

PREFERRED ALTERNATIVE

PREFERRED ALTERNATIVE: TARGETED DREDGING AND DIVERS

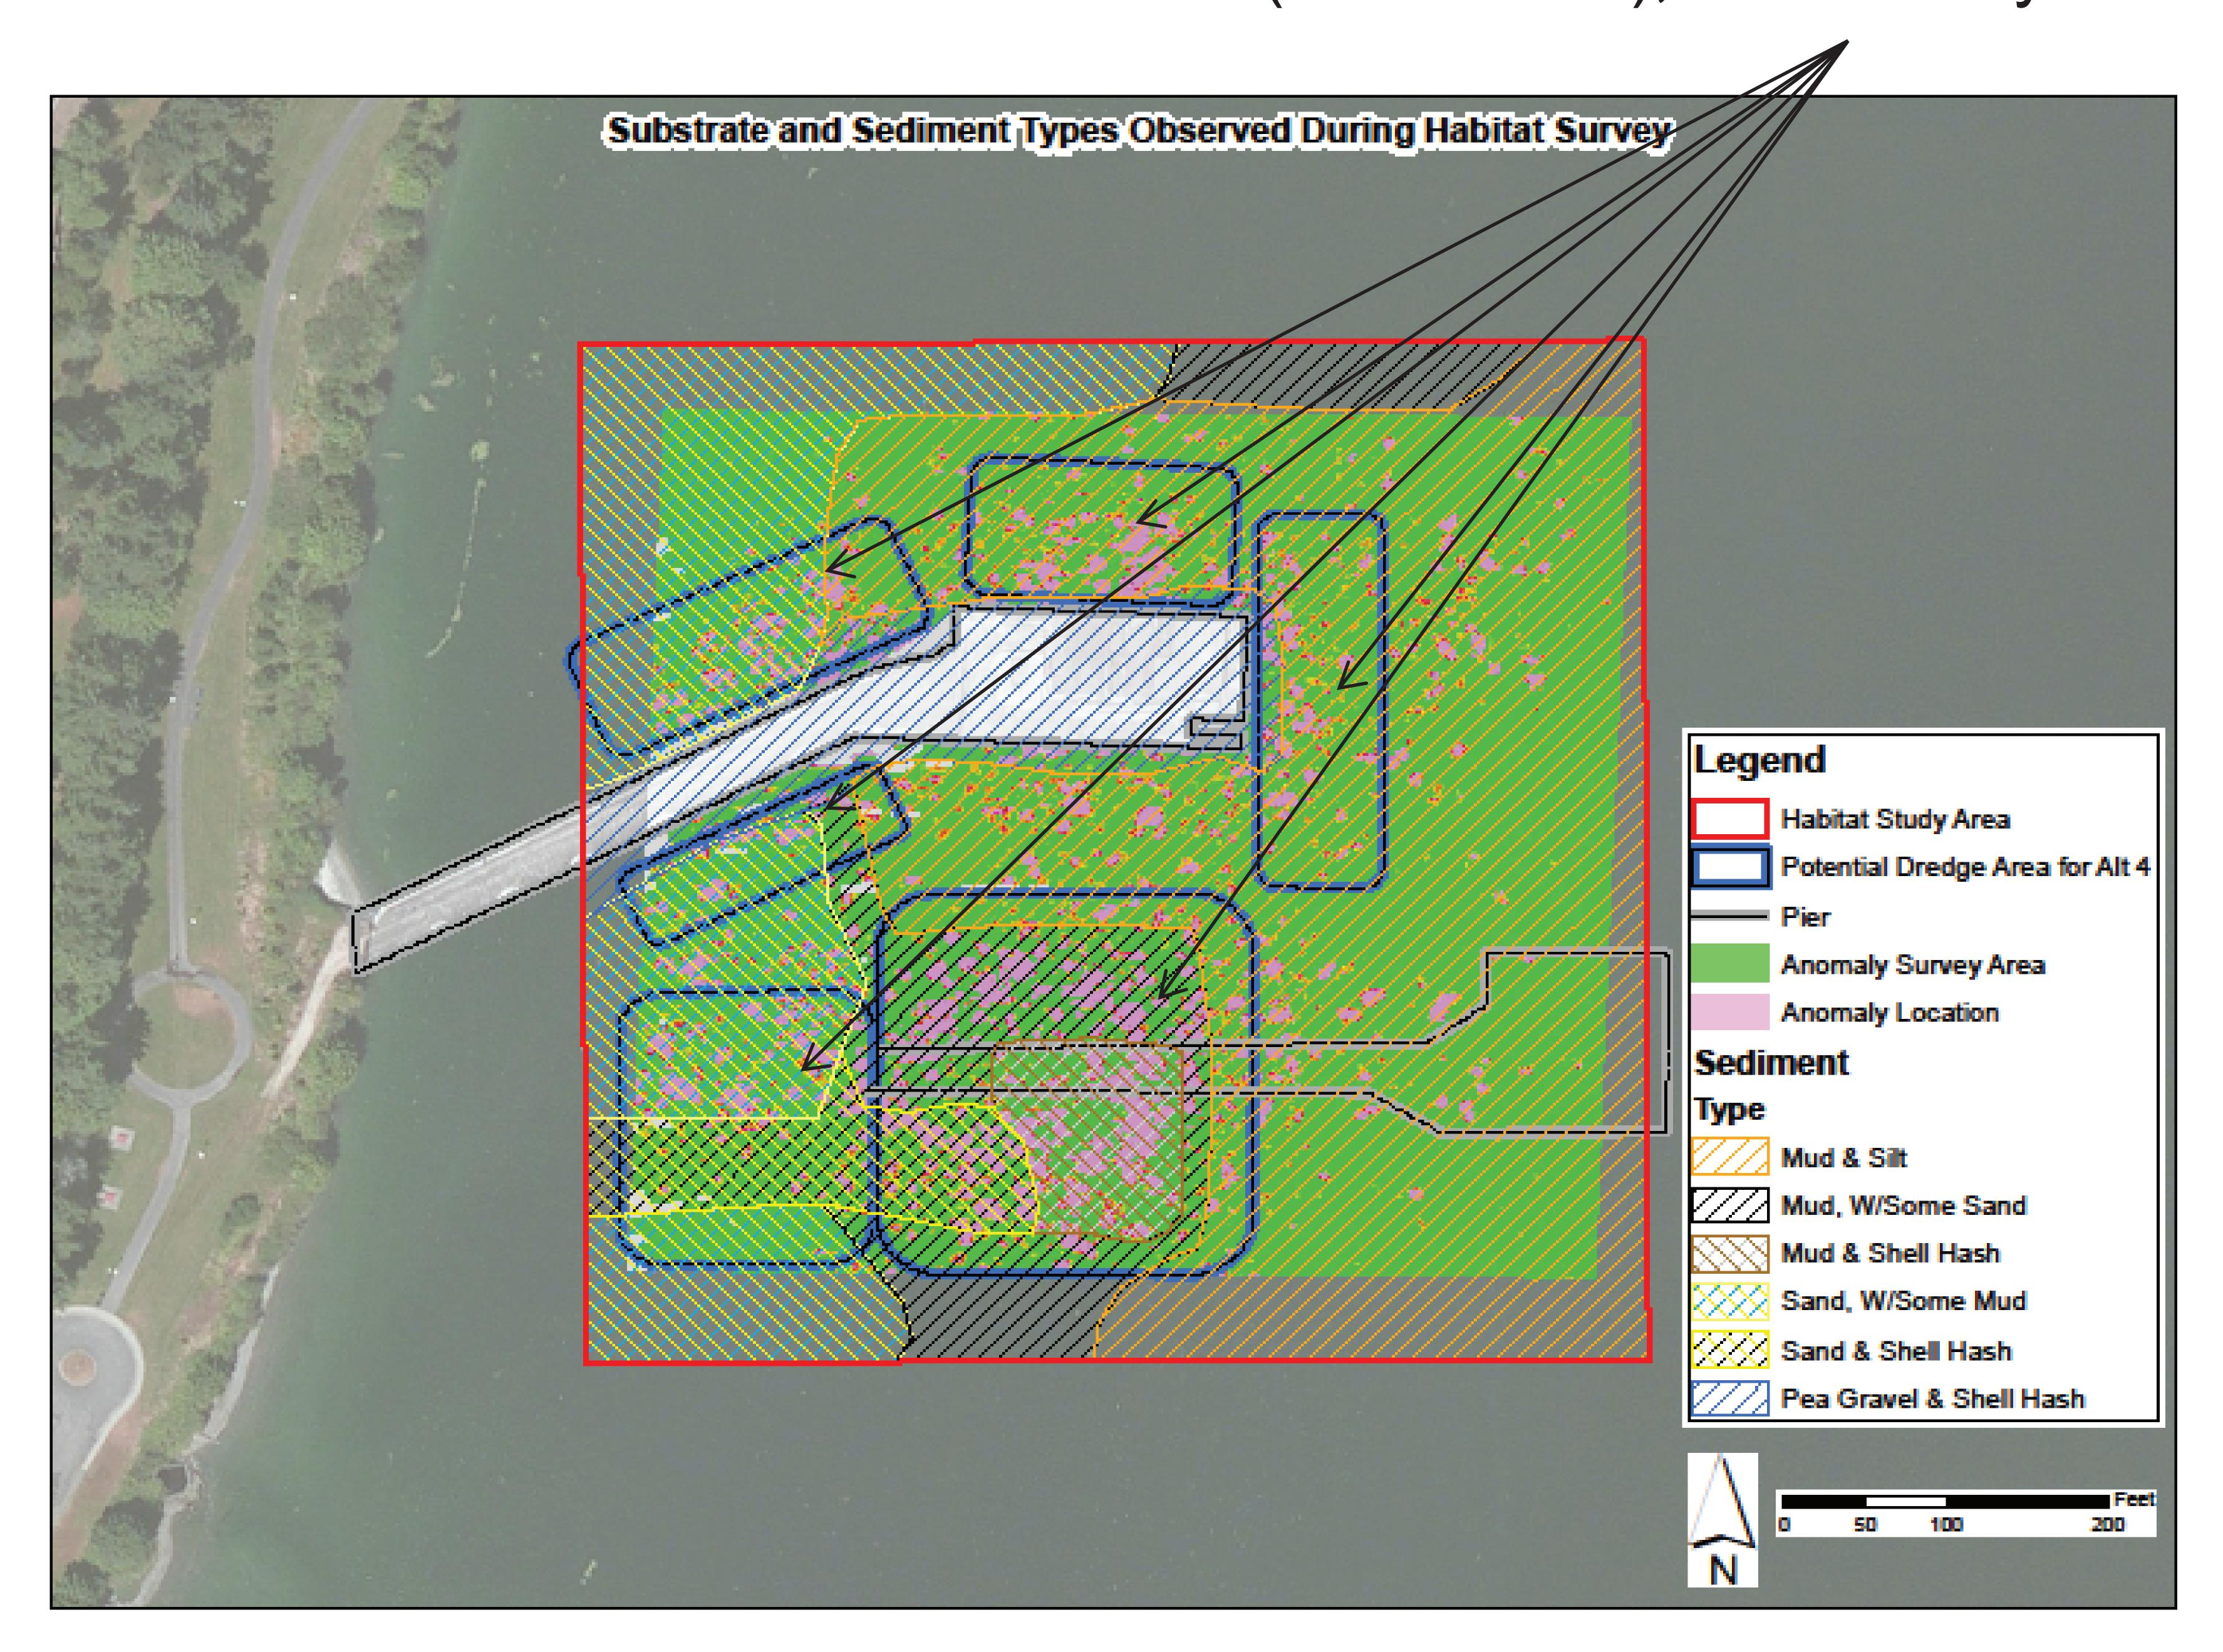

The Preferred Alternative is Alternative 4 which is comprised of three elements:

- targeted dredging to remove metals from areas saturated with metallic anomalies
- diver verification and inspection to ensure removal of DMM-HE from dredged areas
- diver investigation and removal from areas where discrete anomalies can be identified.

Alternative 4 is estimated to take 3 years to design and implement

Alternative 4:

 is the only alternative that includes treatment and meets the Remedial Action Objectives Targeted dredging in areas of high metal saturation (blue boxes), followed by diver verification

Diver investigations in less-saturated areas and under existing pier
