to our ecotourism industry into account in your conclusion of nonsignificance. No one wants to visit a Nature area with jets flying over around and through the surrounding area. How could this not impact our economic future? There seem like a lot of places in the US that are better choices.

Lastly, our valley with it's limited development opportunities is one of the last great places in the world. We have clean water, clean air and quiet. We get this with a lot of trade-offs including no access to premier healthcare services; expensive goods, food and services; limited choices in arts, theater and restaurants. Can't we please keep our quiet lifestyle? We do not want additional flight activity in our valley.

Thank you,

*Sherry Malotte*  
*Winthrop, WA 98862*

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

I am writing in response to the Navy's proposal to expand its military training airspace in Okanogan County. As a resident of Port Townsend, Washington, I have personally experienced the impact of Growler training over Whidbey Island, and I am strongly opposed to extending that impact over such sensitive areas as the North Cascades and Mazama.

A federal court has ordered the Navy to complete an Environmental Impact Statement for the NASWI expansion of Growler training, and public accountability demands that no action on a further extension be taken until that has been done. The internal Navy Environmental Assessment produced for this proposed extension is not sufficient under NEPA guidelines and does not provide legal and congressional accountability.

Among the many troubling features of the proposal and the Navy's EA, there is no detailed information or analysis on the impact of jet noise in the transit routes between Whidbey Island and the Methow Valley, which will pass over thousands of people and sensitive wilderness areas. There is also no serious analysis of the impact on tourism and recreation in the affected areas.

The federal court also ordered a detailed consideration of El Centro, California, as a base for Growler operations, and the Navy has yet to comply with this order. I recognize that the Navy needs places to train, but given this current expansion proposal and its negative impacts on wildlife and human communities in this state, maybe it is time to consider siting the Growlers somewhere else.

Thank you for the opportunity to comment.

Sincerely,  
John Barclay

Dear,

Dear U.S. Navy personnel,

I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

Thank you.

Sincerely,  
S VanZant

**To:** USN NB Kitsap NAVFAC NW SVD WA Mailbox NAVFAC-NW-NEPA  
**Subject:** [Non-DoD Source] Proposed Navy Expansion

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

**First off we appreciate the opportunity to comment and acknowledge that the Navy does need places to train. The Methow Valley and the North Cascades already have significant negative impacts from military operations. This is not the place to expand training flights.**

**I choose to live in the mountains for peace and quiet, to enjoy the wilderness and wildlife. I am not one that enjoys noises that people, cities and the military creates.**

**The existing jet noise disturbs relaxation, sleep, gardening and recreating. They will fly so low through my side valley off the Methow Valley that it not only hurts my ears and creates ringing but I am unable to cover my pets ears so that they do not get ear damage.**

**We request that the Navy conduct an Environmental Impact Statement (EIS). According to the National Environmental Protection Act, an EIS must be prepared when a major federal action is proposed. In such a case, the public must have an opportunity to review a reasonable range of alternatives and a robust discussion of significant environmental effects. The Environmental Assessment (EA) for this proposed expansion of flight operations in two significant ways:**

- The Navy did not consider any alternative locations to conduct its training flights, such as conducting this training elsewhere in the United States. There are**

**numerous other land and ocean-based locations they could consider.**

- The Navy did not provide an adequate analysis of significant environmental effects.**

We ask for greater clarity regarding actual potential noise levels. Methods of calculating noise levels understate potential actual noise: The Navy uses Day-Night Average (DNL) to indicate an average sound impact, when it is likely to be experienced much more loudly at a given moment. The Navy should indicate instantaneous levels of sound which could be experienced. The lack of loud human noise is a significant attribute drawing people to live or visit the Methow Valley and enjoy the surrounding North Cascades.

The Methow Valley is already subject to major noise impacts from numerous existing Naval operations which allow flights as low as 300 feet above the valley floor. The proposed expansion will add significantly to noise effects. Cumulative impacts should be analyzed in an EIS.

Wildlife, including many protected species, live at high altitudes in the North Cascades where they are more likely to both hear and see low level jet flights, especially in contrast to naturally low background noise. The EA recognizes the lack of good data on this topic. It is incumbent on the Navy to develop information on the real potential effects of noise on wildlife. The analysis should address in greater depth noise impacts on our diverse bird species. Of special note are potential implications of this proposal on areas where grizzly bears may be introduced in the near future.

The Navy suggests it will follow Best Management Practices for low altitude training, including avoiding populated areas and only flying after dawn and before sunset. However, Table 3-1 in the EA indicates the preferred alternative will include more than 100 jet flights at night. It also defines “daytime” as lasting until 10 pm, after bedtime for many.

There is no reference in the EA at all to a question of concern: “What is the impact on childhood learning of aircraft noise in the Methow Valley?” This potentially subtle impact has been highlighted as very important in other places where Navy growlers have operated.

**The Navy needs to document the potential economic impact of this proposal on high quality recreation in the Methow Valley.**

In recent decades, the Methow Valley has become a year-round destination for recreationists from around the world. The EA dismisses potential impacts by saying noise would “cause minimal disturbance to land based recreational and tourism activities.” (p. 3-53) Given its importance as a primary driver of the local economy, this topic deserves much greater attention in an EIS.

**A detailed analysis of fuel emission impacts from Growler activity. We deserve a clear understanding of the consequences of this proposal from an emissions standpoint. This provides further justification for an EIS rather than an EA.**

**An analysis of the jet noise impacts in transit from Whidbey Island to conduct operations in North Central Washington. The EA includes no useful information on the transit routes (outbound and inbound). These routes pass over tens of thousands of people and thousands of acres of wilderness, with the same kinds of impacts highlighted above. This is a significant omission that should be addressed.**

**Continuous monitoring of flight activity is a must. As indicated in the Environmental Assessment, very significant Navy operations are already being conducted in this region of North Central Washington (Okanogan A Military Operations Area (MOA), Okanogan B MOA, Okanogan C MOA, Molson ATCAA, Methow ATCAA, Roosevelt A MOA, Roosevelt B MOA, Republic ATCAA).**

**To fully comprehend the cumulative effect of all of these operations (including the newly proposed Okanogan D MOA and Mazama ATCAA), the public deserves to see actual flight data which documents altitudes and noise levels on a continuous basis.**

**We request that the Navy commit to installation of flight recording devices to provide this information. Such information will go a long way toward building understanding and enabling assessment of both short and long term impacts.**

**Sincerely,  
Katherine Gunn  
Scott Bennett  
Libby Creek, Methow Valley**

**Subject:** [Non-DoD Source] Expansion of the Okanogan D MOA Needs an EIS Under NEPA

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Chelsea Pulliam

Hello Navy, I am against your expansion over the Methow Valley wilderness area for growler jets. The military missions regularly fly over now and are extremely disruptive from a pure noise level. It would be a crime to expand upon that and wreck one of the few quiet places left.

The low level flights done regularly over near the Twisp airport are both dangerous to civilian flyers and so very noisily. I know that our neighbor has regularly filed complaints as your pilots disregard the flight levels and come screaming over the river top. I am against your flying in this area altogether and believe your disregard for wild space is so great already it goes without mention. Go train over the ocean with your noisy jets where they belong.

Not a supporter of your further expansion and shit show.

**Subject:** [Non-DoD Source] Resident comment on MOA Expansion

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Hello,

I am writing as a resident of Twisp, WA in Okanogan county to share my perspective on the Proposed Okanogan D MOA. I live in a current MOA area in Twisp and experience multiple negative impacts from the noise and disruption. I understand the Navy needs a place to train however there are already many negative impacts in the methow valley and north cascades region from military operations. This is not the region in which to expand training flights. My family and I, and our neighbors, have to experience very loud noise from what feels like extremely low flying aircraft and some of the loudest in the Navy inventory - the 18G Growler. The noise is often not limited to day time and even when it is that is still very disruptive as many of us work and spend much of our time outdoors in the methow valley year round. I have been woken up in the morning from Growler aircraft noise and do not want to see the training range increased to further disturb more methow valley residents and wildlife.

According to the National Environmental Protection Act and Environmental Impact Statement (EIS) must be done when a major federal action like this is proposed. Has that statement been done? If so, I would like to review the reasonable range of alternatives proposed and our community should have a robust discussion of the significant environmental effects.

Noise is a major issue here. The methow valley is already subject to major noise impacts from numerous existing Naval operations which allow flights as low as 300 feet above the valley floor. The proposed expansion will add significantly to noise effects. Cumulative impacts should be analyzed in an EIS.

Thank you for the opportunity to comment. I hope the Navy will not proceed with establishing a new military training space with the proposed Okanogan D MOA.

Thank you,  
Shannon Campion  
resident, Twisp, WA

To whom it may concern,

Please find below a list of comments for submission following the review of the Draft EA:

- Regarding noise exposure, studies show that the annual-average DNL metric can obscure the number of individual noise events and is not always highly correlated with (or representative of) community noise complaints. In addition to the DNL cumulative metric, why is the number of expected noise events not indicated in the Draft EA?
- Many international standards and health organizations (see ISO, WHO community noise guidelines), as well as the FAA (see the Neighborhood Environmental Survey), have indicated that a) the use of the 65 dB DNL threshold for permissible exposure and community health and well-being impacts substantially underestimates these impacts, despite being the current standard used by the Navy, b) the associated FICON curve is not representative of modern communities annoyance response to military aircraft noise, and c) adverse health risks begin at 45 dB DNL, which is within the range of exposure predicted by the proposed expansion. The predicted DNL levels, while "lower than historic averages", still extend into the range that the WHO deems as posing a risk of adverse health effects over time. Why are these impacts and exposure-response relationships ignored by the Draft EA?
- The exclusive use of A frequency-weighting underestimates the contribution of low-frequency growler noise to measurements, as well as the spatial extent of noise exposure, and has been criticized as inadequate to quantify such low-frequency noise (see Berglund et al. 1996). Studies show that substantial low-frequency noise can elicit a more rapid increase in perceived loudness, sleep disturbance, and annoyance, and C-weighted measurements of noise can be more closely correlated to these effects (see Vos and Houben 2022). The WHO and ISO suggest that guidelines for permissible exposure should be lowered for low-frequency noise (see community noise guidelines). A common response is that A-weighting is designed for human hearing and should be more accurate — but this is only true at low to moderate levels of exposure. Why does the Draft EA not mention these details, and fail to quantify predicted noise exposure with C-weighted measurements?
- The Draft EA states that noise will remain "consistent" with current conditions, with average sound levels not substantially changing across the entire operational area. However, according to the Draft EA changes in cumulative average levels are modeled to increase by up to 15 dB in the area of proposed expansion specifically. The Final EA should make this more explicit to the reader and public — there *will* be a change in the acoustic environment compared to the baseline in the area of proposed expansion.

- The proposed action would affect individuals living within the MOA, particularly those in the community of Mazama on the outskirts of Winthrop, as well as non-residents recreating in the area. The affected population should be quantified and highlighted in the Final EA.
- The cost of disrupting the tranquility of a previously pristine (or at least minimally disturbed) soundscape should be taken into account. This clearly suggests that noise will not remain "consistent" in the region, as well as the precedent for progressive encroachment on protected areas (such as the Okanogan-Wenatchee NF). These implications should be given due consideration and explicitly discussed in the Final EA.

Thank you for your consideration of these public comments in preparation of the Final EA.

Sincerely,

Gio Jacuzzi (he/him)

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
James McKeever

This is my comment on the Navy's request to expand overflight areas in the upper Methow Valley for military training.

- I oppose this expansion.
- As I understand it, the expansion does not allow for more flights, but it expands the flights over a broader area. If so, it would not increase training effectiveness it would just impact more people and more wildlife.
- Training flights are already allowed as close as 300 feet from the ground in the current permit, this is way too low and actually has been seen to allow aircraft to go under ground based parachute gliders.
- The Navy has made assertions to the effect that there will be no noise increase and that people won't notice a difference. These statements are biased in favor of the Navy acquiring this permit expansion and are unsupported by any independent analysis.
- At a minimum, an independent analysis of many Navy assertions needs to be done.

Dear,

Dear U.S. Navy personnel,

As two caring and concerned people, my husband and I wish to submit the following comments on the Draft EA for the proposed Eastern Washington Airspace Extension.

1. The Draft EA inadequately analyzes impacts on Wilderness. For example:

Solitude and quiet are wilderness values identified and protected by Congress, but are not analyzed. Jet noise may not cause human hearing loss on the ground (which the EA mentioned), but it will shatter solitude.

Dismissing noise impacts on human visitors because most jets would fly Monday through Friday is inadequate. It assumes that people only come to visit Wilderness on the weekends. Those who visit during the week often do so to maximize their opportunities for solitude and silence.

Wilderness is also for wildlife. These areas were set aside to provide for their security and well-being. The sounds from military aircraft will certainly disrupt their behavior and cause unneeded stress. Give them a break!

2. The No Action Alternative is the best choice in this Draft EA.

3. A full environmental impact statement (EIS) must be conducted, if this project moves ahead, to identify and fully analyze all the impacts from the proposal, including those to designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be re-drawn to eliminate all overlap with designated Wildernesses.

WILDERNESS IS WHERE SOLITUDE AND SILENCE ARE FOUND. WE we understand the need for Navy pilots to be adequately trained, we shouldn't have to sacrifice our wilderness heritage to do so. PLEASE DO NOT SACRIFEC OUR WILDERNESS BY FOLLOWING THE RECOMMENDATIONS NOTED ABOVE. THIS IS THE HEALTHY, RIGHT, FAIR, JUST, HUMANE ACTION TO TAKE!

Thank you.

Sincerely,  
Mary Ann and Frank Graffagnino  
8420 S Calle de Bardo

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Please work to achieve a balance between these competing needs.

Sincerely,  
Kathy Mallalieu

To Navy Training Operation,  
Your operations here affect the health and welfare of all that live here.  
The noise levels may not damage hearing.  
They stress everything living here.  
Your expansion and the level of the flight deck you're proposing will impact it even more.  
The natural environment is already stressed from recent fires leaving less cover for all inhabitants.  
I encourage less, not more intrusion on this sensitive environment.  
Sincerely,  
Ain Whistler  
Methow Valley Resident.

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,

**VIA ELECTRONIC AND FIRST CLASS MAIL**  
**February 22, 2024**

Greetings:

The purpose of this communication is to comment on the Draft Environmental Assessment for Eastern Washington Airspace Extension, dated January 2024 (referred to in these comments as the "EA").

Our family home is in Mazama, Washington and we live in our Mazama home full-time. I have lived in Okanogan County at various times since 1973, both in the Methow and Okanogan Valleys. Our home is below the proposed Mazama Air Traffic Control Assigned Airspace ("ATCAA") and Okanogan D MOA, as described in the EA. Because we live in Mazama full-time, and are outdoors working on our forestland, gardens, and meadows, we are aware of aviation overflight noise around Mazama, and also in other parts of Okanogan and Chelan Counties. This is because of traveling in the two counties to work on community projects, enjoy outdoor recreation, and to receive some medical and dental care. Being full time in Mazama, and often in other parts of Okanogan County and in Chelan Counties, we hear aviation and traffic noise from various sources, and we see aviation overflight, particularly in the areas that the EA designates as the Okanogan A and B MOAs.

We understand that the EA evaluates a proposal by the Navy to extend a military operations area ("MOA") to the west of the existing operations area where the Navy has been conducting aircraft activities for decades. EA, pp. 3-42; 3-49. We also understand that the Navy's proposal, evaluated in the EA, does not propose to increase Navy flights in the existing Eastern Washington Airspace above Okanogan and adjoining counties, but to instead redistribute flights in that Airspace, if the proposed Mazama ATCAA above the Okanogan D MOA is approved. EA, p. 2-4. If the EA's preferred alternative can be implemented, the total number of Navy flights would be reduced slightly.

I am submitting these comments to support the preferred alternative proposed by the Navy in the EA to extend its military aviation operations into the Mazama ATCAA and Okanogan D MOA. I urge that this process under the National Environmental Policy Act ("NEPA") move to a conclusion confirming that the proposals analyzed in the draft EA can proceed to a final EA, and yield a finding of no significant impact to the environment, allowing the Navy to proceed with the preferred alternative described in the EA.

There are several reasons that lead me to support the Navy's proposal.

First, the EA thoroughly evaluates the Navy's proposed aviation operations, showing that they will have negligible or *de minimis* impacts to air quality, biological resources, public health and safety, and the socio-economics of Okanogan County. And also, the Navy's operations have improved, compared with the past when Navy flight missions were flown frequently at lower altitudes in a predecessor aircraft to the EA-18G. I believe the Navy's operations would improve even more with the preferred alternative's proposed flight redistribution described in the EA.

Second, those negligible impacts that may occur in our region as a result of Navy training flights are not a heavy burden for us as citizens who benefit from the Navy's readiness and mission of national defense. I am a military veteran who served in combat. I understand the criticality of effective training and operational readiness to maintain military skills. I do not wish to see members of today's American military deprived of the necessary opportunities for effective training. I support the goals of the Navy's mission described in the EA, recognizing they are vital to national security.

Third, by redistributing some Navy flights throughout the existing Eastern Washington Airspace, including to the proposed new operations area described in the preferred alternative of the EA, whatever impacts that occur would be distributed more evenly over the entire Eastern Washington Airspace, resulting in a reduction of overflight above some lower income communities like Twisp, Carlton, and Omak, and the western portion of the Colville Reservation, with some aviation overflight shifting to higher income and second home communities situated below the Mazama ATCAA, where in addition, population density is lower. This is an "environmental justice" consideration that supports the EA's proposed alternative.

Fourth, in the Mazama area, we already live with regular aviation noise impacts from helicopter flights for recreational heli-skiing and for wildfire suppression. Some heli-skiing is based in the Mazama area and in proximity to the Pasayten Wilderness. While I support heli-skiing as part of our local skiing and winter recreational economy, it would be short-sighted to support aviation noise impacts from winter recreation and tourism flights, but to oppose noise impacts associated with Naval aviation flight crew training for national security. Heli-skiing and other existing ambient noise in the Mazama area illustrate that tourism, outdoor recreation, and wildlife are currently co-existing with aviation noise. The Navy's proposal in the EA is unlikely to adversely affect outdoor recreation and tourism because any noise it adds will be of brief duration and infrequent. In addition to the aviation noise of heli-skiing activities in the winter and helicopter wildfire surveillance and suppression in the summer and fall, Mazama also experiences aviation overflight noise from commercial aircraft using the airspace above our community. As a result of the totality of this aviation activity, in addition to vehicular and motorcycle noise from bisecting Washington Highway 20, there are ambient sound levels below the proposed Okanogan D MOU and the Mazama ATCAA that already are higher than might be expected for an area proximate to a wilderness area.

Please add my name to the distribution list of your communications concerning the Eastern Washington Airspace Extension and the EA and related NEPA proceedings.

Sincerely,

Harry E. Grant

Dear,

To whom it may concern,

I am writing to provide my feedback on the Draft Environmental Assessment (EA) for the proposed Eastern Washington Airspace Extension.

1. The Draft EA fails to adequately address the impacts on Wilderness. For instance:

- Solitude and quiet are essential wilderness values that Congress has recognized and protected, but the Draft EA ignores them. Jet noise may not impair human hearing on the ground (as the EA mentions), but it will ruin the experience of solitude.

- The Draft EA's dismissal of noise impacts on human visitors based on the assumption that most jets would fly on weekdays is unacceptable. It implies that people only visit Wilderness on weekends. Many people choose to visit during the week precisely to enjoy more solitude and silence.

- Wilderness is also for wildlife. These areas were designated to ensure their survival and well-being. The noise from military aircraft will undoubtedly disturb their behavior and cause unnecessary stress. They deserve some peace!

2. The No Action Alternative is the most preferable option in this Draft EA.

3. A comprehensive environmental impact statement (EIS) must be prepared, if this project proceeds, to identify and fully analyze all the potential impacts from the proposal, including those on designated Wilderness.

4. The boundaries of all existing MOAs and ATCAAs should be revised to eliminate any overlap with designated Wildernesses.

I appreciate your attention and consideration.

Sincerely,  
Gary Gover  
300 Lincoln St  
Fairhope, AL 36532

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Brenda Collier  
8717 Corliss Ave N  
Seattle, WA 98103

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Marie Hoffman

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Maria Magana

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Amy Mower  
PO Box 2004  
Maple Falls, WA 98266

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Nelson Bell

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered: The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Joan Beldin

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

As a 100% disabled combat veteran I ask you to reconsider this disturbance of pristine Wilde areas that are part of my country's heritage.

Sincerely,  
Dennis Fisher

Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

I disagree completely with what WA Wild proposes but i cannot change any prefilled words above.

They have zero data for their position:

They have taken zero noise readings.

Their alarmist concerns are all vague and hypothetical and are arbitrary.

Sincerely,  
gene kopelson

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Barbara Blackwood

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Dear Navy Representative,

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered: The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct

impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,

Ava Ferguson  
520 Linden Road

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Julie Stohlman

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered: The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Edward Whitesell

**Subject:** [Non-DoD Source] Expansion of the Okanogan D MOA Could Harm Local Communities

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

The Methow Valley is a unique and wonderful place in WA that supports a rich and diverse ecosystem, outstanding recreational opportunities, peaceful surroundings and a treasured home and community. Please do not disrupt that sanctuary and beauty.

Sincerely,

Donna Crist  
10305 Ravenna Ave Ne  
Seattle, WA 98125

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Nancy Enz Lill  
1747 N West Point Rd  
Spokane, WA 99201

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

The wild life I see are sensitive to unusual sounds and activity. Their survival is dependent on this sensory alertness. Motorized intrusion in the wilderness is prohibited. Motorized intrusion over the area should be prohibited for the same reasons.

Sincerely,

Elizabeth Ormond  
4232 NE 203rd Pl  
Lake Forest Park, WA 98155

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

This area is special. It is pristine, uninhabited and it is quiet.

I've been visiting and recharging my soul in the upper Methow Valley with my family for over sixty years to find solace.

Please do not ruin the quiet that exists there.

Sincerely,  
Greg Armstrong

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Felicia Carroll

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,

Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Laura Davies

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Noise pollution must be acknowledged as a traumatic and disruptive human impact. A full EIS would explore the impacts of noise pollution, which will be one of the critical side effects of these exercises.

Sincerely,

Lydia Marshall

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Anne Roda

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The impact of noise pollution on wildlife is a grave concern, particularly in areas like the North Cascades which serve as strongholds for several endangered and threatened species. These species include salmon, steelhead and bull trout, northern spotted owls, marbled murrelets, Canada lynx, wolves, and grizzly bears. The proposed training and flights, which may occur within 2500 feet above the ground at higher elevations within the Okanogan D MOA, could significantly disrupt these animals' behavior and render their habitats inhospitable. This could have a devastating impact on their populations and the wider ecosystem.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

I urge you to consider the environmental impacts of all military activities for people and for the protection of our wildlife.

Sincerely,

Donna Snow  
2402 Woodfield Loop SE

**Subject:** [Non-DoD Source] Expansion of the Okanogan D MOA Could Harm Local Communities

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Gordon

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,  
Frank Stieber

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The proposed Okanogan D MOA could have significant impacts on the local communities of the Methow Valley, including Winthrop, Mazama, and Twisp. These rural communities depend on the roughly half a million outdoor enthusiasts who visit the Okanogan-Wenatchee National Forest each year to support their local economies. Therefore, the draft EIS should not only consider the direct impact on recreational opportunities but also the indirect impact that the proposed activities may have on the economic inputs to the local communities.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

Sincerely,

Dear Environmental Planner Katherine Jesser,

Dear Ms. Jesser

Thank you for the opportunity to comment on the Navy's Eastern Washington Airspace Extension Environmental Assessment for the Okanogan D Military Operation Area (MOA).

As an American, I understand and respect the need for our military to provide quality training to ensure our troops are prepared to defend our country. At the same time, I strongly believe it is possible to conduct appropriate training exercises without compromising the significant investments in environmental conservation made over the past few decades by the American public, U.S. Congress, federal agencies, and residents like me.

In its current form, the Navy's Environmental Assessment does not adequately address concerns about the potential negative impacts the proposed training area expansion may have on significant portions of federally designated Wilderness Areas, critical habitat for threatened and endangered species, world-class recreational opportunities, key drivers of the local economy, and the quality of life and safety for the communities that call the Methow Valley home. Because of these factors, I believe that this proposal is considered a major federal action, as such, a full Environmental Impact Statement (EIS) is required to be prepared under the National Environmental Policy Act (NEPA).

First and foremost, using Mean Sea Level (MSL) as the sole metric for determining the floor and upper limits for determining the impact of overflights is misleading. The high-elevation landscape characteristic of the Okanogan D MOA, with peaks reaching up to 9,000 ft, makes the vertical distance between potential aircraft flights and the ground much less than many flat lower-elevation areas in the existing MOAs.

Furthermore, in conducting an EIS, the following should be seriously considered:

The Pasayten and Lake Chelan/Sawtooth Wilderness Areas were designated under the Wilderness Act of 1964 and are provided with the highest level of federal protection. This is to ensure that the American people, both present and future generations, can enjoy the benefits of an enduring resource of wilderness. The concept of "wilderness character" is based on the idea that these areas should provide every American with recreational access to ecosystems that are free from modern human manipulation or impact. These areas should also provide opportunities for quiet solitude.

Thank you for your time and consideration. I know that together, we can maintain military readiness while safeguarding recreational access, fostering thriving fish and wildlife populations, and preserving healthy ecosystems, as well as supporting the economies and well-being of surrounding communities.

The impact of noise pollution on wildlife is also a grave concern as this area is home to several endangered and threatened species. The proposed training flights could significantly disrupt these animals' behavior and harm their habitat.

Sincerely,

Kaeli Fertal
